The American Stationer

A JOURNAL DEVOTED TO THE INTERESTS OF THE STATIONERY & FANCY GOODS TRADES

REDMAN & KENNY, N.Y.

"The Stationer"—Every Thursday—$2.00 Per Annum.

VOL. IX.---NO. 1. NEW YORK, JANUARY 6, 1881. WHOLE NO. 289.

Correspondence.

BOSTON NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

BOSTON, January 3, 1881.

The holiday week, just passed, has offered no new or special features in the stationery trade. The sales of the past year have been, according to all reports, unprecedented, and the failures few. The record is briefly summed up in the following statement: Booksellers, 2; paper manufacturers, 1; mucilage makers, 1; stationers, 3. The aggregate liabilities of the failures have been only inconsiderable. There was a book failure in the last week of the year, that of Wm. G. Colesworthy, Cornhill. Liabilities, $1,200. Stock sold to N. Little & Co. Pays thirty cents on the dollar.

The number of failures in Boston, of all kinds, in 1880, was 294. Aggregate liabilities, $3,169,278; aggregate assets, $1,465,848; average liabilities, $13,494; average assets, $5,294. Compared with the previous year, the failures have been small.

A few changes in the book trade are announced. The Heliotype Printing Company admitted Samuel D. Sargent and Ernest Edwards. James R. Osgood & Co., publishers, admit Thomas B. Ticknor in place of John H. Ammon, who retires. The future of this firm promises to be very brilliant, and with the accession of Mr. Ticknor the house is destined to become even more famous than did the old firm of J. R. Osgood years ago.

Among the art publishers I find that all of them, such has been the great demand for novelties in pasteboard and their great popularity, are already engaged in preparing new and unique designs for the next season. The popularity of Christmas cards, for instance, is demonstrated in the immense quantity that was sent through the post office here last week and delivered within the precincts of the city, the number reaching, so far as could be judged, some forty thousand.

The principal establishments for the sale of art novelties have been pretty well exhausted of their assortments. The same remark is also applicable to all the popular or desirable lines of stationery.

Dealers express themselves as well satisfied with the profits of business for the year just past. The books have been balanced and everything seems to be lovely. It is obvious that no department of trade is in a more healthy condition than the stationers'. Their goods are a prime necessity, and there are no ruinous practices in the trade.

A flying visit among the dealers on New Year's day—for, be it remembered, that Boston has not been educated up to the ratio of keeping New Year's—showed that stocks are in fair volume for the season. Not until the next season's trade, in the spring, will there be much of a movement, but only in an ordinary sort of way, such as is usually the case at this season of the year.

In my next letter I will endeavor to give you the ideas of the leading dealers respecting business, as it may appear to them, for the near future, bearing in mind the speculation in the leading money centres of the past six months, and how it may affect trade, if at all, in the next six months. It is safe to say, however, that a conservative feeling will prevail.

The holiday season has naturally brought East not a few gentlemen from the West engaged in the stationery trade on a visit to friends. Several of such expressed the opinion that business with them would be as good in 1881 as it has been in 1880.

The death of George Mudge, for many years connected with the well known paper firm of Rice, Kendall & Co., will be regretted by a large circle of friends and acquaintances. He went into the concern as an errand boy, and when he died he was its chief salesman and an important adviser.

L.

PHILADELPHIA NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

PHILADELPHIA, Pa., January 4, 1881.

Retail trade in our city is very active, and exceeds the most ambitious hopes. Fancy articles during the holidays sold with the most brilliant results, and Christmas and New Year cards were disposed of in much greater quantities than in preceding years. The stationery trade in staple articles is running smoothly and very satisfactorily. In one word, we are having an excellent business season, and although this was expected it is not the less welcome.

I ought to be able to tell you something of what the manufacturers are doing in anticipation of the spring season, but they are all still so busy with the winter trade that they have no time to work up new goods.

C. F. Rumpp and Langfeld, Turner & Andrews, who are so well known for the manufacture of leather goods, are all in the same boat, for they are working all of the hands they can put on to complete their back orders. It will certainly be a month yet before they can see the day, and perhaps not then, when they will be able to direct their attention to the spring business.

A. M. Collins, Son & Co. have still as much to do as if they were at the beginning of the season. Their glazed cards are selling so prodigiously that they are crowded to supply the demand for them.

Janentzky & Co. are doing a very brisk trade in artists' materials. Their standard rubber and eraser, double and single wedge shape, has had a very great success. This rubber is greatly preferred on account of its excellent quality. They have just put on the market a new article which they alone have the right to manufacture. It is the decorator's easel, which is indispensable for all persons who paint on china, pottery, &c. It is nicely made of japanned iron with brass attachments and adjustable hand rest, and permits articles for decoration to be placed at any angle at the option of the artist. The iron easel is firmly screwed in an iron base on a polished walnut table, and the hand rest is hinged to the latter. Any possibility of injury to the tint is avoided, and painting can be done with more safety and accuracy. Cups, saucers, vases, plaques, &c., can be firmly adjusted and held in any position until painting is completed. The price is quite low.

John Gladding & Son are happy to say that they are at the end of the most prosperous season—in fact, year—that they have ever had. Both in diaries and blank books their sales are far ahead of former years, and to-day they have not one single diary in their store, having sold completely out. They anticipate a good trade for the coming year, and are fully prepared to meet it.

A. J. Holman & Co. have admitted to the firm four sons of A. J. Holman. E. P. and W. A. Holman are practical book binders, understanding thoroughly all branches of the business. They, together with Geo. S. Lare, will attend to the manufacturing department. A. J. Holman, Jr., and J. N. Holman will attend to the matters connected with the sales department. The style of the firm remains unchanged.

Mr. Kimball, manager of the Philadelphia branch of L. Prang & Co., reports very brisk trade to wind up Christmas week. This, of course, was made up of city trade principally, where dealers could "piece out" by small lots. The demand lasted up to Christmas Eve, and the office was kept open a part of Christmas Day. Owing to lack of stock many orders were only partially filled. The very popular "horse-shoe," which the firm introduced as a birthday card, was at a late hour put into Christmas, and all that could be procured were sold within a few hours. Mr. Kimball will remain in charge dur-

ing 1881, and he extends a cordial invitation to his customer friends to call in. He is in daily expectation of his samples of valentines, and speaks in great praise of their beauty.

Matthews & Co. had a great success with their line of engraved and illuminated New Year cards. They were obliged to stop accepting orders ten days before New Year's, as they had by that time as many orders as they could fill. The sales of engraved cards exceeded 100,000, and they could have sold many more if they had commenced their publication earlier. Their Dickens calendar has far exceeded the sales of last year. They still desire a few agents in the Southern cities, and our Southern friends would do well to communicate with them on the subject of controlling their territory.

J. VIENNOT.

CINCINNATI NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

CINCINNATI, January 3, 1881.

Eighteen eighty-one is a little difficult to write after a year's drill in writing 1880. But another turn in the rapidly rotating wheels of time has brought his chariot to milestone 1881; and as he won't stop to give us a rest, we must acquiesce and set about, waiting and watching, to make a record of the dust he makes and of the incidents and events that will attend his journey to the next milestone.

Cold, bitter cold, came before Christmas, and began to depart about New Year's eve. Anticipations, such as were reasonable, were not disappointed. Of Christmas cards the sales were immense. Peter Thompson laid in a courageous stock of the fringed cards; ran out of them early, and then telegraphed in vain for more to every possible source of supply in the United States. The stock of Christmas cards was thought to be hazardously large, but the event proved in nearly every instance that it was too small and required replenishing.

John Holland has had a magnificent local trade in gold pens, pencils, charms, and all the brilliant beauties in his line. His traveling man, W. W. Lankaster, has been back from the East, and has just gone East again. His reports of sales and of the reception the goods he offers receive, are of a nature to excite the pride of a citizen of Cincinnati as well as to gladden and cheer the heart of his principal.

There has been a fortnight's lull in visitations from the trade elsewhere. Among the harbingers of the host who will precede the swallows of spring many weeks are B. A. Stone, of Philadelphia, and Mr. Smith, of Charles Arms, Deerfield, Mass. Both are in the pocket book, &c., trade. They have heard of the great wheat and corn crop of the West—so great, that all the rolling stock of all the great railways is inadequate to carry it to the eastern ocean line of this country and set it journeying across the sea to bread the British as rapidly as it would like to go. They have heard how money is coming over the sea to this favored land in greater sums than it is going out. The rational inference is that people will want pocket books to carry this money in, and here they are, in anticipation of the demand, providing the article in all styles and varieties.

The lithographic firm of Gibson & Co., doing business in Cincinnati and in Duane street, New York, has dissolved partnership. The members of the old firm were Stephen Gibson, Robert H. Gibson and George Gibson. The dissolution is by mutual consent. Robert H. Gibson will settle the business. George Gibson and Charles A. Dodson, an employee of the late firm, have formed a partnership under the title of G. Gibson & Co.

Paper manufacturers and wholesale dealers represent the outlook for business exceedingly cheerful.

PRINCE WILLIAM.

OHIO NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

DAYTON, O., January 1, 1881.

This is the first time I have written the above date. It reads forwards and backwards the same. When we write January 1, 1882, will the old year look backward to what we now anticipate it will look forward to?

I wonder if all the high hopes held to day will be realized—but a time to moralizing—and down to business again.

I have delayed my letter several days in order to give a little résumé of trade for 1880 among the stationers. I have taken pains to interview them about all in regard to their last year's business, and one unvarying answer I received from all—"Never had so good a trade."

I thought that a few interviews with some of our dealers as to what goods met with ready sale and what did not might be of interest to the trade at large, and might bring out reports in the same line from other points.

Jas. Richey reports a large sale of pictures, sets of fine books, Christmas cards, photo and autograph albums, the better grade of goods meeting with the readiest sale.

John H. Thomas reports about the same experience.

G. W. Holden did not carry a miscellaneous stock of books; but only standard publications which found ready sale. The various editions of Chatterbox and toy books, Christmas cards, fine papeteries, they sold large amounts of. In velvet and ebony frames their report is not so favorable.

H. Janning, who makes a specialty of Catholic publications, &c., reports a large trade in the various prayer books, &c., of his church; but that picture frames, and goods in that line, were rather slow. Last year he says that the reverse was just the case. He thinks it a good idea to avoid buying all goods that were popular at the preceding holidays.

Sullivan & Hammond report a large trade in small goods, pocket books, papeteries, auto-albums, games, toy books, French tissues, lamp shades, &c. Their December trade was largely in excess of last year.

H. E. Mead & Co. report 1880 as the best year they have had. They confine themselves to wrapping papers, &c.

R. A. Rogers & Co., who handle stationery at wholesale only, report their fall trade as largely in excess of last year. In their manufacturing department their sales of paper plates and oyster buckets have been very large.

Odell & Mayer are running to their full capacity on their specialty of county blank work. They are headquarters for the finest binding in the West.

W. D. Beckham, of the *Daily Journal*, must be prosperous, as he had a standing appeal in his columns for any one to whom he is indebted to come at once and get his money.

I expect some of these parties may be disposed to deny that any one has interviewed them; but the deed was done nevertheless.

The writer would especially notice the very large sales of fine papeteries. The beautiful styles gotten out this season, no doubt, aided this result.

Among the recent institutions of our city, one of the most prosperous is the "Ladies' Decorative Society." A few months ago a few energetic ladies, devoted to art and culture, conceived the idea of forming an association with the above title and character, and to establish it on a paying basis pecuniarly. They were laughed at by "wise" business men, among whom was the writer. They went ahead, however, employed Isaac Broome, of Trenton, N. J., as director; built two kilns, and expect soon to leave Haviland in the shade.

The school board has established night drawing schools, under Mr. Broome's charge, that are being attended by scholars from fourteen to sixty years of age. The demand for pencils, &c., has been largely increased by this means.

The winter thus far has been the most severe ever known, and outdoor work has been suspended in all branches. This will make trade dull temporarily.

Work in all the new mills has of course stopped, but we look for warmer weather soon throughout the

MIAMI VALLEY.

DOMINION NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

TORONTO, December 31, 1880.

The close of our old year is very suggestive, and among the many things that are sure to press upon the mind at such a time is the even and triumphal march of Time. There is no parade, no "spirit-stirring drum," nor "ear-piercing fife," nor "royal banner," but still it moves on unchecked and unopposed. We come into the world with never a word as to our wish in the matter, and we are pushed through it whether we will or no; and when the last sands of another year are falling, as at this moment, one's thoughts run back, involuntarily tarrying now and then on the way, to disport in the sunshine of pleasant hours, or drop a tear now and then over the scattered graves of many a buried hope. But we go on weaving the web of life and Time's shuttle flies back and forth through the warp, leaving a dark weft now and a light one then, until the piece is done, and then it will be folded up and put aside forever. Whatever the year that is now about finished has brought to us individually—and I hope it has been a happy and prosperous one to all in any way connected with THE AMERICAN STATIONER,—looking at it from a commercial standpoint, it has been one of continued and progressive revival. A year ago the tide had turned, and though there were many then who had not far to look to find disaster and ruin, yet the times were mending and some began to feel that we were entering on another decade of prosperity. In this respect the old year has been a remarkable one with us, and we take leave of it we trust with genuine thankfulness for the prosperity and abundance it brought, and turn cheerfully to greet the new year.

I fall in with your remarks respecting Christmas cards. There is not one card in a hundred of those issued by the best publishers really appropriate to the season. There may be differences of opinion on this subject, as no doubt there are; but it seems to me that there is a fitness of things, and that those tokens which are designed to give expression to kindly feelings and good wishes at a season of the year when thoughts are turned to the time when the announcement was made, more than eighteen hundred years ago, "On earth peace, good will towards men," should have some reference to this and the scenes we are accustomed to during the festivities of the holidays. Very few of the thousands of cards seen on the counters of the book-

sellers just now have any reference to this. Even Prang, who has a world-wide reputation for the beauty and artistic merit of his cards, does not seem to have discerned in the rugged scenery of our northern country in winter, or the happy homes and cheerful firesides in city and beyond it anything worth portraying. The semi-nude figures of De La Rue, if not actually fringing on the borders of good taste, are, to say the least of it, not pleasant to look at when the temperature is hovering unpleasantly near zero and one's thoughts run more to heavy wraps than gossamer robes. The cards which have taken the best (I am speaking of the more expensive kinds) were those produced by our own artists. Many of these were very pretty and mostly represented well known Canadian scenes or familiar native flowers. Nor was the sale of these confined to our own people: large numbers were sent to different parts of the United States and England.

The holiday trade in the city, and indeed I may say throughout the country, has surpassed anything we have ever had. The booksellers and fancy goods dealers never had such a rush of customers; and notwithstanding the fears entertained by some early in the year that there would be a falling off in the Christmas card business, I am safe in saying, I think, that the sales are easily double last year. The quantities that have gone through the post have been enormous, and the poor postmen, judging from the loads I have seen them carrying, will be heartily glad that it is over with for another year.

No person who feels any interest in the development of Canadian art can look over Hart & Rawlinson's stock of holiday publications without pride and pleasure. This firm is the recognized exponent of artistic culture in the Dominion so far as books are concerned, and I would be very much pleased to know that its energy and enterprise are being substantially encouraged by the art-loving public. I have previously noticed its booklets and other special goods, and also the embellishment with hand-painted illustrations in oil, water colors, india ink, or sepia, by resident artists, embracing a wonderful variety of subjects, the artistic work in every case being such as would do credit to the oldest art centres of the world. The best proof of this statement is the fact that these booklets, &c., are in active demand in London and New York, and the publishers are in constant receipt of orders from those cities. I inclose you one of the firm's catalogues, to give you a better idea of what it is doing.

Your correspondent, in his desire to cater something that may be of interest to your readers and be of use to those whom he may mention from time to time, does not always meet with encouraging responses. I called yesterday on one of our leading booksellers and asked if he had anything new to give me, and the answer I got was, "Oh, we are moving on in our usual quiet way; we never go in much for *puffin!*" I said, "Good morning," and left. Now, the fact is, the contrary statement notwithstanding, that my friends like to be puffed as well as anybody else; but, like some other folk I know, they seem to think that we have nothing else to do but run until they are in the humor to break through their reticence and impart information that is likely to prove of more use to them than the receiver.

In conclusion, I wish the staff of THE AMERICAN STATIONER in general the compliments of the season and many happy returns, and in particular to the typo who has had the misfortune to set up and dress up my scribbles. I hope his eyes have not grown crooked over them, nor the task so onerous that it has afflicted either his temper or digestion, and that his New Year's dinner may sit comfortably under his waistcoat.

C. H.

OUR LONDON LETTER.

[FROM OUR REGULAR CORRESPONDENT].

5 LUDGATE CIRCUS BUILDINGS,
LONDON, E. C., December 18, 1880.

The stationery trade is as busy as a bee just now with goods for presents, &c., and without any further preface I will give your readers some ideas as to what is going on here.

Among a few choice specimens of work from De La Rue & Co., I must notice the two series Nos. 305 and 308, each depicting female beauty, the former being a full length figure of a girl, and the latter a pretty head, marked by all the usual perfection of color of this firm. This latter design is reproduced upon satin, with, if any thing, greater effect. In No. 306 we see a grotesque subject treated, and No. 318 reveals a girl wheeling Father Christmas over the snow. No. 320 is a real winter scene—a sleigh, with its occupants—and in every way suggestive of the season and its enjoyments. Nos. 328 and 332 are domestic subjects, and reflective of the feelings which animate us at the festive and enjoyable season of Christmas. The whole of these cards are exceedingly well able to represent the great firm who issue them. It seems almost ridiculous for me to criticise De La Rue's goods. They do not need it. They are as well known to you as to us here, and I will merely state what they are doing, and you will all know how they are doing. Their almanacs and pocket calendars are capital things, too. They are neat, compact, and ornamental, in all sizes, in all designs. Send for a few samples and you will see how useful they are.

Of all the books suitable for Christmas or New Year's gifts which are likely to appear this year, I venture to think that few will surpass in artistic merit, and at the same time in practical use, the "Picturesque Album," published by Bradbury, Wilkinson & Co., London, E. C. The spaces in this portrait album not occupied by the openings for photographs, are filled with fifty of the most charming etchings, executed by a gentleman bearing a name well known as a master of this art. They are, of course, printed from steel plates, and now that etchings are beginning to be more appreciated by those outside the limited circle of comoisseurs, I cannot but believe that this superb album must command a large sale. How difficult it is to find a present for a friend, at once handsome, artistic and useful, without being too costly, and this book certainly fulfills all these conditions. These qualities considered, it is offered at a very moderate price. The bindings are most choice and unique, with the new nickel spring clasp and silver monograms, if wanted.

Chas. Goodall & Son have just brought out a combination whist and cribbage marker, and to all card players this useful amplification of the Camden whist marker will be a boon and a great convenience. It is easy to mark a game of cribbage by means of a neat ivory scale, with pegs to mark units and tens. The ivory spring lids are to tell the short game of whist, broad tellers marking the single points and narrow ones the total. The marker is beautifully got up in highly finished walnut and ivory, and is at once good to look at and to use. Apply to Chas. Goodall & Son, Camden Town, and St. Bride street, London, E. C.

Accidents happen, so it is stated, in the best regulated families, and Chas. Letts & Co., Royal Exchange, E. C., have issued a very useful little box, happily called the Domestic Hospital Box, with a view of providing a ready and needful aid in all cases of accident. The box contains lint, linen bandages, cotton wool, court and adhesive plasters, and a roll of india rubber tissue, also tape and cotton, thereby providing, in a small compass and for a small price (2s. 6d.), a little household surgery.

Handsome and artistic are the two attributes of E. Hamilton's series of illuminated texts. The texts are well chosen, and the letterpress, in rustic letter and gracefully relieved by delicate foliage, is most chaste. I have never seen any work superior to Mr. Hamilton's. It combines goodness with taste, and whilst gaudiness is absent there is a certain richness of effect in all his designs. I have in the specimens Mr. Hamilton has kindly sent me, one text mounted, which looks really fascinating in the qualities I have attempted to describe above. I certainly think that these choice specimens of art are well worth looking after. Apply to E. Hamilton, 7 Bath street, Bath.

I have received from Marr, Downie & Co., Glasgow, an assortment of their special lines. First of all comes a sixpenny packet of curl papers, very useful, indeed. Next comes a great —an endless—variety of little memo. books, of all sizes, bindings and finish. Some are stiff, others, limp—all neat and good stock, however. I don't know how many sorts of little books the firm make, but I may safely say they have a hundred varieties. Among these let me call attention to the following: No. 141, a crown 18mo size, 4¾x3¼, in full American cloth. This will fit the vest pocket admirably. Nos. 7,306, 7,307 and 7,308, good, substantial value for the small price. No. 85, post 8vo ledgers in full leatherette, turned in, blocked, and lettered on side. This series is made of superfine, cream-laid paper, ruled faint, and faint and red, and may be had interleaved with blotting if wished. Another most useful series of books is the "Where is it?" series. These little books are made of superfine cream-laid paper, ruled faint, and interleaved throughout. The sizes are fcap., small and large post 18mo, also in fcap. and post 8vo. One series, No. 500, is in French morocco, gilt filleted and lettered. These books can be used daily by all business men, and will be valued as friends of order and methodical habits. Account books of all kinds, in all varieties of binding, are a great speciality of Marr, Downie & Co. It would be scarcely needful to name all, but if I instance No. 6,189—a day-book —as a specimen of work, it will do the firm every justice. All kinds of exercise, writing, copying, and such like books are made by the firm, too, in great variety, the object being always to combine cheapness and quality as closely as possible. Copying books—very useful in the office—of 250, 500, 750, and 1,000 pages, are a feature, and are made of good paper, for their particular purpose. There is a capital catalogue published by the firm, and all applications for this, the best guide to the products of this excellent house, will be attended to by addressing 29 East Ingram street, Glasgow.

Special attention has evidently been paid by George Carlyle, Hanover street, Liverpool, to the papers which constitute the useful combination known as a manifold writer. Not only is Mr. Carlyle well known for excellent carbonic paper, but he has of late produced some equally good copying paper, which is of even surface, allowing the stylus to glide over it with ease and rapidity, but holes and tears are so rare as to verge upon the impossible. I have used Mr. Carlyle's manifold books for some time, indeed

ever since I saw them, and I give my experience for your guidance. Oiled royal is also a feature with Mr. Carlyle. His paper is stout and strong, and in every way reflective of the care and skill bestowed on its special preparation. These goods are really very genuine, and I can commend them heartily.

To meet the wishes of several of their friends, the celebrated firm of John Dickinson & Co., Old Bailey, E. C., has commenced to put up its ivory visiting cards into boxes, containing one pack of fifty. The cards themselves are justly well known, and I cannot add one word of praise which could in any way increase the repute of the manufactures of the Old Bailey firm; but the way in which John Dickinson & Co. have carried out their project is worthy of praise. Very neat labels, and very strong cardboard boxes, easily opened, yet perfectly tight, give the new feature the same exterior value as the contents of each box themselves present. I have received two qualities—viz., thin and thick ivory cards,—and as the boxes keep the cards clean, and indeed serve as excellent cases for the pocket I think that these cards are well worthy of attention.

I lately saw a new album, the novelty of the well known firm of Charles Reynolds & Co., 27 Milk street, E. C. It is a very handsome book in all respects. As its name implies, the "Mikado" album is illustrated profusely with original Japanese designs in good and effective colors The "Mikado" is arranged to hold carte de visite and cabinet photographs, and is bound in morocco, russia and calf, with emblematical and other designs on the covers. It is fitted with a lock, if necessary, and finished with all the perfection of detail that characterizes all the goods of the Milk street firm.

If I say that John Walker & Co. are the most enterprising house in the trade, I don't think anybody would feel offended. There is always an attraction at 96 Farringdon street, E. C., or one shortly coming. A glance over this prosperous establishment revealed to me many excellent lines of stock. In account books there is much to attract. The set of five, 1s., 2s. 6d., 5s., 10s. 6d. and 21s., is a capital investment. Good paper, good ruling, and good binding. Note books are a great specialty of John Walker & Co. The new "City" series is a choice article, compact, novel and attractive, and most useful. Another variety, containing a small stock of menu papers, perforated at the top for separation, is an excellent line. Several neat little novelties in stationery sundries have been issued by this firm. Olive wood goods in great variety; Vienna inks—one and two bottles—and elegant nickel-silver mounts; letter clips, and a full line of good substantial leather goods, form a most inviting display to the buyer who requires a sure and safe stock for his counter. In the paper department, one specially well regulated both for quantity and quality, I saw many good ideas. The two-quire packets of bill paper, long and broad folio, are very useful. These packets, 6d. and 1s., contain sheets of ruled account paper, and are always ready for making out a long account. The "Perfection" blotting pad does not belie its name. It is a neat packet of good blotting paper in four colors, each sheet being stamped, and suitable for a writing desk or table. No jagged edges and no slovenly appearance can exist in the use of this capital blotter. Another splendid novelty of this house are the ivory Christmas cards. A thin and perfect sheet of ivory, with a delicate and appropriate design, painted skillfully, and in chaste colors upon it, gives but a mere shadow of an idea of the charm and attraction of these new goods. The ivory cards themselves bear no printed inscription. They are merely within a folded card of a pale yellow tint, and upon the back of these covers is the motto for Christmas or the New Year, the whole being safely enclosed in a small box of tasteful finish. The absence of anything in print upon the little ornamental tablet is a good feature, and converts the ivory card into a present suitable for all occasions. The designs are principally floral, and for distinct and real artistic grouping and tint, are, to my mind, the best productions of all the available talent of the day. They are delicate and, indeed, to use a by no means exaggerated term, they are a real luxury. I hope to see as much talent and skill expended upon a winter scene, and then such a Christmass card will have no equal.

To render the stylographic pen a more perfect and generally useful article, Bradbury, Wilkinson & Co. have issued a special ink, and having found it work very well, and not so liable to clog the delicate machinery of the stylographic pens as other inks, I strongly recommend the trade to apply to the above firm, Farringdou street, E. C., as the ink will suit any pen.

And now let me wish your trade a merry Xmas and a very happy and prosperous New Year. I hope the same enterprise and success may ever attend you, and may 1881 be a better, brighter year than the one about to close. Wishing THE STATIONER, too, a good time, I will conclude. W. F. C.

OBITUARY.

GEORGE W. MUDGE.

George Warren Mudge, for many years a trusted and popular salesman in the paper warehouse of Rice, Kendall & Co., Boston, died at Jamaica Plain, ou Sunday, December 26. Mr. Mudge was a native of Boston and a graduate of her public schools, to whose excellence he always bore testimony. Soon after leaving school he entered the establishment of Rice, Kendall & Co., and gradually rose from the place of errand boy to the headship of one of the most important departments of their business. In this connection he became widely known to the paper trade, and highly esteemed by all who had to do with him. Upright in all his dealings, thoroughly informed in his business and of agreeable manners, his customers invariably became his personal friends, and few men will be more widely missed or their death more universally lamented. In the society in which he mingled and in his home his loss will be almost irreparable. He was a prominent and active member of the Baptist Church at Jamaica Plain, where he had for several years past resided, and was the centre of strength and cheerfulness in the domestic circle. In every sense he was a good and useful citizen, and an agreeable companion, and his memory will be warmly cheerished by all who knew him.

MOSAIC DECORATION.—The art of representing various outlines and patterns by means of small fragments of different colored minerals or artificial substances is one of very ancient date. What is now termed "mosaic work" was known and practiced in Assyria and Babylon, as also in Egypt, and attained to high perfection among the Greeks and Romans. This ancient art was much used by the early Christians, and after falling somewhat into disuse in the dark ages, was revived in Italy at the end of the sixteenth century. The decoration of the dome of St. Peter's gave a fresh impetus to Roman mosaic workers, and a school was established for instruction in the art, which still survives, and is known as the "Fabrica."

CHANGING COLORS.

The double iodides of silver and mercury, and of copper and mercury, are perhaps the most remarkable known for their changes of color when exposed to the moderate changes of temperature. The first is prepared by adding a solution of nitrate of silver to one of iodide of mercury, dissolved in one of iodide of potassium. The resulting precipitate has a lemon-yellow color, which becomes at once a deep orange when gently warmed, returning again to a bright yellow on cooling.

The copper-mercury iodide, which is still more remarkable, is prepared by adding to a warm solution of iodide of mercury and iodide of potassium some sulphate of copper and then sulphurous acid. The precipitate is a brilliant carmine red salt, which turns brown and finally an intense black on being gently heated, returning again to carmine on cooling. These changes occur within the limits of 60° and 212° F. For use in lecture experiments, mix the precipitates with a little water (to which some mucilage may be added), and apply a thin coating of each to card-board. A piece of slightly heated metal, held for an instant in contact with the card, or close to it, will at once bring out an image of itself,—a veritable heat-photograph. Many other striking experiments will suggest themselves to the teacher.

The carmine salt may be used as an application to parts of machinery liable to become too hot, where it will exhibit its characteristic color-changes to the eye should any excessive heating take place.

THE FIRST AMERICAN QUARTO BIBLE.

It is timely and pertinent, while the Wyckliffe Bible celebration is in progress, to revert to the fact that one of the first and most perfect Bibles ever published in this country was the Collins Bible, a quarto edition of which was published by Isaac Collins, in this city, in 1786. Isaac Collins was an admirable printer, and the edition of the Bible printed by him is said to have been the most perfect and correct English edition published up to that time. There were sixteen proofs of each form, read by different persons—by Collins himself, by members of his family, and by the most competent scholars and theologians. It is believed to be entirely free from errors. So high was its reputation that, when the American Bible Society determined to issue editions of the Bible in different sizes, a committee of learned divines, to whom the task of selecting a standard was committed, unanimously decided in favor of Collins'. Thus Trenton not only has the credit of issuing the first quarto Bible printed in the United States, but the most perfect. The Wyckliffe Convention might appropriately take some note of this fact.—*Trenton (N. J.) Gazette.*

THE EARLIEST PRINTED POSTER. — When Adolphus of Nassau attacked Mentz as a competitor for the archbishopric of that city, Diether von Isenburg, his rival in possession, being compelled to retire, affixed a declaration of his rights to the portico of the palace and upon the church. This printed document, which was styled "The Declaration of the Elector Diether against Adolphus Count of Nassau," bearing date 1462, and being unquestionably from the press of Fust and Schoeffer, is said to be probably the earliest printed poster. It is printed only on one side. The sheet is 2 feet in length and nearly 16 inches in breadth; the text embraces 100 lines, and the printed surface is 18⅝ inches in length by 12½ inches in width.—*Paper and Print.*

OLD BERKSHIRE MILLS

DALTON, MASS., U. S. A.

One party writes: 'The two hundred RECORD BOOKS, for 83 of the 99 Counties, now on exhibition at the Iowa State Fair, at Des Moines; and all, but four (!) of them, made from your 'OLD BERKSHIRE MILLS LINEN LEDGER,' Medium, 40lb., make a splendid show."

[The above cut is a fac-simile of the wrapper used on the Linen Ledger Paper.]

We will pay for any book rejected on account of fault in the paper. Send for Samples, test them in comparison, and see that your books are made from paper thus water-marked.

OLD BERKSHIRE MILLS

LINEN LEDGER PAPER

Will stand the severest test of COLOR, CLIMATE, INK OR WEAR.

Being **Triple Sized** (a process entirely our own) and **Loft Dried,** can be erased and written upon the fifth time distinctly. None genuine without the water-mark and date, thus—**Old Berkshire Mills Linen Ledger, 1880.**

L. PRANG & CO.'S

Valentines for 1881.

We take pleasure in herewith presenting to the trade our Price List of Valentines for this Season:

ASSORTMENT.—Our Valentines are made up in sets of one dozen, except Series 1, where six constitute a set, and are put up in a box or envelope. Each set contains all the designs of the series; and as no series has more than six designs, each design is more or less repeated in the set.

ENVELOPES.—Fine Cream-Tinted Envelopes are furnished with every series, except Nos. 9, 11, 15, 16, 17, without extra charge.

VALENTINES WITH SILK FRINGES.—We would call especial attention to these, as they will doubtless prove very attractive. These goods are made up with the best quality heavy silk fringe, made expressly for us. All fringed Valentines are furnished with protectors and envelopes, and are put up with assorted colors of fringes.

LIST OF PRANG'S VALENTINES FOR 1881.

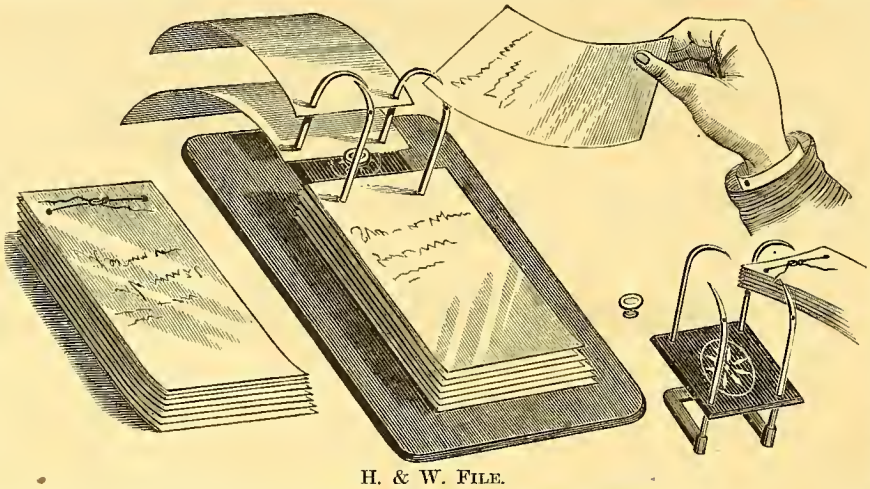
Trade Novelties.

[We will be glad to receive samples of all novelties issued in the trade, and will notice all such which possess merit free of charge. It is desirable to accompany descriptions with cuts whenever possible.]

H. & W. FILE.

An addition to the list of files now in the market is illustrated by the engraving. It may be wondered when there will be an end to new products of this class; but it may be assumed that as long as there is inventive genius and thought to trace out some new and convenient economical principle in files just so long there will be something new in this line brought out. The manufacturers of this file, Hasbrouck & Watson, assert that this is the simplest, most complete and convenient file made. It will be seen by the arrangement of the needles that papers may be taken from or placed in any part of the file without removing the other sheets and without mutilation. The file is so arranged that when it is full the papers may be bound with a string and taken off in a compact package. No springs are used in its construction, and it is said to be unequaled for durability. It is handsomely finished in black walnut with brass mountings. The file is put up two in a box, neatly packed, full directions for use accompanying each file.



H. & W. FILE.

NEW PATENTS.

No. 235,626. Mold for Casting Pencil Sharpeners.—Walter K. Foster, Stoneham, Mass.

No. 235,641. Toy.—Edward L. Morris, Boston, Mass.

No. 235,656. Pen-Holder.—William H. Sprague, Norwalk, Ohio.

No. 235,670. Printing Ink.—Martin Connelly, Philadelphia, Pa.

The inventor obtains a substitute for linseed or similar oils by boiling, for three hours, crude petroleum and lime together, at a temperature of about 350° Fahrenheit, in the proportion of about 1,800 parts of the former to 27 parts of the latter, and then mixes the deodorized product with the other ingredients.

No. 235,682. Manufacture of Paper Boxes.—Charles P. Housum, Decatur, Ill.

A rectangular paper-box blank consisting of a single thickness of paper divided lengthwise into three rectangular parts by two straight-scored lines, the central or larger part being divided into five rectangular parts by means of four scored lines at a right angle with the first to form four sides of a box, and the rectangular top and bottom of said blank divided into ten rectangular parts by cuts to form rectangular flaps to close the box, whereby waste of material or removal of waste cuttings is avoided.

No. 235,698. Method of and Apparatus for Corrugating Paper.—Moses Newton, Holyoke, Mass.

1. A method of corrugating paper, consisting in passing the paper as it comes, partially dried, from the drying rolls of a paper machine between corrugated rolls. 2. An apparatus for producing corrugated paper, consisting of one or more drying rolls and a pair of corrugating rolls arranged to receive and act upon the paper as it comes from the drying roll or rolls. 3. A method of manufacturing corrugated papers, consisting in forming the stock or pulp into a sheet, partially drying said sheet, and then subjecting the same while in the partially dried condition to the action of corrugating devices, and finally completing the drying operation. 4. In combination with a series of paper-drying rolls, corrugating rolls located at an intermediate point in the series.

No. 235,703. Instrument for Computing Time.—Henry J. Richardson, Brooklyn, N. Y.

An instrument for computing time, consisting of an endless ribbon having the months and days for two entire calendar years suitably marked upon it, in combination with two graduated scales, one containing the days in a year numbered from right to left, and the other containing the days in a year numbered from left to right.

No. 235,726. Pencil Holder.—Henry C. Benson, New York, N. Y., assignor to Joseph Reckendorfer, same place.

1. In combination with a tubular case, scissors mounted upon a sliding support in said case and provided with a spring which acts to spread apart the handle ends of the scissors blades, so that the latter, when closed and retracted within the case, will bear with yielding pressure against the walls of the same. 2. The combination of the tubular slotted case, a sliding block or support within said case, a sleeve or its equivalent upon the extension of said case connected with and adapted to move said block, and scissors mounted upon said block or support and provided with a spring which spreads apart the handle ends of the scissors blades, the parts being combined and arranged for joint operation. 3. The pencil holder or point protector containing scissors adapted to be projected from that end of the case opposite the pencil-holder end, said scissors having a spring between the handle ends of the blades, being mounted on a longitudinal sliding support operated from the exterior of the case.

No. 235,778. Calendar Inkstand.—Josias R. King, St. Paul, Minn.

A calendar inkstand, consisting of stand having two vertical cylindrical longitudinally slotted chambers containing cylindrical ink wells having the names of the days and months fixed thereon, whereas the numerals of the days of the month are arranged on a table between the slots of the two chambers.

No. 235,788. Pen-Wiper.—Geo. Lane, Brooklyn, N. Y.

A pen-wiper and finger-cleaner composed of strips of cloth corresponding generally to the different colors of ink usually employed in writing, and a strip of white cloth prepared with an acid for removing ink stains, the strips of cloth all being connected to a head piece.

No. 235,808. Fan.—Charles Pearl, New York, N. Y., assignor to Lazarus Fried, same place.

1. In combination with a fan-body consisting of a folding web connected with a central rotating head journaled between the arms of a hollow handle, a spring arranged within said hollow handle and having a band passing over the central rotating head and connected with the fan-body. 2. The combination of a fan-body consisting of a folding web attached to a central rotating head, journaled in two arms of a hollow handle, and provided at its ends with rigid strips with a spring arranged in said handle and provided with a band passing over the rotating head and connected with the hinged strip of the fan-body. 3. The combination of a fan-handle constructed with upwardly projecting arms, a fan-body consisting of a central rotating head hung between the arms of the handle, a circular folding web, and of rigid strips which are hinged to the central head and fitted into pockets on the opposite ends of the folding web, one of such strips being also connected to the handle and the other to a spring for spreading the folding web, and a stop adapted to hold the web shut against the action of the spring.

REISSUES.

No. 9,503. Blank Book.—Ira Reynolds, Dayton, Ohio, assignor, by mesne assignments, to Lucius D. Reynolds. Original No., 154,873, dated June 22, 1875.

CHATTEL MORTGAGES.

[In the appended list R. signifies a renewal of a pre-existing mortgage; B. S., bill of sale; and Real, a mortgage on real estate.]

NEW YORK CITY.

Mortgagor.	*Amount.*

NOTE.—The statement that Eaton & Conler, Lincoln, Neb., had executed a mortgage for $2,500 is said to be incorrect. Webster Eaton, proprietor of the Lincoln *Globe*, sold Mr. Conler a half interest in his business and took a mortgage therefor. This mortgage he still holds.

PERFECTED STYLOGRAFIC.

The original and genuine Pen. Warranted the best made. Thirteen Patents granted to **A. T. CROSS,** the last, June 29, 1880, being the most important and giving the name **Perfected.** All cuts are exact size

MAXIMUM.—Holds most ink of any pen made; tires the hand less than smaller barrels. Fits Hambler's Pocket. Same price as Long.

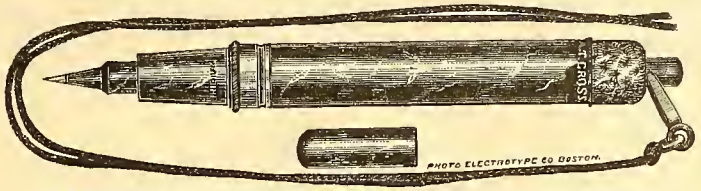
LONG.—The famous Desk Pen. Extra long. Holds most ink, except the **Maximum.**

SHORT.—Most widely known and sold heretofore; but Maximum is better for desk

or Hambler's Pocket, Giant for Vest Pocket or Cord. So this will be largely superseded.

Thirteen patents granted; seven more applied for; more genuine improvements; better record; more styles; larger stock; more thoroughly protected by patents than all rivals combined.

☞See Descriptive Circulars.



GIANT, with Cord and Gold Ring, same price as Short.

Dealers and agents supplied with wood, glass and paper signs, placards, circulars, leaflets and cuts. We make both largest and smallest Pens, both of which will have all new improvements.

☞See Descriptive Circulars.

VEST GIANT, Plain, - - $2.50.

All Styles up to $4.00.

☞ **VEST GIANT.—The Cheapest PERFECTED Pen made.**

IF YOU WANT THE BEST STYLOGRAPHIC PEN,

The Latest and the Best.

Circulars on application.

Examination Solicited and Satisfaction Guaranteed.

The attention of the Trade is called to the improvements made and advantages offered in Livermore's New Stylographic Pen.

Patented July 15, 1879, and March 9, 1880.

FIRST—**A Smaller Air Tube**, allowing more space for the ink, and rendering the operation of filling easier and less frequent.

SECOND—**The Manner of Fastening the Needle**, not to the air tube, where it would be in danger of being bent or injured every time the pen was filled, but in the point, where it is not so exposed.

THIRD—**The Protection of the Spring** by a silver casing, preventing the ink from clogging its action.

FOURTH—**The Duplex Interchangeable Point Section**, furnishing great facility in cleaning the pen.

FIFTH—**The Ease with which Repairs can be Made.** The needle being in the point, it is not necessary to send the whole pen to the factory, but any dealer can supply a new point.

SIXTH—**Freedom from Legal Difficulties.** The New Stylographic Pen is manufactured under the patent controlling the use of an air tube in a Fountain Pen, and it is therefore free from legal complications.

SOMETHING ENTIRELY NEW.

Corser's Combined Rule and Postal Scale.

(PATENTED, JULY 13, 1880.)

S. E. BARTON & CO., Manfrs (Sole) Agents

179 Milk St., Boston, Mass

This Combined Postal Scale, Desk Ruler and 16-inch Rule is the most convenient article for desk use ever invented. It supplies the need of the several articles and only occupies the space of a ruler. Does not require to be set aside when not in use and there is neither balancing material to drop out nor springs to become injured by accident and thereby make the Scale variable. Being sealed accurately and tested when manufactured, it is always true. It gives the weight in ounces and fractions the same as any scale, but its **Great Merit** lies in its computing the postage required on any class of mail matter at the same time. Its low price makes it readily salable and its many flattering indorsements guarantee its accurateness and utility.

THOS. L. JAMES, Postmaster of New York, writes: "It is ingenious, accurate; ought to have a place on **every desk.**"

☞ Retail price 75 cents. Supplied to the trade at reasonable discounts. Should be kept in the stock of every stationer and hardware dealer. Send for descriptive circular and price list. Manufactured by The St. Johnsbury Scale Co. ☞ **Dealers Supplied by**

Theo. L. Eisling, publisher of the Newark (Del.) *Ledger*, is dead.

Price, Jones & Co., printers, Memphis, Tenn., have dissolved partnership.

F. S. Bidwell, bookseller, Groton (Mystic River), Conn., has been burned out.

The stock of Emanuel Dessauer, dealer in notions, Belleville, Ill., has been attached.

Geo. P. Richardson, publisher of the *Herald*, Thomaston, Me., has sold out to Fuller & Jones.

Frank S. Burton, publisher of the *Independent*, Midland, Mich., has sold out to Cressy & Beardsley.

The Philadelphia Premium Book Company (C. M. Gilbert), Philadelphia, Pa., is selling out at auction.

A. R. Blacklock, dealer in paper and printer's stock, Baltimore, Md., has changed his style to A. R. Blacklock & Co.

B. H. Thayer & Co., wholesale dealers in paper, Boston, Mass., have dissolved partnership. L. Hollingsworth & Co. continue.

The Southern Railway News Company, Louisville, Ky., has increased its authorized capital to $300,000, with the privilege of increasing it to $1,000,000.

Wm. Fleischaker and Joseph L. Newburger have been admitted to the firm of S. W. Newburger & Co., wholesale dealers in notions, Louisville, Ky.

John H. Ammon has retired from, and T. B. Ticknor has been admitted to, the firm of James R. Osgood & Co., publishers and heliotype printers, Boston, Mass.

Hermon Griffin, of Hermon Griffin & Sons, dealers in bookbinders' materials, New York, is dead. Edward P. and Charles F. Griffin continue under the old style.

The firm of Perkins & Goodwin, wholesale paper dealers, of this city, has admitted Frank Squier and J. Fred. Ackerman. The style has been changed to Perkins, Goodwin & Co.

Charles J. Cohen, Philadelphia, has issued a notice that all accounts in future are to be net. The prices, however, of all goods have been reduced, so that the trade purchasing from this house will secure lower figures than heretofore.

Local gossip says that J. R. Daytou & Co., Quincy, Ill., have one of the largest and best book and stationery stores in this section of the country. This firm also deals in all grades of writing and wrapping papers.

The Holyoke Glazed Paper Works have got started. The company has decided to put up all of its papers 500 sheets to the ream. This is a good decision. Samples of the glazed paper turned out from these works have been forwarded. They are excellent in color and finish.

The J. W. Butler Paper Company, Chicago, sends its New Year greeting on a handsome, bevel edged, tinted card, having the device of a bell ringing in the Happy New Year, and beneath it the expression of the compliments of the season. The card is inclosed in a tasty envelope with an embossed scroll in colors on the flap.

Hasbrouck & Watson, 51 Nassau street, this city, have their new catalogue now ready. It contains twenty-four pages and is handsomely gotten up in every respect. It embraces a line of goods, either manufactured or controlled by them, that are sure to have a very large sale; in fact, each article is in itself a business. It is evident that they must do a large trade, as every article on their list is of standard quality. The firm is ambitious to handle only the best of any article in its line, and the trade will do well to interview it when in quest of anything new and good. The trade should send for this catalogue.

The Dixon Crucible Company, manufacturer of lead pencils, &c., suspended on Tuesday. The liabilities are given at $1,000,000, and the assets are said to be nearly equal to that amount. The suspension, it is thought, will only be temporary, and it is believed that the creditors will be paid in full. The suspension was caused by the failure of Fowler, Crampton & Co., a house dealing in East India goods, which holds a large amount of the Dixon Crucible Company's paper. Edward F. C. Young has been appointed receiver of the company.

C. A. Dexter, Sedalia, Mo., doubtless found the stationery trade very good last year. In a long list of improvements made in Sedalia last year and printed in the *Democrat* of December 26, he is credited with having put up a two story brick store 25x90x16, with plate glass front, &c. One secret of his success is that he advertises, the columns of the *Democrat* attesting his enterprise in this respect.

G. H. Floto, representing Cassell, Petter & Galpin, Kamak & Co., Ph. Hake, Marcus Ward & Co., and Alex. Agar, starts this week for his usual trip throughout the South. His friends are invited to take note of this.

Morton, Phillips & Bulmer, Montreal, have forwarded their monthly sheet calendar for 1881. It is neat and well printed, and has on the back some serviceable information as to postal charges in the Dominion.

The Stationer thanks its Toronto correspondent for a copy of Grip's Almanac for 1881. This gives the comic side of Canadian meteorological vaticinations, chronology, astrology, &c.

The firm of Nagle, Cook & Ewing, dealers in paper hangings, Philadelphia, Pa., has been dissolved by the withdrawal of George F. Nagle. Remaining partners continue.

Attention is called to the advertisement of E. P. Coby & Co., in which they offer the remaining few thousand of their daily pad calendars at a reduced price.

A. J. Holman & Co., publishers, printers and binders, Philadelphia, Pa., have admitted as partners E. P., A. J. Jr., W. A. and J. N. Holman.

Martin & Wm. H. Nixon, paper manufacturers, Philadelphia, Pa., have been partly burned out. Loss $50,000; partly insured.

J. S. Williams & Co., printers, Philadelphia, Pa., have admitted J. G. Shreve to partnership, under the style of Williams & Shreve.

The style of B. G. Hale & Co., paper manufacturers, &c., this city, has been changed to D. S. Walton & Co.

Emil Selig has withdrawn from the firm of M. Selig & Co., dealers in notions, Philadelphia, Pa.

Golder & Unduch, dealers in paper hangings, Baltimore, Md., have dissolved partnership.

J. C. C. Whaley, publisher of the *Clinton Democrat*, Lock Haven, Pa., is dead.

O. P. Moore, printer, Nashua, N. H., has been burned out.

Wm. Pool, publisher, Niagara, N. Y., has been succeeded by Peter Porter.

B. Quinn, publisher of the *Journal*, Osakis, Minn., has been burned out.

A. B. Bowman, publisher of the *Sullivan Review*, Dushore, Pa., has sold out.

A. M. Parker, publisher of the *Monitor*, California, Mo., has been burned out.

Mrs. Rachel Kanton, dealer in notions, Dayton, O., has been closed out by the sheriff.

Wm. Beach and the firm of Cobb & Wright, printers, Minneapolis, Minn., have been burned out.

The stock of Sprague & Son, publishers of the *Kennebec Journal*, Augusta, Me., has been attached.

The Advance Printing Office, printers, Philadelphia, Pa., has dissolved partnership. Charles A. Cabrera continues.

Ellis, Ayres & Co., jobbers in notions, Philadelphia, Pa., have dissolved partnership. W. G. Ellis settles all accounts.

E. Wells Sackett & Brothers, stationers, New York, have dissolved partnership. E. Wells Sackett & Rankin succeed.

W. C. Cowan, with M. A. Reay & Co., has just recovered from a severe illness of two months' duration, and is again at work.

Alex. M. Alexander has retired from the firm of Alexander Brothers, dealers in fancy goods, New York city. Business will be continued under the old style.

The firm of W. T. Barker & Co., dealers in paper and twine, Boston, Mass., has been dissolved by the retirement of O. D. Forbes. The style remains unchanged.

Wm. T. Harris has been admitted to an interest in the firm of George S. Harris & Son, printers and lithographers, Philadelphia, Pa. The style is George S. Harris & Sons.

I. H. Hamburger is now ready with an excellent line of Christmas and New Year's cards. Samples of relief pictures by the most celebrated makers are also shown by this house.

Edward M. David & Co., wholesale dealers in notions, Philadelphia, Pa., have dissolved partnership. A new firm has been formed under the style of David, Keyser, Rheinhold & Co.

The reported failure of J. S. Taft, Waco, Texas, and of his offering to settle at fifty cents on the dollar, is incorrect. The standing of Mr. Taft is vouched for by some of the leading houses in the trade in this city.

Hart, Rawlinson & Co., Toronto, Canada, had a full and attractive list of novelties for the holidays. Among these were some things not common here, and of which only the description induces the belief that they must have been charming in fancy and execution.

The opening of the schools after the holidays has given an impetus to the business in school bags. R. Fideau, 16 Beekman street, is in receipt of quite a number of good orders from the wholesale trade for his "Unparalleled" school bags, and invites the attention of the trade to his announcement of these goods in another column.

Willy Wallach is sole agent for Raphael Tuck's birthday, Easter and text cards, samples of which have been received, and are now ready for inspection. Mr. Tuck has secured all of the good designs which competed for prizes at his recent prize exhibition in London, and promises

to issue next season the "best and largest collection of Christmas and New Year cards ever published."

Allen & Wilmarth, booksellers, of this city, have dissolved partnership.

J. S. Penn, San Antonio, Texas, is offering to settle at fifty cents on the dollar.

W. E. Davies, of Thomasville, Ga., is trying to compromise at forty cents on the dollar.

C. H. Noyes, of Noyes, Smith & Co., importers of notions, &c., New York city, is dead.

Charles M. Taber, of Charles Taber & Co., New Bedford, Mass., was in town during the week.

E. O. Goodwin, dealer in fancy goods, Portsmouth, N. H., is advertised to be sold out by the sheriff.

Attention is called to the revision in the prices of Prang's valentines, as quoted this week. See advertisment.

Fred. A. Baggs has been admitted to the firm of Carter, Stewart & Co., dealers in notions, New York city.

W. I. Martin, of Samuel Raynor & Co., has been confined to his house for a week or ten days, owing to throat troubles.

C. W. Barnes, paper dealer, New York, has admitted T. R. Barnes as partner, under the style of C. W. Barnes & Co.

E. & H. T. Anthony & Co. have placed on the market new pictures of Sarah Bernhardt in different positions. They are in great demand.

Myers Brothers are now very busy preparing for the spring trade, and expect in a few days a large consignment of De La Rue's handsomest designs in valentines.

H. Riddle & Co., Quincy, Ill., added a full line of toys to their china and glass trade, owing to the holidays, and propose hereafter to keep a full stock of new goods of this description.

Ch. Lorilleux & Co., Paris, have sent THE STATIONER their daily pad calendar for 1881. This is styled the the "Bibliographie de l'Imprimerie" and justifies its name, as each leaf contains bibliographical memoranda both interesting and valuable.

Slote & Janes, 140 Nassau street, this city, have forwarded specimens of their card calendars and daily memoranda for 1881. These are in their usual good style. The firm publishes them for the use and convenience of their customers, and don't sell them.

H. H. Shepard, Kansas City, Mo., issued a condensed list of holiday offerings, together with his announcement for the holiday season, the same being printed on handsome, steel engraved, folded cards. Mr. Shepard makes a specialty of fine stationery and engraved work.

Jansen, McClurg & Co., Chicago, will publish this month "Familiar Talks on English Literature, a Manual Embracing the Great Epochs of English Literature from the English Conquest of Britain, 449, to the Death of Walter Scott, 1832," by Mrs. Abby Sage Richardson; and "Music Study in Germany," by Miss Amy Fay.

Attention is called to an advertisement in another column of some very nice stone front houses offered for sale by a well known and reputable builder. These houses have features which it is thought will specially commend them to the favor of the trade, whose good taste has become famous. Any stationer wanting to buy a house or to invest the profits of the holiday trade in good property, may find it advantageous to look at the houses.

THE STATIONER.

DEVOTED TO THE INTERESTS OF THE

Stationery and Fancy Goods Trades.

WEEKLY---$2.00 PER ANNUM.

Single Copies - - - - 10 Cents

NEW YORK, THURSDAY, JANUARY 6, 1881.

Advertisements cannot be received for insertion in the current week later than 12 M. on Wednesday. The charge for advertising is 25 cents a line, each insertion. Special terms for standing and displayed advertisements to be had on application.

This journal aims to be a medium of information for and a representative of the interests of every one connected with the stationery and fancy goods trades. It contains a full and trustworthy survey of the market for stationery in this country, in all cases giving the actual prices at which goods can be bought of importers and jobbers in this city, together with a detailed account of novelties in the trade, patents relating to stationery, and current items of interest. A review of foreign markets and accounts of movements abroad will also be furnished, and no pains will be spared to make THE STATIONER a thorough and complete exponent of the trade.

Subscription and postage for Great Britain, per annum..... 12s.

Any information our readers may wish to obtain shall be cheerfully given, and prompt replies will be made to all inquiries addressed to us on any subjects of interest to the trade.

Communications on all trade matters are earnestly solicited. Address

HOWARD LOCKWOOD, Pres. and Treas.
American Stationer Association,
74 DUANE STREET, NEW YORK.

Subscribers to THE STATIONER can be supplied with the best cloth binder in the market. Deliverable at the publication office. Price, fifty cents.

Readers of this paper who avail themselves of the information obtained from its columns, by advertisement or otherwise, are requested to notify their correspondents of the source of their information.

THE events of the past year require only brief summarizing. Nor would the pressure on our columns permit us to make more than cursory reference to the character of trade during the twelvemonth.

SPEAKING a year ago of the year preceding, we said that it had been remarkably prosperous, and that there was reason "to expect to secure the blessings of peace and industry" in 1880. This expectation has been realized. All through the year there was a steady flow of prosperity, and the different trade seasons were notable for activity, an enlarged demand from consumers culminating in a previously unknown rush for goods, so extreme in cases that there was no chance to meet requirements which had already been anticipated to an unusual degree.

No one portion of the country was exempt from prosperity. Under the stimulus of active trade our industries were well employed. The crops were ample, and ready markets were found for them. Political conflicts could not prevent the progress of business, for there was evident determination to subordinate all strifes to the peaceful conflicts of commerce. Although speculation was rife in some departments of business, it was not widely influential in disturbing the conservative tendencies of the year. In the stationery trade this was particularly marked, with perhaps a single exception. Prices kept steady in most lines with some advances in values; but in all cases where forcing was tried there was a reaction which impressed the value of caution, and the lesson was not lost. In papers the tendency was upward at the beginning of 1880, but this culminated soon after, and a decline followed, prices reaching a steady basis with the close of the summer months.

BUSINESS disasters were few, and the trade were called upon to experience little of the bitterness of over confidence or misplaced trust. We have not, during any year in which our efforts have been devoted to the stationery trade, noted a better method of conducting business than that which obtained during last year. There was, naturally, a desire to sell goods, but this did not prevent the exercise of tempered judgment in disposing of them; and, on the other hand, buyers kept within moderate limits, and only increased their requirements as the pressure of the consumptive demand justified them in making larger purchases. As we have remarked, this action was in some particulars too restrictive, despite the fact that the trade had become aroused to the necessity for making unusual exertions and for laying in extra stocks. Of the results every person is pretty well satisfied. It is not necessary that we should go over the satisfactory assurance with which the year closed. It is sufficient to say that 1880 has done more than was expected of it; and if good counsels, prudent action and honest purpose combine to control and direct the business of the country, we may be sure that 1881 will set us still further on the course of prosperity and will be remarkable.

STATIONERS' BOARD OF TRADE.

ANNUAL MEETING.

The fifth annual meeting of the Stationers' Board of Trade was held on Tuesday afternoon at the offices in the Bennett Building, in this city, the president Willy Wallach being in the chair, and the secretary Chas. H. Hunter recorded the proceedings. The calling of the roll by the secretary showed the following named firms as represented either by proxy or in person: Alex. Agar, Agawam Paper Company, Althof, Bergmann & Co., J. F. Anderson, Jr., & Co., Charles T. Bainbridge's Sons, A. S. Barnes & Co., Berlin & Jones Envelope Company, Boorum & Pease, James Conner's Sons, T. Davids & Co., Farmer, Little & Co., D. W. Glass & Co., Hampshire Paper Company, Janeway & Co., A. Jardine & Co., Koch, Sons & Co., Massasoit Paper Company, Mount Holly Paper Company, National Blank Book Company, Parmenter & Walker, Powers Paper Company, Rhode Island Card Board Company, Riverside Paper Company, Smith Paper Company, Southworth Company, Valley Paper Company, Willy Wallach, Richard Worthington.

The minutes of the last annual meeting were then read and approved. The president's report was then read.

REPORT OF THE PRESIDENT.

Gentlemen: On entering upon a new year it devolves upon your officers to inform you of what has been done during the past one. We have continued in the same path which we followed since our incorporation, and have endeavored to extend and perfect the services which our organization renders to its members, and to sustain its good reputation and influence in the trade. If the number of members can be considered as an indication of our success, we have reason to believe that our efforts have not been in vain. At our last annual meeting we had 157 members. During the past year six withdrew and ten were elected, making the present number 161, an increase of four. Our membership was not diminished on account of death, but two of the firms represented in our organization have suffered the loss of their senior partners. Charles T. Bainbridge and Melvin Hard, representing Porter & Bainbridge and Melvin Hard & Son, belonged to the founders of the Stationers' Board of Trade, and served as trustees under the old organization. We have lost in them active and earnest associates.

From the report of the treasurer, you will see that our financial condition is favorable. We have no debts, have a considerable amount in the treasury, besides our valuable accumulation of records, our office furniture, books, &c. The report of the Financial Committee will show you what our information, collection and bankruptcy departments have done under its supervision and under the management of the secretary, who, besides, had to give much of his time to the investigation of failures, in which some of our members were interested. For this purpose, he visited, during the last year, Northampton, Mass.; Omaha, Neb.; Chicago, Ill.; Detroit, Mich.; New Haven, Conn.; Providence, R. I.; Portland, Me.; Paducah, Louisville, Ky.; Cincinnati, Philadelphia and Bradford, Pa. His last visit, particularly, proved the usefulness and necessity of co-operation. A party, who owed to different houses an aggregate amount of about $3,000, suspended payment. All claims were

placed in our hands for settlement, and the secretary secured the payment in full by accepting notes, secured by a deed of trust on the stock. The debtor after paying three of the notes, broke his trust by removing and shipping the goods to another State, and then absconded. The secretary, as soon as learning these facts, followed him, had him arrested, and recovered the largest portion of the goods. None of the individual creditors had a sufficient interest in the case to undertake the trouble, risk and expense of these proceedings, while we, as the representatives of all the creditors, considered it our duty, and felt fully justified in doing it. The Arbitration Committee has rendered valuable services, and its members had to devote much time to its business. It is questionable if we are justified to demand such sacrifices from individual members for the benefit of those who have cases to arbitrate, and I call your and the attention of the trustees to this matter. I regret to state that Congress has not yet passed a general bankruptcy law. Different bills have been introduced and submitted to the consideration of commmercial bodies. It is now proposed that representatives of the principal ones should meet at a fixed day at Washington, perfect one of the bills and urge its passage upon Congress. A similar course is recommended in regard to the Reagan bill, intended to establish a general supervision by the United States government over the railroads of the country. Our members are as much interested in securing cheap transportation at uniform rates for their products as any other class of manufacturers or merchants, and I believe that we should take an active part in promoting such important matters. We also were invited to send delegates to the National Convention of ship owners and other commercial bodies, which was held at Boston last October, and we were represented by Henry O. Houghton and James R. Carter. The result of this convention has been published in the daily papers. There is another matter which requires the atteution and united action of the different commercial bodies. I refer to the laws of the different States which levy taxes or compel the taking out of licenses for commercial travelers. Our interstate commerce is very much impeded thereby, and a strong effort should be made to remove these obstructions. It gives me great pleasure to state that the wishes and hopes expressed in my report of last year have been realized. Prices have generally receded to a sound and permanent basis, confidence is restored, and I believe we all have reason to be satisfied with the results of 1880. If we use ordinary precaution, if we avoid undue expansion and attend closely to our respective vocations, I have no douht that the present prosperity will continue for some years to come. In conclusion, I offer to the trustees my best thanks for the confidence they have bestowed upon me and their hearty snpport of and active co-operation in every measnre for the interest of our corporation. Our employees have performed their duties faithfully and energetically, and deserve the acknowledgment of the hoard.

The treasurer, Henry W. Curtis, then read his report. It is substantially as follows:

TREASURER'S REPORT.

Cash on hand January 1, 1880	$1,892.97
Receipts during 1880 to December 31	10,014.44
Total	$11,907.41
Disbursements of all kinds	9,803.18
Balance on hand Jannary 1, 1880	$2,104.23

The chairman of the Finance Committee, Geo. L. Pease, next submitted the

REPORT OF THE FINANCE COMMITTEE.

Gentlemen of the Stationers' Board of Trade: I herewith snbmit for your consideration a retrospect of the work performed by this board under the supervision of the Finance Committee during the past year. Our books of records and reports have spread upon their pages unusually correct reports of the financial condition of 12,388 firms doing business not only in the United States, but many foreign countries. We have increased our reports during the past year 2,054, and have revised 2,704. We have obtained the statements of parties dealing with our members to the number of 620. Our office has sent out 4,304 inquiry tickets among the trade, and we have furnished our members with information regarding 9,150 dealers. All new information has been recorded upon our books. In the Collection Bureau we had acting for our board one year ago 342 attorneys. At this time we have 401. We have changed 10, and have a large number recommended to us who will be appointed whenever occasion requires their services. On January 1, 1880, we had 50 bankruptcy cases unsettled. At this time there are only 29 remaining open, 9 of which will yield no dividend. During this year we have had before the board 63 failures, 14 of which have been settled by compromise, 10 by assignee, 39 yet unsettled. Dividends have been realized ranging from 15 to 60 per cent. During the year we have received 882 claims, representing $76,808.42. Of this amount we have collected $33,713.33, leaving claims involving $43,095.09. This department of our work has been less successful than in former years, owing to the varying and intricate State laws we have to contend with, many of which seem to be specially framed to work in the interest of the failing party and against a non-resident creditor. We would add a word on the point of a new bankrupt law, which has been so ably dwelt upon by our president, and urge each member to use his influence to have enacted this winter a new bankrupt law, one that will be humane and lenieut to the honest and unfortunate bankrupt, and equally searching and severe for the dishonest and scheming rascal. We have employed in our office the same force as last reported—9 clerks and a secretary. There have been held 83 meetings of various kinds. There have been sent out 10,699 letters and about 17,000 circulars, and we have received 6,358 letters. Respectfully submitted,

GEO. L. PEASE,
Chairman Finance Committee.

The next business was the election of trustees to serve during the present year, and resulted in the choice of all of the gentlemen who served last year, with the exception of Charles C. Haffelfinger, E. Claxton, of E. Claxton & Co., Philadelphia, being chosen. The Board of Trustees will meet next week, when the election of officers will take place.

Among the visiting members of the trade in the city this week was E. R. Andrews, Rochester, N. Y.

Henry Levy & Son are receiving large consignments of fans for the spring trade. The line of import samples from which this house intends to take orders next season is expected from Europe in a few days.

The Committee of Arrangements on the annual dinner of the Stationers' Board of Trade reports that the tickets have been taken very liberally. Among other prominent gentlemen who have signified their intention of attending is John D. Parsons. Thursday evening, January 13, is the time, and Delmonico's the place it is to come off.

Reynolds & Reynolds, Dayton, O., presented each of their hands, 74 in number, with orders for merchandise to the value of $1 each, on several of the leading houses in that town. These orders are an annual gift with the firm and are issued on specially printed blanks, which also contain a Christmas greeting from the firm to the recipient.

T. B. Peterson & Brothers have just published a new, complete, and uniform edition of all the works written by Mrs. Emma D. E. N. Southworth, in forty-three volumes; "Beautiful Snow," a new illustrated edition, bound in snow cloth; "My Hero," a captivating love story, by Mrs. Forrester; "The Trials of Raissa," and "The Princess Ogherof," by Mme. Henry Greville; "Camille, La Dame aux Camelias," by Alexander Dumas; and "Self-Made," by Mrs. E. D. E. N. Southworth; and they have in press for immediate publication, "Xenie's Inheritance," by Henry Greville; "Bellah," a love story, by Octave Feuillet; "Vidocq, the French Detective," an autobiography, with portrait and engravings; "Madame Bovary," by Gustave Flaubert; "Sabine's Falsehood," from the *Revue des Deux Mondes;* "The Black Venus," by Adolphe Belot; and "La Curee," by Emile Zola.

Charles Kimber, of London, England, has introduced to the notice of the lithographic trade a new facing stone to replace pumice stone, for intermediate use between grinding and polishing. It is fast-cutting, and though somewhat soft it does not break up like pumice; it yields a surface very free from scratches, and the final polishing is therefore effected in less time.

Market Review.

OFFICE OF THE AMERICAN STATIONER,
WEDNESDAY, January 5, 1881.

THE MONEY MARKET.—The local money market is comparatively easy, under the large disbursements of January interest and dividends by the Treasury and corporate companies. The rates on call, with sound collateral, are 3@6 per cent., and for prime commercial discounts 5@6 per cent. All the indications point to the conclusion that the supply of loanable capital is destined to be in the near future largely in excess of the requirements of borrowers. The government bond market was generally strong on a moderate volume of business, and new 4s advanced ⅛ per cent. Railroad mortgages were active, but irregular, the majority of the leading issnes, however, showing an advance in the late dealings. The market for foreign exchange was weak, and the posted rates for prime bankers' sterling bills were reduced to 98¾ for 60-day and 99¼ for demand bills; the actual rates are 98⅝@98¾ and 99 1-16@99¼ respectively. Cable transfers are 99¼@99⅜. There was no trading in commercial bills according to the new system of quoting.

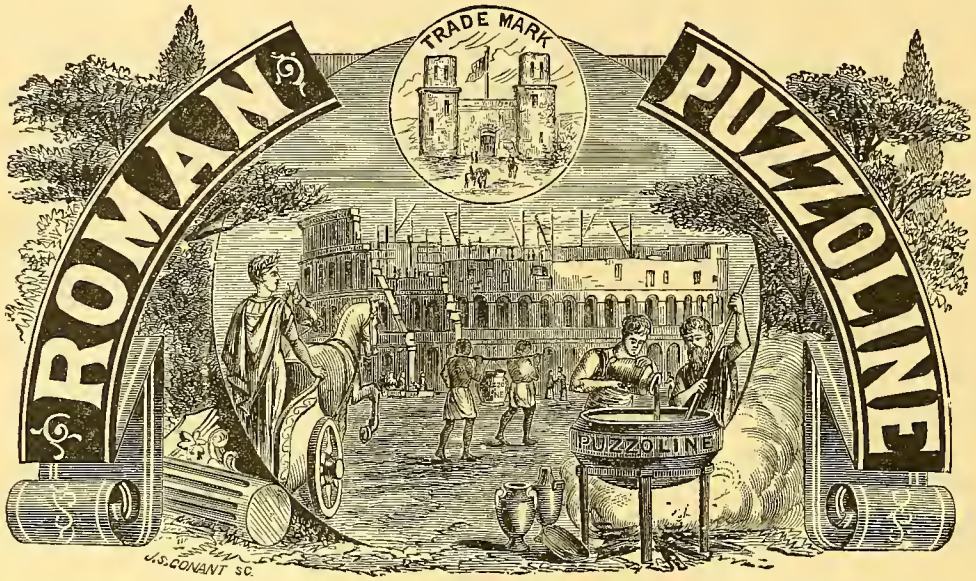
THE PAPER MARKET.—The balancing of the accounts of the year just closed has occupied so much of the attention of business men that current trade, as usnal at this period, continues light, and values have undergone no change. Although this is about the character of trade among the dealers, there is greater complaint from manufacturers of annoyance from severe cold weather hindering the full working capacity of their mills than there is of a lack of orders. In fine writings there is a moderate business doing among the city trade, but most of the deliveries are on old orders. The limited number of the new orders are to meet immediate wants, and are filled at fair prices. The moderately active call for book papers is still kept up, and prices rule steady and unchanged. The jobbing demand for manillas, although less active than a month ago, is unusually good for this time of the year, when a light business is generally expected. The recent action of the Straw Board Association in lowering prices has given an impetus to the demand, and bnyers for the spring trade have, to a considerable extent, anticipated their wants, and have bought quite freely within the past fortnight. The uncertainty as to prices before the association met caused buyers to hold back until the question was defiuitely settled, the result of which is quite satisfactory to both the dealers as well as purchasers. The recent advance made by the manufacturers of straw wrappings is well sustained owing to the scarcity of light weight paper. There is only a limited movement in binders' boards, although prices are steady.

THE STATIONERY MARKET.—With the close of last week trade in fancy goods quieted down, and the dealers are now turning their attention to spring and summer goods. The fan trade is beginning to start up very favorably with some of the leading houses, and valentines and Easter cards have already been placed upon the market. In staple stationery much of the dullness of midwinter is being experienced, as about the most that is doing now is the supply of a moderate city trade, and only an occasional out-of-town buyer calls for goods to any considerable extent. Several prominent honses are launching out into new lines, adding stationery and fancy goods departments. Some of the new goods for the spring trade will make their appearance before long. Staples rule firm and steady.

The Cement of the Ancients.

UNEXCELLED FOR STRENGTH AND DURABILITY!

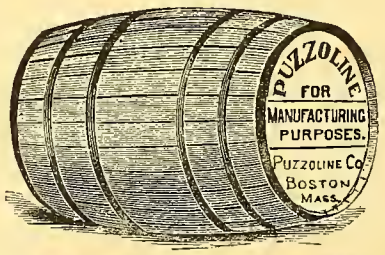
☞ CAUTION.—Manufacturers or others using adhesives of any kind are invited to examine into the merits of the above before purchasing, as none are genuine without the Trade-Mark, a castle, blown into the bottle.



☞ CAUTION.—Manufacturers or others using adhesives of any kind are invited to examine into the merits of the above before purchasing, as none are genuine without the Trade-Mark, a castle, blown into the bottle.

This new adhesive is a **liquid glue and cement combined,** and possesses greater strength and tenacity than any other known cement. It is composed of no injurious ingredients, **is entirely odorless,** and is **always ready** for use; no heat being required as with other adhesive compounds.

As a **Cement** in repairing **Crockery, Glassware** and **broken Ornaments** of all kinds, it is **unequaled.** It will stand the test of boiling water as no other adhesive will. As a **Glue** it is not affected by heat or moisture, and will hold more firmly than any other known preparation



CIMITOLINE.

A MUCILAGE.

Its action is quicker, it is not affected by moisture, will not sour, mold, or dry up in any climate, and does not wrinkle the paper, as is the case with mucilage now in general use.

TELEGRAPH COMMUNICATION WITH MILLS.

PRANG'S VALENTINES.

These goods are now out, and samples are ready for the trade to order. Complete price lists were sent out a few days ago direct to all customers, and anybody who may have been overlooked will find a detailed list in the advertisements in this issue. The line is very extensive and very fine in quality. It embraces eighteen series of cards; but, by arranging some in different styles as to make up and finish, the line is increased to twenty-nine series, which cover a large range of prices. The cheapest series is retailed at 35 cents per dozen, while the most expensive is quoted at $24 per dozen retail. With many of the cards the famous fringes have been introduced, which caused such an enormous demand in Christmas cards.

Series No. 1 consists of two designs of large size, folding and with fringes all around. The outside shows beautiful designs of wild roses and clover, while the inside presents on the left hand nicely lithographed lettering suitable to the occasion and surrounded by a handsome design, and on the right elegant bouquets of heliotrope and pansies printed on satin and incased in a neat mat. A cord and tassel tie the cards where folded. These cards retail at $2 each. No. 2 presents a very long upright card with folding sides. The outside is nicely ornamented in tints, while the inside is unusually fine and rich in coloring. One of the two designs shows Cupid out in the cold in a snow storm beneath a window awaiting admission, while the other design is floral, showing brilliant sprays of hollyhocks. This card is retailed at 50 cents. No. 3 shows four figure designs on a rich floral groundwork, and is very beautiful in conception as well as in execution. Retail price, $3 per dozen, or with fringes all around and tinted back, $4.80 per dozen. No. 4 embraces two female figure designs. This card is panel shaped, size 4¼x7¾, and fine in execution, and retails at $4.80 per dozen, or with fringes all around the edges at $7.20 per dozen. No. 5 is also very large, being 6x8 inches, and shows two most beautiful floral designs with tasty lettering. Price, $4.80, or with fringe, $7.20 per dozen. This card is very rich and will sell largely.

No. 6 is entirely novel, and shows four designs of flowers—wild rose, aster, daisy and pansy. The card is plain, with suitable lettering, the only ornamentation being a band of the flowers stretching diagonally across it. No doubt that this will prove one of the favorites of the season. It is offered in three different ways: As card at $1.80 per dozen; with silk bow and handsome easel back at $3.60, and with silk fringes, silk bow and ornamental back at $6 per dozen, retail. No. 7 is also a large card, showing two designs of pansies and pelargoniums on tinted ground, and finely executed; price, $3 per dozen, or, with fringe, $4.80, retail. No. 8 shows six floral designs at $2 per dozen. This is a last year's card—a great favorite. No. 9 shows six floral and emblematic designs on drab ground, and will sell well at 60 cents, retail, per dozen. No. 10 embraces three very finely executed designs of children; price $3.60 per dozen, or, with fringe, $7.20 per dozen, retail. No. 11 shows four handsome floral designs on a diagonal gold ground, and retails at 60 cents per dozen. No. 12 is a folding card, showing a tinted outside, and three designs of little girls among flowers on the inside. It sells at $3.60 per dozen, or, with fringe, at $7.20, retail. No. 13 comprises the six figures contained in Nos. 10 and 12, as single cards, unfolded, and of course reduced in price. It sells at $1.80 per dozen, or friuged at $3.60, retail. No. 14 presents the two pansy

designs, of which not enough could be furnished last year; price $3 per dozen, retail. No. 15 shows two humorous figure designs at $1.20 per dozen, and No. 16 shows a pansy and a rose stamped out and folded, face and back, with suitable inside lettering. This is quite a novelty and will retail at $3 per dozen. No. 17 contains four pretty little moss rosebud designs on a dark, drab ground, at 35c., retail, a dozen; and No. 18 presents six very handsome little fans, with designs on both sides and with silk fringe and tassels; price $3 per dozen, retail.

In addition to this extensive line a fine assortment of sachets, printed beautifully on satin, is in work, and will be brought out soon.

Fine, cream-tinted envelopes will be furnished with all these cards, except Nos. 9, 11, 15, 16, 19, without extra charge, and these will prove very convenient to dealers. All the fringed cards are packed singly with protectors, so as not to spoil the appearance of the fringes. The usual discounts will be given to the trade on these goods. This detailed description will enable dealers to order understandingly, and they are advised to order as early as possible. There is a rapidly growing demand for cards for valentines, and it is likely that there will be as much of a rush for them as there has grown up for Christmas use.

NOVEL PICTURES.—A curious device, whereby pictures of various kinds are burnt out on a piece of ordinary-looking rose-colored paper, has been brought out by a Berlin merchant, Herr Bergel. You apply a glowing match at two finely perforated points, and the sparks communicated then begin gradually to move over the paper, working out the picture. Neither leaves its proper path, or injures the paper beyond, and when the end of the path is reached, the spark goes out. A negative and a positive are thus obtained, after the manner of silhouettes. The contrivance proves entertaining, and may be employed for educational purposes.

HOW ANCIENT AUTHORS WROTE.—At the present day the author usually writes with his own hand, in the confidence that the printer will not only furnish him any number of copies, but also a convenient form for revision. The ancient author was compelled in order to get out an early edition to dictate to a number of scribes, who were called *amanuenses notarii*, or "rapid writers," corresponding to the shorthand writers of the present day. The work of these was revised by trained hands, styled in Greek *Kalligraphoi*, and in Latin *Librarii*, or "fine writers," and their work then passed on to the *bibliographoi*, or "copyists." St. Paul in the first chapter (v. 20) of his Epistle to the Galatians (generally susposed to have been the first he wrote) expressly states that it was written with his own hand: "Now the things which I write to you." At the close of his Epistle to the Romans the name of his amanuensis is included thus: "I, Tertius, who wrote this Epistle."—*Paper and Print.*

An alloy, containing 70 per cent. of copper and 30 per cent. of manganese has been produced by a German firm, which uses it as an addition to brass or bronze for increasing the density, tensile strength, and ductility of these metals. The manganese, by its ready oxidation in the process of manufacture, prevents the formation of oxides of copper or tin, which in ordinary practice impair the value of the product. The same parties likewise recommend the use of metallic manganese for the same purposes, and affirm that the addition of as little as ¼ to 1 per cent. of metallic mangauese, or of ¾ to 3 per cent. of the manganese-copper alloy, will insure in every case a solid casting. The addition of a larger percentage of manganese is said to have the effect of hardening the metal; and bronze, with such addition, can be made to assume a hardness approaching that of steel.

NEW PROCESS OF ENGRAVING AND PRINTING.

COPPER PLATES vs. LITHOGRAPHY.

Advantages of this Process over Stone Work:

A CLEAR SHARP IMPRESSION—AS METAL IS HARDER THAN STONE.
THE PAPER RETAINS ITS GLOSS—NO DAMPING REQUIRED.
WE PERFORATE EVERY BLANK WE PRINT BY OUR ROTARY MACHINE.
OUR NEW DESIGNS ARE ALL ORIGINAL AND FINELY EXECUTED.
WE USE NOTHING BUT HEAVY TUB-SIZED FIRST-CLASS PAPER.
EACH BOOK IS STRONGLY BOUND AND EVERY HALF DOZEN PUT UP IN BOXES.
OUR PRICE IS MUCH LESS THAN LITHOGRAPHIC WORK.

NOTES, DRAFTS, RECEIPTS, ORDERS, CHECKS, &c., by the above Process, and also from STEEL PLATES.
Designed and Manufactured especially for Stationers.

—MANUFACTURERS OF—

Time Globes, Relative Time Globes, Tellurians, Celestial,

AND VARIOUS FORMS OF TERRESTRIAL GLOBES.

The **Time Globe**—see illustration—is not only a perfect geographical globe, but is also a time piece, each part working independent of the other and perfect in both. By means of internal mechanism the Globe is made to revolve once in twenty-four hours—as does the earth. **Universal Time** is obtained **without computation.** It is a **Stem Winder, regulates** from the **outside,** and runs four days without rewinding. Sizes, 6, 12, 18 and 30 inches. Prices $75 to $600, according to size and style of mounting.

The **Relative Time Globe,** while capable of performing **all** the problems of the ordinary **Globe,** gives in addition **Universal Time without computation.** Sizes, 6, 12, 18 and 30 inches, Prices, $35 to $300, according to size and style of mounting.

Tellurians, Celestial and **Terrestrial Globes,** so mounted (new designs) that no part of the map is hidden from view. Sizes, 6, 12, 18 and 30 inches. Prices, $3 to $250.

Above described Globes are **all** made of a new material, which, unlike the old plaster and clay Globes, will not fracture; in fact the shell is so strong and well made that it will be economy to recover in case of geographical changes or injury to the map.

All full Meridian Ring Globes are mounted with swiveled clutch, which allows them to be placed at any desired angle. None but the latest and most perfect maps used.

Meridian Rings are of **Brass,** and **carefully** graduated.

ALL ORDERS WILL RECEIVE PROMPT AND CAREFUL ATTENTION.

☞ NOW READY. ☜

THE PAPER TRADE IN THE CITY OF NEW YORK.

[Continued.]

One of the best known men in the paper trade to-day, as well for his long connection with it as for his genial and kindly nature, is Effingham Embree, agent of the American Wood Paper Company. Mr. Embree's connection with the trade extends back nearly fifty years and covers the most eventful period of its history. In fact, it may be said that he and the paper trade of this city were born about the same time and that they have grown up together.

Mr. Embree was born in this city in 1818, in Chestnut street, a byway almost unheard of by the present generation, it having been obliterated by the opening of New Bowery and New Chambers streets. His connection with the paper trade began at fourteen years of age, in 1832, when he went as a clerk with Caleb Bartlett at 76 Bowery. Bartlett, whose history has already been published in this series of articles, was more properly a stationer, bnt he also dealt, to some extent, in wrapping and other papers.

In 1840 he left Bartlett, and in conjunction with his brother, A. Embree, he went into the book and stationery bnsiness at 262 Greenwich street, under the firm name of A. & E. Embree. In this venture the brothers bought ont a business that had been established by N. B. Holmes and carried on after him by Doolittle & Vermilyea. After a while Effingham Embree sold out his interest in this bnsiness to his brother and bonght the stock, good will, &c., of a man named Bleakley, who was carrying on a book and stationery store in Hudson street. In this ventnre, however, Mr. Embree was unsuccessfnl, and he subsequently became a clerk with E. B. Clayton & Sons, at 2 Burling Slip, who a few years before had purchased the paper commismision business of Ahbott & Whitcomb. He remained with them abont two years, when, his younger brother, L. H. Embree, having made preparations to go into the book and stationery bnsiness at 134 Bowery, he left to join him, and the business was carried on in the name of E. & L. H. Embree.

This partnership did not last very long, and Effingham Embree, after being for a year with S. Raynor, who by this time had succeeded to Caleb Bartlett's business at 76 Bowery, returned to E. B. Clayton & Sons, then at 83 John street. When Mr. Embree left Clayton & Sons two or three years before he was succeeded by Melvin Hard, and by a curions coincidence, in returning, he came as the successor to Hard, who left to form the copartnership of Carson & Hard. His second connection with E. B. Clayton & Sons lasted about eight years, and he finally left to enter the rag and paper business with Thomas Jackson and the latter's son, Wm. A. Jackson, as Jackson, Embree & Co. The firm was forced to suspend by the crisis of 1857, but it subsequently wound np its affairs and paid all of its debts.

Subsequently, Mr. Embree was, in the order named, with White & Sheffield, Broman & O'Connor, and Jessnp & Moore. In 1867, he became the agent in this city of the American Wood Paper Company which has extensive pulp works in Manayunk, Pa., producing 20 tons of chemical fibre in 24 hours, and paper mills in Spring City, Pa., producing 7 tons a day of envelope, card, writing and wrapping paper. His office is in the Morse Building, 140 Nassan street.

Notwithstanding his long service in the paper trade, Mr. Embree is yet hale and active and indeed looks a younger man by at least fifteen

years. His companionable nature and hearty good humor have made him a host of friends.

In November, 1847, George W. Carson, one of the several sons of David Carson, who, in conjunction with Zenas Crane, started the first paper mill at Dalton, Mass., came to this city and formed a copartnership with Melvin Hard, who was then bookkeeper for E. B. Clayton & Sons. The name of the firm was Carson & Hard. It began business at 281 Pearl street and dealt at first principally in writing papers. Mr. Carson's brothers were then among the foremost paper manufacturers of Dalton, and previous to the beginning of Carson & Hard had a consignment account of writing papers with E. B. Clayton & Sons. This account was then withdrawn and placed with Carson & Hard. Several months later this firm extended its dealings to other kinds of paper. In 1850 the place of business was moved to 44 Beekman street, and there the firm prospered for a number of years.

Like most other dealers of that day, Carson & Hard were soon drawn into manufacturing. About 1856 they built a mill at Morristown, N. J., for the manufacture of binders' boards, and produced about two tons of that commodity per day. At the same time, through advancing money to the owners, they had become interested in a mill at Balston Spa, turning out one ton of straw paper per day. They were sole agents, too, for the writing papers of the Green Mountain Mill, at Bennington, Vt. Their sale at this time amounted to about $300,000 a year, which was a pretty good business for that day.

The crisis of 1857 forced them to suspend, but they afterwards paid dollar for dollar and interest.

In 1860, however, they suspended again during the period of depression and uncertainty that preceded the outbreak of the war. This last suspension resulted in the dissolution of the firm. The stock was advertised for sale and was bid in for about half its cost by A. P. Hard, a brother of Melvin Hard. Melvin Hard continued the business in his brother's name, but some years later resumed in his own name. He died suddenly of pleuro-pneumonia in January last, and his sons, of whom notice will be made in a subsequent article, succeeded him, and are now doing business at the same stand, 25 Beekman street.

George W. Carson, after the failure of the firm, went with L. T. Valentine, who was then doing business at 47 Beekman street, and remained with him three years. Subsequently he filled various positions in the trade, and eventually began business again on his own account. He is now at 185 William, dealing in wax paper, which is thin paper saturated with paraffine and used for putting up confections, tobacconists' articles, and other purposes.

Mr. Carson, as already intimated, is one of a celebrated family of paper makers. He is now in the neighborhood of sixty, and was born in Dalton, Mass., in the house now occupied by Byron Weston, the Lieutenant Governor of the State. Singular to relate Mr. Weston's paper mill is also built upon the site of one of David Carson's mills.

[To be Continued.]

He who in the same given time can produce more than many others, has vigor; he who can produce more and better, has talents; and he who can produce what none else can, has genius.

Aim at perfection in everything, though in most things it is unattainable; however, they who aim at it, and persevere, will come much nearer to it than those whose laziness and despondency make them give it up as unattainable.

—THE—

Young Artist Blackboard

AND EASEL COMBINED.

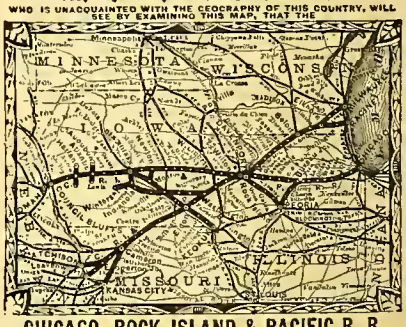
A MAN

WHO IS UNACQUAINTED WITH THE GEOGRAPHY OF THIS COUNTRY, WILL SEE BY EXAMINING THIS MAP, THAT THE



CHICAGO, ROCK ISLAND & PACIFIC R. R.

IS THE GREAT CONNECTING LINK BETWEEN THE EAST & THE WEST!

Its main line runs from Chicago to Council Bluffs, passing through Joliet, Ottawa, La Salle, Tonoson, Moline, Rock Island, Davenport, West Liberty, Iowa City, Grinnell, Des Moines (the capital of Iowa), Stuart, Atlantic, and Avoca; with branches from Bureau Junction to Peoria; Wilton Junction to Muscatine; Washington, Fairfield, Eldon, Bellevue, Centerville, Princeton, Trenton, Gallatin, Cameron, Winterset, Audubon, and Avoca to Washington to Shenandoah, Oakland, and Nodaway; Kirkwood to Farmington, Bonaparte, Keosauqua, Independence, Winfield, Mount Pleasant, Fairfield, Ottumwa, Eddyville, Albia, Knoxville, Pella, Monroe, and New Sharon; Nevada to Colo, Ames to Boone, Des Moines to Indianola and Winterset; Atlantic to Lewis and Audubon; and Avoca to Harlan. This is positively the only Railroad, which owns, and operates a through line from Missouri to Kansas.

Through Express Passenger Trains, with Pullman Palace Cars also Horton Reclining Chair Cars, run daily between CHICAGO and PEORIA, KANSAS CITY, COUNCIL BLUFFS, LEAVENWORTH and ATCHISON. Through cars also run between Milwaukee and Kansas City, via the "Milwaukee and Rock Island Short Line."

The "Rock Island" is magnificently equipped. Its road bed is simply perfect, and its track is laid with steel rails.

What will please you most will be the pleasure of enjoying your meals, while passing over the beautiful prairies of Illinois and Iowa, in one of our magnificent Dining Cars that accompany all through Express Trains. You get an entire meal, as good as is served in any first-class hotel, for seventy-five cents.

Appreciating the fact that a majority of the people prefer separate apartments for different purposes (and the numerous passengers desirous of this fine car, and the fact that we are pleased to announce that this previously unoccupied Palace Sleeping Cars for sleeping purposes, and Palace Dining Cars for eating purposes only. One other great feature of our Palace Cars is a SMOKING SALOON where you can enjoy your "Havana" at all hours of the day.

Magnificent Iron Bridges span the Mississippi and Missouri rivers at points crossed by this line, and transfers are avoided at several points, between Chicago, Council Bluffs, and Atchison, connections being made in Union Depots.

Direct PRINCIPAL R. R. CONNECTIONS OF THIS GREAT THROUGH LINE ARE AS FOLLOWS:

At Chicago, with all diverging lines for the East and South.

At Englewood, with the L. S. & M. S. and P. Ft. W. & C. R. Rds.

At Washington Heights, with P. C. & St. L. R. R.

At La Salle, with Ill. Cent. R. R.

At Peoria, with P. P. J. & D. & E. & I. R. R. & W. Ill. Div., and W. P. & W. Rds.

At Rock Island, with Milwaukee & Rock Island Short Line, and Rock Isl'd & Pac. Rds.

At Davenport, with the Davenport Division C. M. & St. P. R. R.

At West Liberty, with the B. C. R. & N. R. R.

At Grinnell, with Central Iowa R. R.

At Des Moines, with D. M. & D. M. R.

At Council Bluffs, with Union Pacific R. R.

At Omaha, with B. & Mo. R. R. in Neb.

At Columbus Junction, with R. C. R. & N. R.

At Ottumwa, with Central Iowa R. R.; W. St. L. & Pac., and C. R. I. & P. Rds.

At Moberly, with Wabash, St. Louis & Pac., and St. L. K. & N. W. Rds.

At Glasgow, with St. L. K. & N. W. R. Rd.

At Atchison, with Atch., Topeka & Santa Fe; A. T. & S. F. and Cent. Br. U. P. Rds.

At Leavenworth, with Kan. Pac. and Kansas R. Roads.

At Kansas City, with all lines for the West and Southwest.

PULLMAN PALACE CARS are run through to PEORIA, DES MOINES, COUNCIL BLUFFS, KANSAS CITY, ATCHISON, and LEAVENWORTH. Tickets via this Line, known as the "Great Rock Island Route," are sold by all Ticket Agents in the United States and Canada.

For information not obtainable at your home ticket office, address,

BYRON WESTON

DALTON, MASS.,

HAS BEEN AWARDED THE

GRAND PRIZE GOLD MEDAL

AND RECOMMENDED THE

Medal of Honor and Perfection

At PARIS, 1878,

This being the **HIGHEST and ONLY AWARD** given for

LINEN RECORD and LEDGER PAPER.

—A SPECIALTY.—

THIS Paper has received THE HIGHEST PREMIUM over all others from *the Cincinnati Industrial Exhibition, Massachusetts Charitable Mechanics' Association, Franklin Institute* of Philadelphia, Louisville Exposition, Medal and diploma from *United States Centennial Commission, Medal of Progress American Institute, 1877, and Medal of Improvement and Progress, Boston, 1878.* Its

PRINCIPAL ADVANTAGES

are as follows:—1. It contains more LINEN than any other Ledger Paper, has a longer fibre, and is, consequently, tougher. 2. Having a harder and better body, it frays less in erasure, so that by simply using the rubber after the eraser, the ink is prevented from spreading. 3. It is more uniform in Weight Color and Finish. 4. It never cockles if properly bound. 5. Its chemical action upon ink is such that it both writes and rules up better. For proof of the foregoing, refer to a large number of Stationers, Bookbinders, Bookkeepers, and Recorders, who have given it, after a severe test, the preference over all others. This paper is *Double Sized*, and will stand any climate or the most acid of fluid inks.

☞ **Send for sample sheet, ERASE and REWRITE FOUR TIMES on same spot.**
Each sheet is water-marked with name and date.

LOCKWOOD PRESS, 74 Duane Street, New York

The American Stationer

A Journal Devoted to the Interests of the Stationery & Fancy Goods Trades

REDMAN & KENNY, N.Y.

"The Stationer"—Every Thursday—$2.00 Per Annum.

VOL. IX.---NO. 2. NEW YORK, JANUARY 13, 1881. WHOLE NO. 290.

Correspondence.

BOSTON NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

BOSTON, Mass., January 10, 1881.

January is a month in the year that offers very little new in the stationer's line, trade pursuing the even tenor of its way, but in limited volume. Dealers report that they are now selling only for immediate wants, and mostly staple goods at that. However, the general business aspect is satisfactory for the season of the year.

Departments of trade, like everything else that deals in money, in profits, or losses, have their peculiarities or distinguishing characteristics. For instance, those of the older citizens of this city who have watched the course of trade during the past twenty-five years cannot fail to have observed that, while some firms dealing in the same kind of merchandise have progressed or kept abreast with the times and its imperative demands, others have lagged behind, even in the style of their show windows, only to find themselves doing a smaller volume of trade than they otherwise would have enjoyed. There are half a dozen such houses as this in Boston. Figuratively speaking, the accumulated dust of years still lies upon the upper shelves of their stores. Still these firms manage to keep all their old customers and acquire some new ones.

On the other hand, even some of the oldest firms in the stationery trade here are as thoroughly imbued with the wants and improvements of the times as are those who have been in business only a few years. One firm which, for almost one hundred years has been in the stationery business, remained on State street until the trade gravitated further up town, when it removed there, too, and now it finds itself right in the centre of the trade and occupying, in some respects, the most spacious and convenient quarters of any stationer's house in the city, and doing a much larger business than ever.

Of late years there has been a disposition among some stationers to gradually get out of the real staple line of goods, such as account books, &c., and deal more largely in the lighter lines of goods, from which, especially during the holiday season, a large profit is made. One house in the city during the past year seems to have done an immense business in this respect, and during the holiday season no large retail establishment was more crowded with customers than was the one referred to, although it was located on a side street and did not offer goods specially at retail. But by systematic and persistent advertising the concern kept its spacious store filled with customers who always got good bargains.

The art novelty makers say that the immense importations of English and German cards has produced no perceptible effect upon the sale of American goods of the same description; but, on the contrary, American cards, with their more appropriate subjects and ideas, have sold in larger volume than ever before in the history of the business, or when the first sale of such cards aggregated less than 100,000 in the second year of their production.

The run on new calendars and advertising cards continues. Some specimens of the former are among the finest productions of the art preservative. The Chicago, Rock Island and Pacific Railroad calendar is the prettiest of the year, although that of the Inman steamship line is not far behind it.

The Massachusetts Legislature, just organized, has made a raid on a leading stationery house, for every member has got a new knife, a big pile of writing paper, and envelopes to match, to say nothing of pens, pencils and things. L.

BALTIMORE NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

BALTIMORE, Md., January 11, 1881.

Snow and slush and sleet have been the order of the day since the first of the year, and business, in consequence, has been extremely quiet. No one grumbles, however. The holiday trade, as I stated, I believe, in a former letter, was better than for many years past, and storekeepers can afford to rest on their oars until such time as the weather—and with it trade—brighten up.

The old and well known firm of D. W. Glass & Co., paper dealers and manufacturers, has been dissolved, and a new firm formed under the firm name. The new house consists of D. W. Glass and W. G. W. Graham as general partners, and Wm. H. Evans as special partner. The partnership is for five years. Mr. Graham, who thus associates himself with Mr. Glass, the founder of the house, had been with M. J. & W. A. Brown for nearly twenty years; and Mr. Evans is of the firm of Howard & Evans, and also at the head of the firm of W. H. Evans. As special partner in the house of D. W. Glass & Co. he contributed $20,000 in actual cash as capital to the common stock of the new partnership.

John B. Piet is making many changes in his catalogue of prayer books for the coming season. The list will be very attractive when completed.

J. W. Borst & Co., printers and publishers, now occupying the warehouse No. 9 South Charles street, will shortly move to the new fireproof building on the corner of Howard and Baltimore streets, and will add to their present business a line of stationery, paying special attention to the manufacture of blank books.

The trade here is in receipt of Samuel Raynor & Co.'s (envelope manufacturers) revised catalogue for 1881, in which many reductions are apparent, owing, no doubt, to the fact that paper is lower than when the last catalogue was issued.

The copartnership heretofore existing under the firm name of Stork, Phipps & Co., has been dissolved by mutual consent, J. B. Phipps retiring. Wm. L. Stork and Frederick W. Koch, who have formed a new partnership, under the style of W. L. Stork & Co., will assume all the liabilities of the old house and collect all outstanding debts. Mr. Phipps, in a card, solicits for the new firm the continued patronage of his friends.

T. Newton Kurtz, one of the best known publishers, died at his residence, in North Baltimore, just outside the city boundary, on Sunday last, from the effect of a stroke of paralysis received last May. He was fifty-nine years old.

The following named representatives of the trade have been in town this week: H. P. Beach, New York Blank Book Company; W. W. Werninger, of Wm. M. Christy's Sons, publishers Waggener's Trial Balance Books, Philadelphia; A. J. Schad, of John Gladding & Son, blank book manufacturers, Philadelphia; Chas. Small, of D. & P. Lawrence, New York; Z. A. Devoll, of the Niscochague Manufacturing Company, Philadelphia; and J. F. Hitchcock, of the Morgan Envelope Company, of Springfield, Mass.

W. P. M.

PHILADELPHIA NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

PHILADELPHIA, Pa., January 12, 1881.

Valentines for this year are generally more numerous and superior to those of preceding years. I think it will interest the trade if I make a rapid review of those houses in this city which specially attract attention in this line.

Thos. S. Dando & Co. are meeting with a great demand for goods of this class published by De La Rue. Following are descriptions of some of these goods: No. 263¼ A, "Scented Reticule," with padded front, mounted with an exquisite satin chromo lithograph of "Budding Beauties," lined silk, and with silk cord edging, bows and suspenders, each packed in a neat box, with ornamental gold label bearing a suitable inscription, in three varieties, $14; No. 263¼ B, "Pin Cushion," mounted with an exquisite satin chromo lithograph of "Budding Beauties," with silk cord edging and bows, each packed in a neat box, with ornamental gold label bearing a suit-

able inscription, in three varieties, $10.50; No. 263¼ C, "Silk Sachet," scented and mounted, with an exquisite satin chromo lithograph of "Budding Beauties," with silk cord edging, each packed in a neat box, with ornamental gold label bearing a suitable inscription, in three varieties, $10.50; No. 250 D, "Cupids at School," delicately executed chromo lithographs of cupids under tuition of Love, three varieties, $1.20; No. 176 D, "Cynthia's Beams," carefully executed lithographs, after original water color drawings, of lovers paying their vows by moonlight, each picture illustrated by an original couplet of a suitable character, three varieties, $1.20; No. 249 D, "Hearts are Trumps," pleasing chromo lithographs, after original water color drawings, of couples engaged in play, three varieties, $1.20; No. 139 D, "Cupid's Minstrels," chromo lithographs, in gold and colors, with appropriate mottoes and music, three varieties, $1.10; No. 78 D, "Cupid's Sports," delicately executed lithographs, in gold and colors, of cupids playing with flowers, three varieties, $1.10; No. 140 D, "Love's Pondering," delicately finished chromo lithographs, in gold and silver colors, representing a garden with faces in every flower, three varieties, 80c.; No. 137 D, "Love's Nestlings," richly wrought chromo lithographs, in silver and colors, representing cupids in a basket, three varieties, 50c.; No. 254 D, "Caterwauliug," comic chromo lithograph of an evening serenade by Mr. Thos. Cat, three varieties, 50c.; No. 255 D, "Thorny Subjects," comic chromo lithographs of two hedgehogs at play, three varieties, 50c.—all per dozen.

Marcus Ward & Co. have as yet only samples of the new goods manufactured by the London house, as they have just received their consignments, which have not yet passed the Custom House. Mr. Freeland has nevertheless been able to show me the handsomest valentines that he will have this year. Among these I have remarked the following: No. 2,051, young ladies in a pretty design, with a legend, 5c. apiece; No. No. 2,071a, the seasons, four designs, 5c.; No. 2,087, country boys, three designs, 5c.; No. 3,027, cupids, with legend, 7c.; No. 4,056, flowers and birds, three designs, 10c.; No. 4,029, flowers, three very rich designs, 10c.; No. 4,080, children (Kate Greenaway), three designs, 10c.; No. 4,005, flowers and children, three designs, 10c.; No. 4,038, very graceful design, with valentine legend, 10c.; No. 5,015, flowers, with poetry, three designs, 15c.; No. 6,051, Shakespearean sonnets, four designs, 20c.; No. 12,085a, very elegant valentine and rich design, 35c.; No. 4,090, Cupids and butterflies, three designs, 50c.; No. 18,037, Eastern girls (mounted), four designs, 50c.; No. 18,040, card on easel, opening forward, picture inside representing the seasons, outside flowers; gilded ground; this is a very elegant valentine, 50c.; No. 30,050a, sachet, children and legend, $1 a pair; No. 42,039, sachet, legend and flowers inside, outside drawing by Kate Greenaway, $1.25 a pair; No. 60,039, sachet, picture on satin outside, inside picture by Kate Greenaway, $2 a pair.

Charles Beck has an assortment of combination valentines altogether new, costing from 5 cents to $1 each. The valentines are put up in very pretty envelopes. The trade will find among them some veritable little *chefs d'œuvre*, and the demand for them is likely to be very good. The imported box valentines which cost from 25 cents to $7 each, are also charming, and they are selling fast. Among these imported box valentines are some with wax figures perfectly made; others contain South American birds, and in the most expensive boxes are presents, such as bottles of perfumery, handkerchiefs, flowers, &c. Mr. Beck's stock is now very limited. He will furnish sets of samples at list price.

The enterprise of a firm is shown by its works. No better evidence of this can be offered than the elegant new valentines now published by L. Prang & Co. Mr. Kimball, the manager of this firm's branch office in this city, exhibits a laudable pride as he talks up the new line. There was such a demand for fringed goods during the Christmas season that many of the valentines are put up in that way, the fringe being made expressly for the purpose for this firm. The line consists of eighteen varieties, but by various different arrangements of the cards the amount is actually nearly doubled. The cards will retail for from 3 cents to $2 each. A very good description of the goods will be found in the advertisement of the firm. Two much cannot be said in their praise. For years the market has been and still is flooded with cheap lace paper affairs, with more or less sickening sentiments thereon, and it is a pleasure to look at something which is artistic in design and to be able to send a card to a friend expressing love and affection without descending into a maudlin sentimentality which only tends to produce nausea. I have no doubt that if St. Valentine was now among us he would clap his hands with joy at the very marked improvement in the way of celebrating his "day." Mr. Kimball thinks that even the sparrows outside his office window would begin to "court" if they saw his goods.

JULES VIENNOT.

MICHIGAN NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

DETROIT, Mich., January 3, 1881.

Notwithstanding the immense sales made by the several wholesale and retail book and stationery stores for Christmas presents, one would hardly notice the difference in the appearance in the stocks of several firms, notably the wholesale houses of Richmond, Backus & Co. and Thorndike Nourse. It will be clearly understood that when I say that, by judicious ordering of goods by Mr. Backus for his immense blank book business to supply the various railroad offices and large manufacturing establishments which are now seen in this city, and for the retail trade and legal profession by Mr. Ayers, also works of art and large stock of imported books ordered by Mr. Nourse, and other miscellaneous stock by his valuable assistants, Mr. Lapham and the genial Macfarlane, they have been enabled to put in their numerous showcases and upon their shelves and counters a new and complete stock of everything pertaining to a well regulated establishment, and are still selling at prices that are bound to dispose of the goods, despite the cold weather during the last days of the old year.

Cornwell Brothers, proprietors of the mills at Ypsilanti, have built a new pulp mill at "Geddes," a station on the Michigan Central Railroad, half way between Ypsilanti and Ann Arbor, and which they propose to run in connection with their mills at Ypsilanti.

The firm of Cornwells, Price & Co., of Detroit, presented a five dollar bill to each of its employees as a Christmas gift, which the boys appreciated.

It is said that a new paper mill will be built at Howell, a village some fifty miles from Detroit. An experienced paper maker has pronounced this location one of the finest in the State for a paper mill. It is hoped by some that vigorous measures will be taken to secure articles of incorporation and push it to completion. Manufacturing establishments of various kinds are growing up all around us of late, and inducements are held out to capitalists to build in Detroit and vicinity.

The Lansing *Republican* publishes a table of the school census of the State, showing that there are 506,221 children of school age in Michigan, an increase of 19,228 over 1879. This is interesting to those who supply school books, and also speaks volumes for the productiveness of our State.

Minchin Brothers, formerly proprietors of the Reed City *Clarion*, have bought the Evart *Review*, and took possession on Saturday last.

I noticed some new games sent here by the well known representative of McLoughlin Bros., of New York, J. R. Black. They are known as the Japanese games of "Mon," "Blind Pilgrims" and "Cash." They are played on the Mon board, arranged by Edward Greey, author of "Blue Jacket," "Through the Heart of Japan," "A Trip to Tokio," &c. The game of Mon (crest or coat of arms) is a mimic battle, typical of the ancient struggle between the armies of the Heike (Red) and Genji (White) factions that for many years kept Japan in a state of civil war. Mon is totally unlike any other game, and though at first glance it may appear somewhat difficult it is very easy to learn. There are sixty-six red spaces in the board and thirty-six white spaces. The board on which this game is played is original, and the designs are done in a masterly manner. Only two persons can play this game. "Blind Pilgrims" is a very entertaining pastime, in which two, three or four persons can play. There are twenty-eight men in four colors. "Cash" is also a delightful fund of amusement, having banks, watchmen, safes, treasury, sixteen men, each set colored. Of course, my readers will understand where the fun comes in at is to get all the cash off the board and into the pocket. It ought to be perfectly safe then. No pains have been spared to make these new games explicit and clear as possible, even to the minutest detail.

Unbounded prosperity has characterized the business in Detroit during the past year, and manufacturers and large wholesale and retail establishments who have capital, and those who have of late added somewhat to their capital, report that sales have increased from 25 to nearly 50 per cent. over the year 1879, and from recent statements all seemed in the best of spirits at the close of 1880, although pretty well used up by the rush during the holidays.

No changes are rumored that I have heard of in this conservative city; all seemed inclined to "hold the fort," although, in some instances, I hear of clerks and salesmen having had an advance in their salaries, which seemed to stir them up to greater activity and interest for their employers.

The Michigan drummers have elected the well known Mr. Matthews, the traveling agent for Richmond, Backus & Co., as president of the Michigan Commercial Travelers' Association. This association, it is stated, has nearly $4,000 in its treasury. Mr. Matthews has long been a resident of this city, and is well known all over the State. It is needless to state I congratulate him on being elected to such a position.

I will close this letter with the remark that, perhaps, there has never been a more satisfactory or prosperous year in the career of any nation than the year 1880 has been for the American people. It will be memorable for peace, progress and prosperity, and it has left with us a promise of a continuation of these blessings during the year 1881. CITY OF THE STRAITS.

OLD BERKSHIRE MILLS

DALTON, MASS., U. S. A.

One party writes: 'The two hundred RECORD BOOKS, for 83 of the 99 Counties, now on exhibition at the Iowa State Fair, at Des Moines; and all, but four (!) of them, made from your 'OLD BERKSHIRE MILLS LINEN LEDGER,' Medium, 40lb., make a splendid show.''

[The above cut is a fac-simile of the wrapper used on the Linen Ledger Paper.]

We will pay for any book rejected on account of fault in the paper. Send for Samples, test them in comparison, and see that your books are made from paper thus water-marked.

OLD BERKSHIRE MILLS

LINEN LEDGER PAPER

Will stand the severest test of COLOR, CLIMATE, INK OR WEAR.

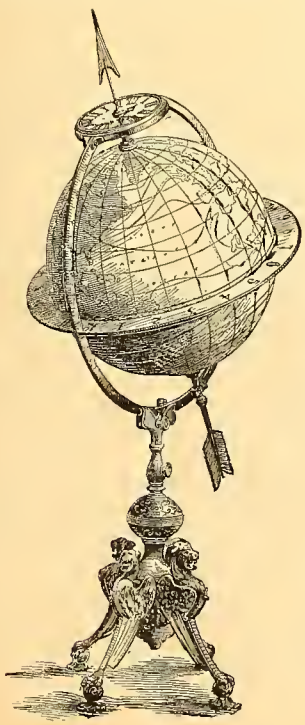
Being **Triple Sized** (a process entirely our own) and **Loft Dried**, can be erased and written upon the fifth time distinctly. None genuine without the water-mark and date, thus—**Old Berkshire Mills Linen Ledger, 1880.**

CARSON & BROWN CO., Manufacturers.

CANAJOHARIE, N. Y. JUVET & CO., CANAJOHARIE, N. Y.

—MANUFACTURERS OF—

Time Globes, Relative Time Globes, Tellurians, Celestial,



AND VARIOUS FORMS OF TERRESTRIAL GLOBES.

The **Time Globe**—see illustration—is not only a perfect geographical globe, but is also a time piece, each part working independent of the other and perfect in both. By means of internal mechanism the Globe is made to revolve once in twenty-four hours—as does the earth. **Universal Time** is obtained **without computation.** It is a **Stem Winder, regulates** from the **outside,** and runs four days without rewinding. Sizes, 6, 12, 18 and 30 inches. Prices $75 to $600, according to size and style of mounting.

The **Relative Time Globe,** while capable of performing **all** the problems of the ordinary **Globe,** gives in addition **Universal Time without computation.** Sizes, 6, 12, 18 and 30 inches, Prices, $35 to $300, according to size and style of mounting.

Tellurians, Celestial and **Terrestrial Globes,** so mounted (new designs) that no part of the map is hidden from view. Sizes, 6, 12, 18 and 30 inches. Prices, $3 to $250.

Above described Globes are **all** made of a new material, which, unlike the old plaster and clay Globes, will not fracture; in fact the shell is so strong and well made that it will be economy to recover in case of geographical changes or injury to the map.

All full Meridian Ring Globes are mounted with swiveled clutch, which allows them to be placed at any desired angle. None but the latest and most perfect maps used.

Meridian Rings are of **Brass,** and **carefully** graduated.

ALL ORDERS WILL RECEIVE PROMPT AND CAREFUL ATTENTION.

L. PRANG & CO.'S

Valentines for 1881.

We take pleasure in herewith presenting to the trade our Price List of Valentines for this Season:

ASSORTMENT.—Our Valentines are made up in sets of one dozen, except Series 1, where six constitute a set, and are put up in a box or envelope. Each set contains all the designs of the series; and as no series has more than six designs, each design is more or less repeated in the set.

ENVELOPES.—Fine Cream-Tinted Envelopes are furnished with every series, except Nos. 9, 11, 15, 16, 17, without extra charge.

VALENTINES WITH SILK FRINGES.—We would call especial attention to these, as they will doubtless prove very attractive. These goods are made up with the best quality heavy silk fringe, made expressly for us. All fringed Valentines are furnished with protectors and envelopes, and are put up with assorted colors of fringes.

LIST OF PRANG'S VALENTINES FOR 1881.

Trade Novelties.

[We will be glad to receive samples of all novelties issued in the trade, and will notice all such which possess merit free of charge. It is desirable to accompany descriptions with cuts whenever possible.]

NEW PATENTS.

No. 235,815. Machine for Making Slate Pencil Sharpeners.—Ferdinand Rheydt, Chicago, Ill.

The knives of a pencil sharpener are imbedded in the inner part of a wooden cylinder in an inclined position in the following manner: The cutting edges are placed in grooves made in the surface of a metal cone placed upon an anvil and surrounded by a ring. The wood cylinder is then driven by a plunger over the cone, being guided in its descent by the ring.

No. 235,821. Method for Forming the Bending Lines in Paper Boxes.—John E. Stannard, Springfield, Mass.

An improvement in preparing cardboard for the manufacture of paper boxes and analogous articles, which consists in softening and rendering flexible the folding line portion of the card board, by the forcible reduction of the width of the sheet transverse to the direction of the folding line.

No. 235,898. Stylus for Writing on Manifold Paper.—Lebbeus H. Rogers, New York, N. Y.

A stylus or writing point comprising a metal cylinder of uniform diameter, bored longitudinally from one end to receive a handle, and having projecting from the other end a blunted metallic writing-point of smaller diameter than said cylinder, and made integral or in one piece with it, a shoulder being formed at the junction of the two parts.

No. 235,951. Game Board.—Phineas Lawrence, London, county of Middlesex, England. Filed October 15, 1880.

1. A combination game board constructed as described, upon which checkers, backgammon and similar games can be played by the use of movable pins in lieu of ordinary checker-men, and dials with revolving pointers in lieu of dice and dice cups. 2. A game board adapted for playing, scoring and marking backgammon by means of dials with pointers and movable pins, in combination with other dials having revolving pointers for marking and scoring whist, écarté, bézique, cribbage and similar games. 3. In a game board a removable circular cribbage board marker, having a circumferential border bearing the requisite emblems or serial numbers, in combination with revolving pointers. 4. A game board provided with a removable circular cribbage board, having an outer circumferential border of numerals and another inner sunken circumferential border of numerals, in combination with independent revolving pointers supplied with knobs or studs. 5. A game board, one surface of which is adapted for playing backgammon by the use of movable pins or pegs, in combination with dials having peripheral numerals or emblems and pivoted revolving pointers, the reverse surface of which board is adapted for playing checkers or chess, and having dials for scoring or marking the progress of whist, écarté, bezique and similar games. 6. A combination portable game board for playing, marking and scoring games, constructed and arranged so that the several devices for cribbage, bezique and similar games are severally separable from the main board, and adapted to admit of several games being played independently at the same time by the separate use of the removable parts.

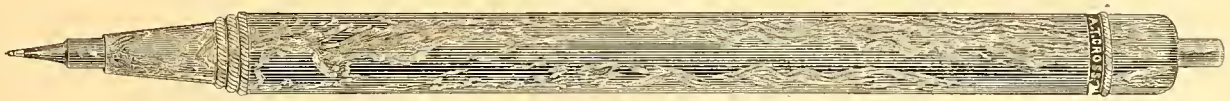
☞ NOW READY. ☜

PERFECTED STYLOGRAFIC.

The original and genuine Pen. Warranted the best made. Thirteen Patents granted to **A. T. CROSS,** the last, June 29, 1880, being the most important and giving the name **Perfected.** All cuts are exact size



MAXIMUM.—Holds most ink of any pen made; tires the hand less than smaller barrels. Fits Hambler's Pocket. Same price as Long.

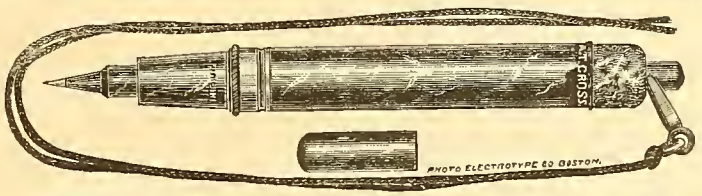
LONG.—The famous Desk Pen. Extra long. Holds most ink, except the **Maximum.**

SHORT.—Most widely known and sold heretofore; but Maximum is better for desk

or Hambler's Pocket, Giant for Vest Pocket or Cord. So this will be largely superseded.

Thirteen patents granted; seven more applied for; more genuine improvements; better record; more styles; larger stock; more thoroughly protected by patents than all rivals combined.

☞See Descriptive Circulars.



GIANT, with Cord and Gold Ring, same price as Short.

Dealers and agents supplied with wood, glass and paper signs, placards, circulars, leaflets and cuts. We make both largest and smallest Pens, both of which will have all new improvements.

☞See Descriptive Circulars

VEST GIANT, Plain, - - $2.50.
All Styles up to $4.00.

☞ **VEST GIANT.—The Cheapest PERFECTED Pen made.**

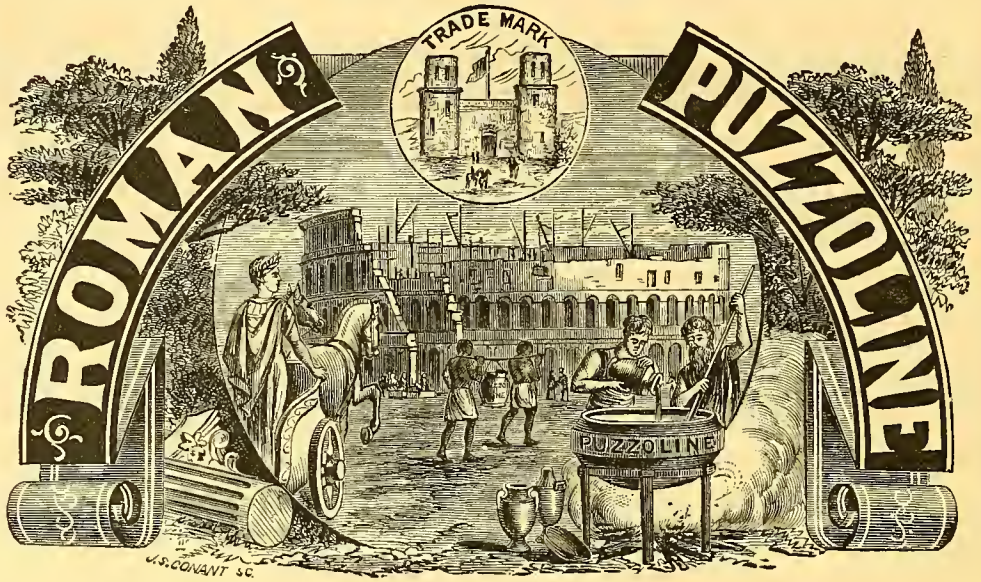
Sole Proprietors and Manufacturers.

The Cement of the Ancients.

UNEXCELLED FOR STRENGTH AND DURABILITY!

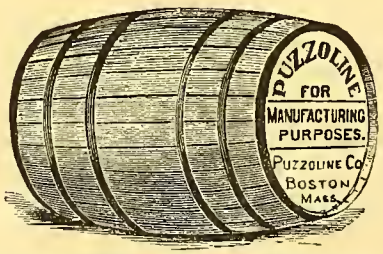
☞ CAUTION.—Manufacturers or others using adhesives of any kind are invited to examine into the merits of the above before purchasing, as none are genuine without the Trade-Mark, a castle, blown into the bottle.



☞ CAUTION.—Manufacturers or others using adhesives of any kind are invited to examine into the merits of the above before purchasing, as none are genuine without the Trade-Mark, a castle, blown into the bottle.

This new adhesive is a **liquid glue and cement combined,** and possesses greater strength and tenacity than any other known cement. It is composed of no injurious ingredients, **is entirely odorless,** and **is always ready** for use; no heat being required as with other adhesive compounds.

As a **Cement** in repairing **Crockery, Glassware** and **broken Ornaments** of all kinds, it is **unequaled.** It will stand the test of boiling water as no other adhesive will. As a **Glue** it is not affected by heat or moisture, and will hold more firmly than any other known preparation.



CIMITOLINE.

A MUCILAGE.

Its action is quicker, it is not affected by moisture, will not sour, mold, or dry up in any climate, and does not wrinkle the paper, as is the case with mucilage now in general use.

THE COMMERCIAL PEN FOR THE AGE.

The Only Successful Reservoir Pen in the Market.

THE ONLY PEN ever made with a CIRCLE OF IRIDIUM (DIAMOND) around the Point.

THE ONLY PEN accompanied by a WRITTEN GUARANTEE from the Manufacturers.

THE ONLY RESERVOIR PEN supplied with a GRAVITATING VALVE. Others substitute a SPRING, which soon gets out of order.

THE ONLY PEN that will stand the Test of Time.

The above are FACTS which it behooves every man in the trade to know. Enough said.

The "SOVEREIGN" MacKinnon Pen.

READY FOR USE.

CLOSED FOR THE POCKET.

The above cuts represent our "SOVEREIGN" Pen, which differs from the other styles only in the construction of the case. Its advantages are:

GREATER STRENGTH!

GREATER CONVENIENCE FOR THE POCKET!

GREATER INK CAPACITY!

Its full length, when closed, is but 4 inches, while it can be lengthened to 5½ inches for use. THE MOST POPULAR PEN MADE. We make these in plain rubber—price $4.50; and covered completely with 18k. gold—price $7. The latter makes a very handsome gift Pen.

FOLEY'S

Celebrated Gold Pens and Pencils

THE FINEST AND BEST.

CIRCULAR.—To those engaged in mercantile pursuits, any invention that will facilitate their labor is highly worthy of notice, as well as of extensive patronage. One of the most important inventions of the present age is that of a pen that possesses the necessary qualities of firmness in mark and durability in use. Pre-eminently such are those of JOHN FOLEY, Manufacturer of Fine Gold Pens and Pencils, No. 2 Astor House. Their superior value is tested by the long time he has been engaged in our city in their manufacture. We, the subscribers, who know the value of FOLEY'S PENS from constant use of them for a number of years, cheerfully recommend them to those who wish for the best and most pertect Gold Pen ever made.

Trade Gossip.

All new goods and designs which are not, strictly speaking, "Novelties" will be noticed under this head. The trade are requested to forward descriptions with samples in order to secure proper notice.

J. Samuel Bee, Jr., Charleston, S. C., has failed.

G. D. Sutton, publisher, Webster City, Iowa, has sold out.

C. C. Townsend, dealer in fancy goods, Grass Valley, Cal., has sold out.

Z. S. Bradford, dealer in fancy goods, Davenport, Iowa, has been burned out.

Joseph Levy, stationer, New Orleans, La., has had his stock damaged by water.

The Western Electrotype Foundry, St. Louis, Mo., has been incorporated. Authorized capital, $10,000.

The firm of W. C. Davidson & Co., lithographers, Montreal, Can., is now composed of W. C. Davidson and John Younger.

The stock of Crowe & Cook, engravers, San Francisco, Cal., has been attached.

Joseph I. Devlin, bookseller and stationer, Chicago, Ill., has made an assignment.

Mrs. J. N. Nitcher, bookseller and stationer, Effingham, Ill., has sold out to F. D. Truitt.

J. K. Butler & Co., stationers, Denver, Col., have dissolved partnership. Geo. S. Smith & Co. succeed.

M. W. Sherrill & Co., wholesale stationers, Louisville, Ky., have changed their style to Sherrill & Forrester.

Stork, Phipps & Co., stationers and booksellers, Baltimore, Md., have dissolved partnership. W. L. Stork & Co. continue.

B. Benjamin & Co., junk dealers, Cincinnati, O., have dissolved partnership by the retirement of Isaac Block. Style remains the same.

E. C. Palmer & Co., dealers in paper and printers' materials, New Orleans, have admitted Alexander Lesseps to partnership. Style unchanged.

Myers Brothers are very busy with De La Rue's valentines and Easter cards. It is said that these goods are so strikingly handsome that they sell on sight.

Wilbur & Hastings, stationers. New York city, have dissolved partnership. Wm. M. Hastings continues under old style, with special capital of $5,000, to December 31, 1883.

Wm. Maun, blank-book manufacturer and wholesale and retail stationer, Philadelphia, Pa., has admitted his son, Joe H. Mann, to an interest in the business, the style remaining unchanged.

Potter, Ainsworth & Co., publishers, New York city, have dissolved partnership. Stephen A. Potter and Joseph F. Ainsworth continue under the same style, with special capital of $35,000, to January 1, 1884.

J. H. Bufford's Sons have just published three new designs in cheap advertising cards, and are numbered 451, 453 and 495. Set 451 represents shadow burlesques; 453 is a tableau comic series, and 495 a presidential series. Each card of the latter shows a likeness of one of the United States presidents, with the dates of his birth, inauguration, &c. This house has also introduced a new sheet of cottage chromos in four designs, which are excellently and elaborately executed.

Cross, Gibson & Laimbeer, manufacturing stationers and printers, at Nos. 13 and 15 Lispenard street, have become financially embarrassed, and the sheriff has seized their presses and stock by virtue of ten judgments obtained by various creditors. The firm submitted their affairs to the creditors in September, and as the latter found they had twice as much assets as liabilities, an extension was granted; this extension failed because of a quarrel between the partners, the notes were not paid, and the creditors put their claims in the shape of judgments, among them being W. R. Sheffield, $1,214; Miller & Flinn, $616; Tower Manufacturing Company, $1,064; William Laimbeer, $2,216. J. L. Williams obtained a judgment for $5,412 against A. B. Gibson individually. They owe about $9,000 in all, and the assets are valued at $26,000. The sheriff has removed all the property to No. 31 Greene street, where it will be sold at auction on Saturday. The firm was originally Pulver & Cross, afterwards Cross & Gibson, and Mr. Laimbeer was admitted a year ago. Mr. Cross intends to resume as soon as difficulties are settled.

McFeeters & Hall, commission stationers at No. 25 Murray street, made an assignment on Friday last to Joseph F. Barton, with preferences of $5,448.80. They were agents for the Powers Paper Company, of Springfield, Mass., which is given a preference for $4,906.50. McFeeters & Co. failed several years ago, and were succeeded by Olney, McFeeters & Co., who were succeeded a year ago by the present firm.

The Transatlantic Publishing Company (limited), which publishes the *Illustrirte Nachrichten aus Deutschland, Oestereich und der Schweitz* at No. 75 Chatham street, has been seized by the sheriff, S. Trier, one of the creditors, having obtained a judgment for $967 against the company. The property has been ordered to be sold out by the sheriff.

A. Weidman & Co. exhibit one of the largest lines of masks ever offered in this city. The assortment comprises most of the style at present manufactured either in this country or in Europe, including several designed by the firm. All members of the trade who intend to handle these goods should send for the catalogue.

Kissam, the ruler, has collated and printed in a convenient form for use, a list of the sizes and weights of papers and boards most generally needed by the trade. It is a comprehensive list, and he purposes distributing it among his customers, and their name is legion.

The Powers Paper Company, Springfield, Mass., has recovered of J. Sterling Robinson, through its counsel, W. H. Morrison, New York, $4,100, the full amount of its claim against him.

Duval F. Polk, formerly with Claxton, Remsen & Haffelfinger, has connected himself with the house of Houghton, Mifflin & Co., Boston, and will represent the latter house on the road.

John Gibson's travelers will soon be on the road for the spring season with a new and elegant line of Easter and birthday cards, in addition to his regular line of goods.

Cooke & Cobb have their new catalogue ready, embracing their former line of goods, together with numerous new specialties of importance to the general stationery trade.

V. W. Van Horn has been admitted to partnership with J. H. Van Kirk, paper dealer, this city, and the business will be continued under the firm name of J. H. Van Kirk & Co.

J. H. Staats, newsdealer, &c., Lockport, N. Y., has been burned out.

I. Chase, publisher, Evart, Mich., has sold out.

F. C Edwards, bookbinder, Brattleboro, Vt., is dead.

Gilman Colby, printer, Chicopee, Mass., has sold out to S. G. Otis.

Elizabeth Connolly, dealer in fancy goods, this city, has made an assignment.

L. W. Redington, publisher of the *Review and Inquirer*, Rutland, Vt., has sold out.

The Union Printing and Publishing Company, Lockport, N. Y., has been burned out.

Winger & Pennypacker, booksellers and stationers, Van Wert, Ohio, have sold out.

A. E. Harris, publisher of the *Democrat*, Faribault, Minn., has been burned out. Insured.

Sailor & Grauer, printers, St. Louis, Mo., have dissolved partnership. John J. Grauer succeeds.

Schaefer & Gambs, paper dealers, Cincinnati, Ohio, have dissolved partnership. Schaefer & Heilman succeed.

The *Rough Notes* Company, publishers, Indianapolis, Ind., has been incorporated. Authorized capital, $5,000.

Samuel Raynor & Co. have issued a new trade price list of envelopes, which quotes lower prices than their lists of last July and October.

Milo D. Hamilton & Son, publishers of the *Monroe Commercial*, Monroe, Mich., have dissolved partnership. F. D. Hamilton succeeds.

John Stellman & Sons, importers and wholesale dealers in notions, Baltimore, Md., have dissolved partnership. John H. Stellman & Co. succeed.

E. Brigham has retired from the firm of Taylor, Nichols & Co., stationery manufacturers, Springfield, Mass., and J. A. Murphy has been admitted.

Ross & Haskell, dealers in fancy goods, Montreal, Quebec, Can., have admitted A. Campbell to partnership. Their style is now Ross, Haskell & Campbell.

Train, Smith & Co., Boston, forward a very neat monthly calender for 1881. The card has a gold ground and the monthly sheets are black, with red lettering.

The Hawaiian Almanac and Annual for 1881 has been received. It is published by Thos. G. Thrum, Honolulu, and is a compendium of valuable information on matters relating to the Hawaiian Islands.

Corser's combination rule, merchandise and postal scale can be ordered through Edward Kimpton, 48 John street, the agent in this city. It is very simple in its construction, and accurate in weighing and computing the postage at the same time on any small article to go through the mail; besides it is one of the cheapest scales known.

The Davidson Rubber Company, 30 Franklin street, Boston, manufactures to order and keeps in stock fine rubber goods for stationers, &c. Delano's elastic bands and rings are made by this company, and particular attention is invited to their quality. These goods come in all sizes, and orders for them will be filled promptly and on the best terms.

M. L. Leman has lately introduced here the English law pen which he manufactures at his works at Birmingham, England. This is a stub pen, but unlike the usual pattern, it has the advantage of holding a good supply of ink, and has also the action of the old style goose quill. It can be used to write easily, holding the pen in any position, either perpendicular or at an angle of

forty-five degrees. Prices are about the same as the regular line, and in this particular are within the reach of the most economically inclined buyer.

T. N. Cockerill, dealer in notions, Dixon, Ky., has been closed out by the sheriff.

J. B. Marquet & Son, paper box makers, Newark, N. J., have dissolved partnership.

Julius A. Johnson, publisher of the *Ledger*, Easton, Md., has been sold out at auction.

Frank L. Henderson, news dealer, &c., Marshall, Mich., has sold out to F. W. Davis.

The stock of James M. Smith, dealer in fancy goods, Newark, N. J., has been damaged by fire. Insured.

J. J. Halpin, Silver Reef, Utah, was among the visiting members of the trade in the city this week.

George A. Raisbeck, representing Ph. Hake, is again on the road, having started away this week, in company with V. W. Van Horn, for the West, carrying with him a full line of novelties to display in his generally artistic manner.

The St. Louis Paper Compauy, St. Louis, Mo., has issued a new calendar for 1881. It is illuminated with rich colors. The calendar proper appears on the card between floral designs, and in the centre is a monthly calendar in twelve separate sheets, to correspond with the twelve months of the year.

Of the many guides and seed and plant catalogues sent out by seedsmen and nurserymen, and that are doing so much to inform the people and beautify and enrich our country, none are so beautiful, none so instructive as *Vick's Floral Guide*. Its paper is the choicest, its illustrations handsome and given by the hundred, while its colored plate is a gem. This work is published by James Vick, Rochester, N. Y.

Ph. Hake is very busy with his spring line of goods, which it is said will far surpass any previous effort. The stamped papeteries are wonders of the engraver's art, and are extremely cheap. The menu and dinner card line has late additions which are very beautiful. Easter offerings and cards, artistic in design and finish, will please every lover of art. The new bevel, "The Corinthian," is just out. His late styles in wedding envelopes and invitations are said to be the most salable line of goods shown this season. The paper wedding is the latest thing in that line. This is intended to be celebrated after a marriage of three years. Ph. Hake shows samples of invitations for these, one of which is both comic and odd, as it has comic characters embossed upon it, and the printing is done w. f. all through.

Winkley, Thorp & Dresser, Boston, have just put upon the market the "Traveler's Vest Pocket Expense Account Book." This, as its name indicates, is intended for traveling salesmen. It gives space for the items of expense in detail, and allows the traveler to visit from one to five towns per day, and itemize expenses at each place. It is convenient, because its compact size permits of being carried in the upper pocket of the vest, and contains information useful to every traveler—recapitulation columns, &c. It assists the memory of the traveler, who often forgets some items for which money has been expended; and is also an economizer of time, for its printed headings and rulings save much writing otherwise necessary in an ordinary book. For the employer it also furnishes a satisfactory and uniform system in the rendering of travelers' expense accounts, showing, as it does, the towns visited, and every item of expense during a trip. Each book calculated for a full month of thirty-one days. The only thing wanting in this book is a calendar.

THE WESTERN SCHOOL SUPPLY CO.,

The School Slate House of the West, with School Crayon Supplies for the World,

SANDUSKY, OHIO,

—MANUFACTURERS OF—

White and Colored School Crayons, Carpenters' Chalk, Black Boards, Black Board Pointers and Erasers,

THE STATIONER.

DEVOTED TO THE INTERESTS OF THE

Stationery and Fancy Goods Trades.

WEEKLY---$2.00 PER ANNUM.

Single Copies - - - - 10 Cents

NEW YORK, THURSDAY, JANUARY 13, 1881.

Advertisements cannot be received for insertion in the current week later than 12 M. on Wednesday. The charge for advertising is 25 cents a line, each insertion. Special terms for standing and displayed advertisements to be had on application.

This journal aims to be a medium of information for and a representative of the interests of every one connected with the stationery and fancy goods trades. It contains a full and trustworthy survey of the market for stationery in this country, in all cases giving the actual prices at which goods can be bought of importers and jobbers in this city, together with a detailed account of novelties in the trade, patents relating to stationery, and current items of interest. A review of foreign markets and accounts of movements abroad will also be furnished, and no pains will be spared to make THE STATIONER a thorough and complete exponent of the trade.

Subscription and postage for Great Britain, per annum..... 12s.

Any information our readers may wish to obtain shall be cheerfully given, and prompt replies will be made to all inquiries addressed to us on any subjects of interest to the trade.

Communications on all trade matters are earnestly solicited. Address

HOWARD LOCKWOOD, Pres. and Treas.
American Stationer Associatiou,

Subscribers to THE STATIONER can he supplied with the best cloth binder in the market. Deliverable at the publication office. Price, fifty cents.

Readers of this paper who avail themselves of the information obtained from its columns, by advertisement or otherwise, are requested to notify their correspondents of the source of their information.

THE dinner of the Stationers' Board of Trade, which is to come off to-night, promises to surpass any previous like affair in numbers present and its character.

IN his annual report to the Stationers' Board of Trade, President Willy Wallach takes occasion to impress upon the members of that association the importance of giving more attention, as a representative organization, to matters of general interest.

WE have urged this upon the Board of Trade upon more than one occasion, as our readers well know, and have always thought that its president was in accord with us, although, perhaps, hampered by the fact that many members of the Board have acted as if they were sufficient unto themselves, and that the great mass of the trade, which is altogether outside of the organization had no interests which it was bound to consider, or which it might attempt to protect.

IT is time that the perfunctory methods of the Board were changed. It cannot assume, however, to dictate to the trade all over the country, for there are other similar organizations which are located at other cities which have a just and equal right to be heard and consulted on matters of general trade significance. But our own local association can take an important part in making suggestion and shaping action which will attract the confidence of the trade and put it upon a higher and more important footing in its trade relations. The subjects mentioned in President Wallach's report are such as we have had considerable to say about. A bankrupt law is most important and ought not to pass without the concurrence of every commercial interest. Cheap and equable freight transportation is another item in the same category, and last, but by no means least, is the question whether merchants can be compelled to take out licenses and be taxed for doing business in States where no corresponding burden is laid on the citizens of such States. Inasmuch as these features are officially brought to the attention of the New York Board, we may now urgently inquire what the organization is going to do about it? If it fails we hope that the Chicago and St. Louis boards will be enterprising enough to take these issues up and make some headway on them.

THE receipt of several inquiries as to where goods can be found brings us back to the query, made by a correspondent in our issue of December 30, and that is, "Why do not the old stationers advertise more, especially their new things?" If our readers will turn to THE STATIONER of the date mentioned they will see what an important line of inquiry is developed in the communication referred to. And it is not one stationer alone that would like to be favored with the information there sought, or which is demanded of us day in and day out. While we stand ready and never fail to reply to every legitimate inquiry from the trade, we cannot but feel that such questions would be best answered through our advertising columns. Imagine the Rip Van Winkle stationer, who, while claiming to be "one of the best known in the trade, and established in the business for fifty years," is yet so unsought and so little heard of that one of the most active and enterprising stationers that we know of only discovered him by chance and "dropped" upon him in the most fortuitous kind of a way. What an accumulation of dust and cobwebs there must be pervading the atmosphere surrounding such a tradesman! But such men must be of a ruminating order of animals. They sit behind smoky windows and chew the cud of placid business contentment, taking the rain and sunshine of trade as they happen to come, cropping only such herbage as may be found within the limits of their business pasture, lazy, self-satisfied and content to jog along, giving nothing back to the world and making as little use as possible of what talent they may possess. Such men are the farrow cows of trade.

Communications.

[Correspondents are requested to write on only one side of their paper. No responsibility for the opinions of correspondents attaches to this paper.]

AFRAID OF THEM.

JANUARY 3, 1881.

To the Editor of The Stationer:

I see by the last STATIONER, that some firm in your city deducted from the errand boy, whose wages were $2 per week, 33 cents for Christmas day. This is pretty small. Will you please inform me what firm this was? Should I deal with them I will at once withdraw all my trade. I am afraid of such men. S. C. W.

PERFORATED BOOKS, &c.

JANUARY 8, 1881.

To the Editor of The Stationer:

Will you kindly inform us, if possible, who makes perforated money receipt books, notes, drafts, &c., and much oblige, M. N.

ANSWERS TO CORRESPONDENTS.

S. C. W.—We prefer to withhold the name of the firm.

M. N.—Bugbee & Hall, Providence, R. I., make a specialty of keeping perforated books, &c., in stock, and our New York houses only supply the goods to order. Moore & Warren, this city, do all kinds of perforating work for the trade, and can supply them.

OBITUARY.

T. NEWTON KURTZ.

T. Newton Kurtz died at his residence, No. 261 Maryland avenue, Baltimore, Md., on January 9, from the effects of a stroke of paralysis received on the 6th of May, 1879. Mr. Kurtz was born at Hagerstown, Md., on June 28, 1822, and was educated at Pennsylvania College. He was the son of the late Rev. Benjamin Kurtz, D. D., LL. D., a distinguished theologian, and editor of the *Lutheran Observer*. For many years Mr. Kurtz was his father's publisher of that paper,

and during his father's life became owner of the same. In 1845 he established a publishing, book and stationery house at 151 West Pratt street, Baltimore, which he carried on successfully to the time of his illness, when he associated with himself his youngest son as partner. During his life Mr. Kurtz published a number of miscellaneous and religious works, which latter were mostly in the interest of the Lutheran Church, of which he was a devoted member. Through his energy, capacity and rectitude Mr. Kurtz was recognized as a leading merchant in his branch of trade, and through his sympathy and charity won many friends. His family, who survive him, consists of his widow, daughter and three sons—W. N. Kurtz, who was for a long time associated with his father in business, and now with J. B. Lippincott & Co., Philadelphia; Benj. Kurtz, a member of the Baltimore bar, and F. Albert Kurtz, the surviving partner of the firm of T. Newton Kurtz & Son.

Among the visiting members of the trade to the city during the week were F. Schweitzer, of Schweitzer & Baer, Chicago; Louis Reinach, Chicago, and J. H. Crew, of Crew & Brother, Leavenworth, Kan.

THE MACKINNON PEN.—The *British and Colonial Printer and Stationer* remarks: "Our transatlantic friends have kindly forwarded for our inspection and use a specimen of their stylographic pen, or as some people prefer to call the article—fluid pencil. We have used many various specimens of the *genus* stylographic pen, but we may safely assert that for general, indeed particular advantages, we have not handled an easier and a surer pen than the one received from the Mackinnon Pen Company, 200 Broadway, New York. It is ornamental, being relieved by highly finished gold mountings; it is light and writes with ease and no scratching, and finally, we have used it for one month without a breakdown. We should not go so far as to say the Mackinnon pen is the best stylographic extant, but we would like to see a better one. If we should speak of people as we find them, so we must testify of pens, we presume. We unhesitatingly pronounce the Mackinnon pen to be a good instrument, and its career of success, perhaps, is after all the best testimony in its favor."

The bids for supplying the government printer with paper were opened on Tuesday, and, as compared with the prices bid a year ago, writings are offered about ½c. lower, super-calendered book also lower, machine-finished book about the same as last year, and the bids on plate paper are decidedly lower. Woolworth & Graham were the lowest bidders on all the fine white writings at an average price of 10c.; the range of bids, including a few colored papers, is 9.08c. to 11.01c. A portion of the machine-finished book paper will probably be given to the Potomac Paper Company, and the remainder to Jessup & Moore and the Sugar River Paper Company, the latter concern getting the principal part, the range of bids being 7.8@8.02c. On super-calendered book the range of prices is 8.05c. to 9.05c. Bulkley, Dunton & Co. will probably get about 100 tons at about 9c. Last year the plate paper was offered at 12.04c., and this year at 9.09, and the opinion is expressed that the parties making this bid cannot possibly supply the paper except at a loss. The bids for cover papers ranged from 9.4c. to 9.8c. The bids on bond papers were about the same, and will probably be divided between three or four bidders. Woolworth & Graham are also lowest on some considerable quantity of white and colored bristol board.

TO POWDER GLASS.

Powdered glass is frequently used instead of paper, cloth, cotton, or sand for filtering varnishes, acids, etc. It is not soluble or corrodible. Sand, if purely silicious, would be better, but such sand is difficult to get. Powdered glass when glued to paper is also used for polishing wood and other materials. It cuts rapidly and cleanly, and is better than sand for most purposes. Glass is easily pulverized after being heated red hot and plunged into cold water. It cracks in every direction, becomes hard and brittle, and breaks with keenly cutting edges. After being pounded in a mortar, it may be divided into powders of different degrees of fineness by being sifted through lawn-sieves.

An old man named Larostat died in Paris recently. He was the doyen or senior member of the corporation of chiffonniers or rag pickers. Larostat was ninety-two years of age, and he had managed to retire some years ago. He could not break the spell which bound him to the rag pickers' quarters, however, and he died in an old house in the Cité Foucault, at Clichy. Some said that he had seen better days, and had held an important position in the financial world. At any rate, he had been postilion in the old coaching days; he had driven a cab, then a hearse, and tried his hand at shaving and hair cutting, and finally had dwindled down into the humble ranks of the rag pickers. In 1846, when fortune had not quite abandoned him, he opened a wine shop called the "Petit Pot," at the barrier of Clinchy. Latterly he made some money by advancing small sums to hawkers, green grocers and his colleagues, who had to pay handsomely for the accommodations.

Secret kindness done to your fellow creatures is as beautiful as secret injuries are detestable.

BLEACHING GUTTA PERCHA.

Dissolve the gutta percha in twenty times its weight of boiling benzole, add to the solution plaster of very good quality, and agitate the mixture from time to time. By reposing for two days the plaster is deposited and carries down with it all the impurities of the gutta percha insoluble in benzole. The clear liquid decanted is introduced by small portions at a time into twice its volume of alcohol 90 per cent., agitating continually. During this operation the gutta percha is precipitated in the state of a pasty mass, perfectly white. The desiccation of the gutta percha, thus purified, requires several weeks' exposure to the air, but may be accelerated by trituration in a mortar, which liberates moistures which it tends to retain.

Occasions of great adversity best show how great virtue each one hath. For occasions make not a man frail, but show what he is.

All yielding is attended with a less vivid consciousness than resistance; it is the submergence of our own personality by another.

Market Review.

OFFICE OF THE AMERICAN STATIONER,
WEDNESDAY, January 12, 1881.

THE MONEY MARKET.—The monetary situation was characterized by a continued ease, and the supply of capital offering for both speculative and business purposes at easy rates was abundant, and in fact almost in excess of the demand. Borrowers on call on pledge of stock collateral readily supplied their requirements at 4@6 per cent. There were considerable transactions at the intermediate rate. In the discount market prime mercantile paper sold at 5@5½ per cent. The government bond market was quite active throughout the week, and some heavy purchases were made for the account of the banks and other financial institutions. The changes in prices were, however, very slight, 4½s and 4s showing an advance of ⅛ per cent. Railroad mortgages were in good demand throughout the entire week, and most of the leading issues recorded an advance in prices. The stock market has been more active, with a pretty general advance in prices. The foreign exchange market is quiet and unchanged, if we except a slight advance in German reichmarks. The posted rates for 60-day bills were marked up to 98¾, and 98⅞ for demand. Cable transfers are 99 5-16@99 7-16. Prime commercial bills are 4.78½@4.79 (old method).

THE PAPER MARKET.—Business men generally, having completed the process of balancing up the accounts of the past year, have been more in the market this week than for several weeks past, and the year opens with a very encouraging feeling among the dealers for an active spring trade. Values hold their own very steadily, and there is a feeling in the trade that whatever early changes may occur in prices will be for the better. This view is sustained by the light stock in dealers' hands and the somewhat limited production at the mills on account of the severity of the weather in freezing up many of the smaller streams. Generally speaking, no positive changes have occurred in any particular grade of paper since last report, but as we turn from the starting point of the year, some improvement is looked for in the course of another week.

THE STATIONERY MARKET.—There is a better demand this week for staple goods from the city trade, but business from out-of-town buyers is still slow. In the fancy-goods branch of the trade very active preparations are going forward for the spring business, which will scarcely begin with much earnestness before next month. A few of the new goods for the spring have already made their appearance. Other new designs are promised daily. Considerable progress is being made in the fan and valentine trade; very large orders are being filled for the latter, and a heavy business for the season is looked for. We know of no changes in prices.

Corser's Combined Rule and Postal Scale.

(PATENTED, JULY 13, 1880.)

S. E. BARTON & CO., Manfrs (Sole) Agents

79 Milk St Boston, Mass

This Combined Postal Scale, Desk Ruler and 16-inch Rule is the most convenient article for desk use ever invented. It supplies the need of the several articles and only occupies the space of a ruler. Does not require to be set aside when not in use and there is neither balancing material to drop out nor springs to become injured by accident and thereby make the Scale variable. Being sealed accurately and tested when manufactured, it is always true. It gives the weight in ounces and fractions the same as any scale, but its **Great Merit** lies in its computing the postage required on any class of mail matter at the same time. Its low price makes it readily salable and its many flattering indorsements guarantee its accurateness and utility.

THOS. L. JAMES, Postmaster of New York, writes: "It is ingenious, accurate; ought to have a place on **every desk.**"

☞ Retail price 75 cents. Supplied to the trade at reasonable discounts. Should be kept in the stock of every stationer and hardware dealer. Send for descriptive circular and price list. Manufactured by The St. Johnsbury Scale Co. ☞ **Dealers Supplied by**

THE PROFILOGRAPH.

A new measuring instrument is described in the French papers—the "profilograph" so called because, when in use, it traces mechanically on paper the outlines of the ground over which it travels. It is a small carriage mounted on two wheels, drawn by one man and attended by another, who marks the levels at the proper places, and underneath hangs an iron rod with a large ball at its lower end, serving as a pendulum. This pendulum maintains a constant vertical position, while the machine inclines in one direction or the other, according as it ascends or descends a slope. To the upper end of the rod is fitted a pencil, which marks on a sheet of paper the ups and downs of the country traversed, whether on an ordinary road or across trackless fields—the exact profile being thus recorded to a given scale. At the same time one of the wheels, acting the part of chain-bearer, measures and indicates the distances traveled throughout the survey—the whole being accomplished with complete accuracy.

IMITATING MARBLE.—Any person may paint a wooden mantle-piece, etc., and obtain the effect of elaborate marble painting by the following method: First, give the wood two coats of white paint, and when the second coat is nearly dry take a piece of French chalk, any color you may prefer, and with this draw lines and veins—this requires no skill, as the more rudely they are drawn, the more closely will they resemble the natural markings,—then give a coat of thin white paint. Into this the chalk will work up, and the lines will assume the softened and graduated effect seen in real marble. A glossy surface may be given by an after coat of copal varnish.

Tenderness without a capacity of relieving only makes the man who feels it more wretched than the object which sues for assistance.

TO

STATIONERS.

The Stationers' Price Book and Illustrated and Descriptive Catalogue, . . $2.00

Lockwood's Directory of the Paper Trade, . . . $2.00

EVERY STATIONER wants the above Works for the

Following Reasons:

The **Price Book and Catalogue** furnishes Stationers information which, if they have at all, is usually scattered and never right at hand when wanted. As a book of immediate reference it will be found invaluable.

The **Directory** of Paper Manufacturers and Jobbers is a guide to **First Hands** in the Paper Trade. Any one who uses it intelligently can save many times its cost at once.

The Price Book is deliverable in the cities of New York, Boston, Philadelphia, Chicago, Detroit and St. Louis, where purchasers can have it packed with any goods they may be buying.

The Directory is sent post-paid.

All Stationers who wish to keep

ABREAST WITH THE TIMES,

must own these two books.

DIFFERENCES IN PORCELAIN.

Porcelain, or china, as it is commonly called, can be distinguished from pottery or faïence by holding it against a strong light. Porcelain will then appear translucent, pottery, or earthenware, opaque. According to the relative hardness of the paste after firing, porcelain is divided into hard-paste porcelain and soft-paste porcelain. Hard-paste porcelain can only with difficulty be scratched with a file or a steel point, has a semi-vitreous fracture, and will stand without injury sudden alternations of high and low temperature. It feels cold to the touch, and is bluish milk-white. The rims or projecting rings upon which specimens of hard-paste porcelain rest are generally left without glaze, which affords a ready method to distinguish them from specimens of soft-paste porcelain.

Soft-paste porcelain is more easily attacked by a file or a steel point, less dense, of a fine, porous fracture, feels warm and soapy to the touch, and has a cream-white, enamel-like appearance. The supporting rims are generally covered with glaze. The paste after firing is nearly equally translucent and sonorous as hard porcelain.

The different degrees of hardness in hard paste and soft-paste porcelain are due to different proportions of silica and alkalies in the body. The larger the proportion of silica present, the more compact the resulting porcelain. The average amount of alkaline oxides in Oriental porcelain appears to be 6 per cent., in Dresden 6.3 per cent.; in Bristol 4 per cent., with about 60 to 65 per cent. silica and 30 per cent. alumina. The soft English porcelains often contain no less than 33 per cent. of alkaline matters, with only 40 per cent of silica and 25 of alumina. Soft porcelain is an artificial combination of an alkaline flux with bone-ash, sand, chalk or gypsum. Hard porcelain is composed of kaolin and petunse, both natural products. Kaolin alone would form an opaque body, but by the admixture of a perfectly transparent substance, petunse—called "moorstone" or "chinastone" in England—the paste is rendered capable of transmitting light.

THE PHOTOPHONE IN SCIENCE.

It was noticed some time since that Prof. Bell, immediately after the first public announcement of his discovery of the photophone, took his departure for Europe, to personally make known his interesting discovery to scientists on the other side of the Atlantic. He has already been heard from. It appears that the Professor and M. Janssen, a well known French scientist, have jointly undertaken a series of interesting researches, in order to apply the photophone to the study of solar physics.

The idea first suggested by Prof. Bell, of employing his new instrument for the transmission of sound by light, is to gain some knowledge of the sounds which accompany the tremendous movements of gaseous and other matter known to take place in the sun. Some direct explorations of the sun's image, conducted at the observatory at Meudon, France, were not very successful, but they held out enough encouragement of ultimate success to induce Profs. Janssen and Bell to persist in their efforts in this direction. M. Janssen thinks a better way would be to pass a succession of solar photographs of the same "spot" before an object-glass, casting conjugate images on the selenium. These photographs would be taken at intervals great enough to give notable variations in the constitution of the spot; and thus would be condensed into a short time, variations which in reality took place too slowly to affect the selenium as they occurred.

ON WRITING INK.

Opinion is divided as to the writing inks of the ancients. Some think that they were a mechanical mixture of pigments resembling the Indian ink of more modern times; others think that they were a veritable chemical compound, and others still that they were a mixture of these two elements in proper combination. In any case, opinion is not divided regarding the superiority of the old over that of more recent time, both as regards brilliancy and permanency. All modern inks are essentially gallo-tannates of iron, though varying somewhat both in their mode of preparation and in the proportion and variety of the different ingredients entering into their composition. There are exceptions to this statement, as, for example, the cheap and simple ink discovered by the German chemist, Runge, prepared from infusion of logwood and chromate of potash. An ink prepared from these ingredients is not affected by acids or water, is black, forms no deposit, and is not acted on, nor does it act on the pen in using. Unfortunately, after it has been prepared for a time, it gelatinizes, in which condition it is totally unfit for use, nor have means yet been devised to prevent this change or to restore it once it has taken place. Consequently, it is not known commercially, and the same may be said of every other preparation not having at least a trace of gallo-tannate of iron as a basis. Our remarks will, therefore, have reference entirely to such inks, and they may be conveniently divided into three parts, viz.: (1) the *ingredients*, with reference more directly to the relative proportions in which they should be present: (2) the *preparation*, bearing on the changes which take place in the different ingredients; and (3) the *preservation*, of the ink, bearing more immediately on the changes which take place from exposure, age, etc.

The Ingredients.—These are infusion of galls, sulphate of iron, and gum, the last entering into all inks (with the exception of the blue-black ink, afterwards to be referred to) for the purpose of holding the gallo-tannate precipitated in suspension, and also giving the ink a body and gloss on drying. If too much gum be added the ink will lie on the paper without penetrating its surface, and will in consequence be easily removed. Moreover, certain other inconveniences will arise, such as the clotting of the ink in the inkstand on the least exposure, and the coating of the pen with the gummy matter, which prevents the ink flowing. The gum then should, in every case, be kept under rather than over, and most authorities give the proportion, as will immediately be shown, as part for part with the amount of iron taken. The apportioning of the iron and gall infusion is a more important matter, as on this depends both the intensity and durability of the ink. If the gall infusion be in excess, the ink though black at first, will quickly change to more or less of a dirty brown; while if the iron be in excess, it is equally objectionable in the other direction. Out of many recipes given in Watt's Dictionary, some of which are referred to as being too rich, and others as being too pale, three are selected as giving good commercial inks, and in these the proportions are respectively as follows.

Galls	12.5	6.6	6.2
Iron	2.4	2.2	3.1
Gum	2.4	1.9	3.1
Water	100	100	100

We have not tried any of these, but from experiments with other recipes we would imagine the first had about the proper proportion of galls, but a deficiency of iron, while the other two were both deficient in galls, and number three had an excess of iron for the proportion of galls used. This will probably be more forcibly brought out if we cite the recipes given by various other authorities. Ure, for example, gives the following proportions, with the remark that "the ink made by the recipe is much more rich and powerful than many of the inks commonly sold," and to "bring it to this standard a half more of water may be safely added:"

Galls	10	Iron	4.2
Gum	4.2	Water	100

and Gray gives the following proportions:

Galls	10	Iron	3.3
Gum	3.3	Water	100

Another authority (Lewis), who has investigated the subject thoroughly, gives the relative proportion of galls to iron as 3 to 1, and the most favorable results have been always obtained in our own experiments in the proportions of 3 to slightly in excess of 1. Brande, on the other hand, gives the proportions 5.0 of galls, 3.3 of iron, 3.3 of gum, to 100 water, but allowance must probably be here made for the mode in which the ink is directed to be made. The galls are directed to be boiled in the water, the iron and the gum added, and the whole kept for two months, with occasional agitation before straining for use. To understand properly the effect of these directions on the ultimate product, it is necessary to dwell for a little on the second part of the preparation.

Galls contain both tannic and gallic acids in variable proportions, stated by different authors to be from 26 per cent. of the former with a trace of the latter up to 40 per cent. of the one, and 3.5 per cent. of the other. The noticeable features here are, first, the somewhat extreme variations in which the tannin is present, and which suggest the use of the best galls, so as to get as uniform a proportion in the ink as possible; and, second, the extremely small percentage of gallic acid, and which suggests various particulars in the preparation of the infusion, so as to increase the amount and bring it into proper ratio with the tannin. Both tannic and gallic acids yield precipitates with ferrous and ferric salts, the former white and the latter black; but as the gallic precipitate is much more intense with the ferric salt than the tannic, means are taken to convert some of the tamic into gallic acid in the preparation of the infusion. To accomplish this the infusion may be boiled for a considerable time, or it may be exposed for some weeks either in preparation or after it has been prepared to the action of the atmosphere.

It is here we venture to suggest that much of the want of uniformity so often complained of in inks is produced, and consequently a little attention to details will be both expedient and profitable. Even a little variation in the process, such as a more or less lengthened exposure to atmospheric influence, or an increase or diminution of the temperature at which the exposure takes place, will affect the composition of the infusion, and disturb the relation which the ingredients bear to each other. In practice we have found that a fortnight in summer, when the temperature ranges between 70° and 80°, is sufficiently long for the infusion to stand, but in the winter, when the temperature is considerably reduced, from three weeks to a month is necessary. This, we should state, however, is for the blue-black ink, which we purpose recommending, and in the preparation of which even more care is necessary than in the case of the ordinary inks. To make the blue-black ink, let 10 parts galls be taken and infused, as directed above, in 80 parts water. Strain, and add 3½ parts pure crystallized sulphate of iron, previously dissolved in 20 parts more of water. Lastly add 4 parts sulphate of indigo, mix thoroughly, and bottle for use. This naturally brings us to the third part, viz., the preservation of the ink. And while our remarks here will refer more immediately to the preservation of the ink of the foregoing formula, many of them also will apply to all inks of the gall-tannate series. All inks of this series darken on exposure to the atmosphere, owing to the oxidation of the iron. In the case of the ordinary inks, it is preferred that the peroxidation of the iron should be partially accomplished before using to give color and, to a certain extent also, body to the ink. If the oxidation be carried too far, however, the precipitate will acquire greater density than in the case of the ferrous salt, and even in the presence of the gum will quickly deposit and leave the ink both watery in color and weak in strength. If, on the other hand, more gum be added to keep the precipitate in suspension, or if the bottle be shaken to diffuse the precipitate through the liquid, the ink, in either case on using will simply lie on the surface of the paper, and may be erased without difficulty. To prevent the iron in the blue-black ink from oxidizing, the addition of an acid is generally recommended, as this retards the conversion of the ferrous into ferric salt, and consequently keeps the ink in a thinner and paler state. Where the ink requires to be kept for a time, one-eighth part sulphuric acid, or better still, one part oxalic, may be advantageously added; but, as all acids act injuriously on the pen, and, moreover, as an ink containing a free acid acts also on the salts contained, more or less, in all papers, their use, where they can possibly be avoided, is to be deprecated. The sulphate of indigo of commerce has, besides, invariably an acid reaction sufficient, if not to prevent oxidation, at least sufficient to make the ink bite the paper, and more than this is injurious. Nothing will prevent oxidation like care in making, and afterwards bottling securely. And herein consists the advantage of every chemist making and retailing his own ink. He can make it in quantities to suit his convenience and consumption, and he, therefore, can regulate the age, which, in other words, means the oxidation of the ink. Moreover, all the processes and all the appliances he is perfectly familiar with and has at his command, while the actual cost of the material itself is so infinitesimal that he may successfully compete—at least in the limited sphere of his own circle—with the larger manufacturer, who, supplying wholesale and keeping up a somewhat expensive plant, is not so far removed as would at first appear from the level of his competition.—*Chemist and Druggist.*

DRILLING GLASS.

The following directions were contributed to *Design and Work* by an optician: First make a saturated solution of camphor in spirits of turpentine; then make a spear-shaped drill the size of hole required; heat the drill to a white heat and plunge into mercury, and it will then be very hard; sharpen on an oil-stone, knock drill in a brad-awl handle, dip the end of drill into the above solution, and work it as if you were working it through wood. It is no use fixing the drill in a drillstock, because the motion all one way won't do. Keep the drill well moistened with the solution, and sharpen it when blunt. A file dipped into solution will file the hole larger, and will not get blunt.

The "Water Mill" is the title of a ballad which has been set to music by Charles S. Plummer. The versatile composer has thus turned his talents in a new direction, but it may be questioned if his friends ever expected his latest effort—a *water* mill.

DELANO'S

RAILROAD Red Rubber Bands and Rings. COMMERCIAL

THESE goods are put up in bulk, each box containing a pound, thereby saving the expense of putting them up in gross and great gross packages, and are designed for use by parties consuming large quantities. These goods are very popular with **STATIONERS DEALING with LARGE CORPORATIONS, &c.**

THE SIZES ARE AS FOLLOWS:

Elastic Bands. Nos. 27, 28, 29, 30, 31, 32, 33, 0¼, 0½, 0¾, 00¼, 00½, 00¾, 000¼, 000½, 000¾, 0000¼, 0000½, 0000¾.

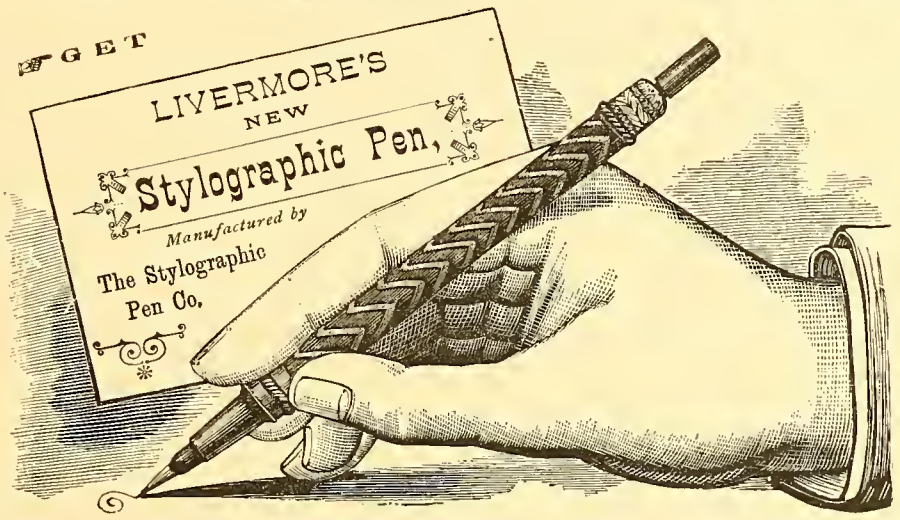
Nos. 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20 and 50. **Elastic Rings.**

P. O. Box 1337. Z. DELANO, Boston, Mass.

IF YOU WANT THE BEST STYLOGRAPHIC PEN,

The Latest and the Best.

Circulars on application.



Examination Solicited and Satisfaction Guaranteed.

The attention of the Trade is called to the improvements made and advantages offered in Livermore's New Stylographic Pen.

Patented July 15, 1879, and March 9, 1880.

FIRST—**A Smaller Air Tube**, allowing more space for the ink, and rendering the operation of filling easier and less frequent.

SECOND—**The Manner of Fastening the Needle**, not to the air tube, where it would be in da ger of being bent or injured every time the pen was filled, but in the point, where it is not so exposed.

THIRD—**The Protection of the Spring** by a silver casing, preventing the ink from clogging its action.

FOURTH—**The Duplex Interchangeable Point Section**, furnishing great facility in cleaning the pen.

FIFTH—**The Ease with which Repairs can be Made.** The needle being in the point, it is not necessary to send the whole pen to the factory, but any dealer can supply a new point.

SIXTH—**Freedom from Legal Difficulties.** The New Stylographic Pen is manufactured under the patent controlling the use of an air tube in a Fountain Pen, and it is therefore free from legal complications.

COMETS.

Modern comets are very shabby affairs. Nobody except scientific persons ever pretends to see them, and the most remarkable thing which even they dare to affirm about them is, as in the case of a recent announcement by the English Astronomer Royal, that they have "1h. 20m. right ascension and 2° north declination." This may conceal very interesting reading when interpreted by the initiated few, but for the many it is not nearly so satisfactory information as that recorded of some of the old fashioned comets. The comet of 1528, for instance, was "so horrible and dreadful and engendered such terror in the minds of men that they died, some from fear alone, others from illness engendered by fear. It was of immense length and blood-red color; at its head was seen the figure of a curved arm, holding a large sword in the hand, as if preparing to strike. At the point of this sword were three stars, and on either side a number of axes, knives and swords, covered with blood, among which were many hideous human faces, with bristling beards and hair." The comet of 1456, too, was so very dreadful that, by order of the Pontiff Calixtus III., "Ave Marias" were repeated three times daily in all the churches, with the additional words, "Oh, Lord, save us from the devil, the Turk and the comet." Again, Lucan records that the "darkest nights were lit up by unknown stars, the heavens appeared on fire, flaming torches traversed in all directions the depths of space; a comet, that fearful star which overthrows the powers of the earth, showed its horrid hair." And when Constantinople was besieged by Gainas, "so great was the danger which hung over the city that it was presignified and portended by a huge, blazing comet which reached from heaven to the earth." In one respect only are modern comets at all satisfactory; they are followed, considering their insignificance, by disasters proportionately quite as dreadful as succeeded the old comets. This last comet, for instance, is unmistakably associated with the Boer rebellion, or the advance on Lima, or the new charges against Dr. Talmage, or the snowstorm, or a dozen other equally dreadful things, or all together. So that it is only left for the scientific persons who discover comets, if they really do discover them, to explain why the new and the old compare very much as do a penny dip and an electric light.

RUBBER DOOR MATS.

Door mats of vulcanized rubber are now being extensively made use of. The mixture employed for their manufacture is generally of a very low quality; old vulcanized caoutchouc, fibrous materials and mineral matters, such as whiting, being freely added—about 20 per cent. of a low quality of new rubber, such as African tongue, being often considered sufficient. The material having been calendered to the requisite thickness, a very partial and imperfect curing is generally effected at this stage, the sheets being exposed to moderate heat between metal plates, these being often corrugated. After this the patterns of the mat are cut out by means of punches and cutters, the device having been stenciled on the sheet by means of French chalk dusted through a perforated metal plate. The mats are next laid in French chalk and cured by steam. The punchings are worked over again, the slight preliminary curing or setting being insufficient to offer any notable hindrance to this course.

More helpful than all wisdom is one draught of simple human pity that will not forsake us.

NEW PROCESS OF ENGRAVING AND PRINTING.

COPPER PLATES vs. LITHOGRAPHY.

Advantages of this Process over Stone Work:

A CLEAR SHARP IMPRESSION—AS METAL IS HARDER THAN STONE.
THE PAPER RETAINS ITS GLOSS—NO DAMPING REQUIRED.
WE PERFORATE EVERY BLANK WE PRINT BY OUR ROTARY MACHINE.
OUR NEW DESIGNS ARE ALL ORIGINAL AND FINELY EXECUTED.
WE USE NOTHING BUT HEAVY TUB-SIZED FIRST-CLASS PAPER.
EACH BOOK IS STRONGLY BOUND AND EVERY HALF DOZEN PUT UP IN BOXES.
OUR PRICE IS MUCH LESS THAN LITHOGRAPHIC WORK.

NOTES, DRAFTS, RECEIPTS, ORDERS, CHECKS, &c., by the above Process, and also from STEEL PLATES.
Designed and Manufactured especially for Stationers.

NEW METHOD OF NICKEL PLATING.

The covering of steel and other wares with a coating of nickel by means of the electric current has been practiced for a considerable time, and the fine silvery lustre of this metal, which is not tarnished by atmospheric air, is a strong recommendation for its use, especially in the case of fine tools and instruments. But every one does not possess a galvanic pile or a battery, and, therefore, the following method of nickel-plating by immersion only, described in a German periodical, may have an interest for many readers. It must be premised that whatever articles are to be nickel-plated by this process must be polished and absolutely free of rust, and also of any oily or greasy matter. This being assured, a weak solution of the chloride of zinc is prepared, containing about 5 or 10 per cent. of the salt—say 1 or 2 ounces of the chloride to 98 or 99 ounces of water. To this is added enough sulphate of nickel to turn the solution of a deep green color; the solution is then heated in a Wedgewood or other porcelain vessel to the boiling point. The objects to be covered with nickel are then suspended in the solution, so as not to touch each other, and the boiling continued for half an hour or an hour, adding from time to time a little boiling water to make up for that lost in the form of steam. The nickel, it is said by the inventor, M. F. Stolba, is deposited on the iron or steel in the form of a brilliant white coating. The operation may be continued longer than stated above, but the coating does not become much thicker. When the surface of the article is quite covered with the nickel it is washed in water containing a little chalk, and then carefully dried. Articles thus nickel-plated will bear cleaning with whitening, but of course not too roughly, and when polished have an excellent effect. The success of this process depends upon the purity of the two chemicals. The solution once used, being allowed to cool in the open air, will throw down a precipitate of oxide of iron; the solution may then be poured off filtered and used again with a small addition of the chloride of zinc and the sulphate of nickel. In like manner a covering of metallic cobalt may be obtained by using sulphate of cobalt in place of sulphate of nickel. The color of the cobalt is very nearly that of polished steel, with a slight rose tint, but it does not rust.—*Monthly Magazine.*

HARDNESS OF WATER.

Following is a simple method for determining the temporary hardness of water:

According to A. Wartha, the most accurate method is to titrate at a boil in a silver capsule with normal hydrochloric acid, using as indicator solution of alizarin or extract of logwood. As a more convenient method when traveling, &c., the author uses a tube 30 to 50 c. m. in length, closed and rounded at one end, and with a lower mark showing 10 c. c. From this mark, upwards towards the mouth, the tube is graduated in 0.1 of a c. c. For use, the tube is filled up to the lowest mark with water in question, and a little piece of filter-paper is added which has been previously saturated with extract of logwood and dried again. This gives the water a violet color. Centinormal hydrochloric acid is then added from a dropping bottle till the color of the liquid approaches an orange. The tube is then closed with the thumb and well shaken. Carbonic acid escapes, and the liquid grows red again. Acid is again added, and the tube is again shaken till a single drop of acid changes the color of the liquid to a pure lemon yellow. The quantity of centinormal acid used is then read off on the graduated tube, and can be calculated into calcium carbonate.

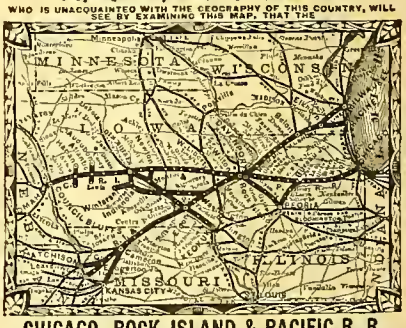
A MAN

WHO IS UNACQUAINTED WITH THE GEOGRAPHY OF THIS COUNTRY, WILL SEE BY EXAMINING THIS MAP, THAT THE



CHICAGO, ROCK ISLAND & PACIFIC R. R.

IS THE GREAT CONNECTING LINK BETWEEN THE EAST & THE WEST!

It is built like runs from Chicago to Council Bluffs, passing through Joliet, Ottawa, La Salle, Geneseo, Moline, Rock Island, Davenport, West Liberty, Iowa City, Marengo, Brooklyn, Grinnell, Des Moines (the capital of Iowa), Stuart, Adair, Adel, and Avoca; with branches from Harvey Junction to Peoria, Wilton Junction to Muscatine, Washington, Fairfield, Eldon, Bethany, Centerville, Princeton, Trenton, Gallatin, Cameron, Leavenworth, Atchison, and Kansas City; Washington to Quincy, Oskaloosa, and Knoxville; Keokuk to Farmington, Bonaparte, Bentonsport, Independence, Eldon, Ottumwa, Eddyville, Oskaloosa, Pella, Monroe, and Des Moines; Junction to Malcom, Des Moines to Indianola and Winterset; Atlantic to Lewis and Audubon; and Avoca to Harlan. This is positively the only Railroad, which owns, and operates a through line from Chicago into the State of Kansas.

Through Express Passenger Trains, with Pullman Palace Cars attached, run each way daily between CHICAGO and PEORIA, KANSAS CITY, COUNCIL BLUFFS, LEAVENWORTH and ATCHISON. Through cars are also run between Milwaukee and Kansas City, via the "Milwaukee and Rock Island Short Line."

The "Great Rock Island" is unrivalled in equipped. Its road bed is simply perfect, and its tracks laid with steel rails.

Between Chicago and Council Bluffs will be the pleasant crossing the Mississippi River on the magnificent palace of Illinois and Iowa, in one of our magnificent Dining Cars that accompany all Through Express Trains. You get as good a meal as is served in any first-class hotel, for seventy-five cents.

Appreciating the fact that a majority of the people prefer separate apartments for different purposes and the immense passenger business of this line warrants it, we are pleased to announce that this Company runs Pullman Palace Sleeping Cars for sleeping purposes, and Palace Reclining Chair Cars for day travel.

PULLMAN PALACE CARS are run through to PEORIA, DES MOINES, COUNCIL BLUFFS, KANSAS CITY, ATCHISON, and LEAVENWORTH.

Tickets via this Line, known as the "Great Rock Island Route," are sold by all Ticket Agents in the United States and Canada.

BYRON WESTON

DALTON, MASS.,

HAS BEEN AWARDED THE

GRAND PRIZE GOLD MEDAL

AND RECOMMENDED THE

Medal of Honor and Perfection

At PARIS, 1878,

This being the **HIGHEST and ONLY AWARD** given for

LINEN RECORD and LEDGER PAPER.

—A SPECIALTY.—

THIS Paper has received THE HIGHEST PREMIUM over all others from *the Cincinnati Industrial Exhibition, Massachusetts Charitable Mechanics' Association, Franklin Institute* of Philadelphia, Louisville Exposition, Medal and diploma from *United States Centennial Commission, Medal of Progress American Institute, 1877, and Medal of Improvement and Progress, Boston, 1878.* Its

PRINCIPAL ADVANTAGES

are as follows:—1. It contains more LINEN than any other Ledger Paper, has a longer fibre, and is, consequently, tougher. 2. Having a harder and better body, it frays less in erasure, so that by simply using the rubber after the eraser, the ink is prevented from spreading. 3. It is more uniform in Weight Color and Finish. 4. It never cockles if properly bound. 5. Its chemical action upon ink is such that it both writes and rules up better. For proof of the foregoing, refer to a large number of Stationers, Bookbinders, Bookkeepers, and Recorders, who have given it, after a severe test, the preference over all others. This paper is *Double Sized*, and will stand any climate or the most acid of fluid inks.

Send for sample sheet, ERASE and REWRITE FOUR TIMES on same spot. Each sheet is water-marked with name and date.

The American Stationer

A JOURNAL DEVOTED TO THE INTERESTS OF THE STATIONERY & FANCY GOODS TRADES

REDMAN & KENNY, N.Y.

"The Stationer"—Every Thursday—$2.00 Per Annum.

VOL. IX.---NO. 3. NEW YORK, JANUARY 20, 1881. WHOLE NO. 291.

RECEIVED LIBRARY JAN 21 1881 OFFICE

Correspondence.

BOSTON NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

BOSTON, Mass., January 17, 1881.

The past week has been a quiet one in the stationery trade, and what with the thaw and the rain and the slush and the biting cold weather, business has had a hard time of it. Its tone, however, judged by the undercurrent of feeling, is as cheerful as could be expected at this season of the year, when the trade purchase only in small quantities for the purpose of keeping an assortment of stock.

There has been a slight failure, that of Halladay, fancy goods and circulating library, Cornhill. Liabilities less than $3,000.

Cornhill, by the way, which a quarter of a century ago was the headquarters of the stationery trade, is rapidly being metamorphosed. Only a few booksellers and stationers now hold forth in that locality of peculiar local fame. In the Colonial times, "Cornhill street" was the home of the early Boston "printers, publishers, and stationers." The establishments still remaining are for the most part dealers in second hand and ancient books with fair assortments of stationers' goods. This locality is sandwiched between two thoroughfares whose business is wholly contrastive with that of books and stationery; and in the course of the mutations and revolutions of general business, the stationers have been driven out and into more desirable quarters, further up town.

A flying visit among the principal dealers has failed to gather any special features in the trade, but the general talk has been to the effect that trade is in a satisfactory position. Well, that is a good indication, at least. No advance in prices in materials entering into stationers' goods is expected, but it is believed that prices will remain steady and unchanged for some time to come.

Several of our dealers intend to enlarge or otherwise improve their premises, with a view to accommodating more fully the growing demands of their business. I hear of no new firms, nor changes in existing ones.

Among the manufacturers of art novelties L. Prang & Co. will give to the public some new lines of Easter cards. Bufford's Sons have got well settled in their new quarters on Federal street, and are now in telephonic connection with their new and spacious factory on Harrison Square. The rush in the illuminated advertising card business is about over. The demand from the West for this sort of business literature has been truly immense this season.

The mania that has prevailed among school children for collecting assortments of cards printed in colors, many of them being in unusually artistic style, has been suddenly checked by the retail trade by the announcement, "No cards." One schoolboy has, I hear, succeeded in collecting almost a thousand different specimens of the "art preservative," and no doubt he has been well paid for his trouble.

Apropos, an advertisement in the *Journal* a few days since offered a reward of $5 for a copy of a certain card that was printed for use in connection with an exhibit at the fair of the Massachusetts Charitable Mechanics' Association two years ago. A Cambridge boy promptly responded with the desired card and got his money.

Winkley, Thorp & Dresser, Devonshire street, had an unexpected call from the fire department on Saturday, but their loss was slight.

MICHIGAN NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

DETROIT, Mich., January 17, 1881.

I find upon referring to my diary (a new one) that your correspondent at Philadelphia has given such a full account of Thomas S. Dando & Co., Marcus Ward & Co., and L. Prang & Co.'s valentines for 1881, that I shall only ask your readers to reperuse the remarks in THE AMERICAN STATIONER of the issue January 13. While some houses buy largely of De La Rue & Co.'s cards and valentines, others give the preference to Prang's this season. Possibly some stationer will be surprised to find out how many good valentines he has forgotten when he reads over the full description as stated in No. 290 of this trade journal.

Several firms have already taken stock, and are well satisfied with the balance sheet. A trial balance book—that is, a "labor-saving book"—made of Byron Weston's paper, ruled alternately with red and blue lines, 54 to the page, and containing from 800 to 5,000 names, with sundry tables, rules of bookkeeping, perpetual calendar, wages table, &c., is this year having more demand than in preceding years, as bookkeepers and the stationery trade learn the benefit of it, and time is saved in writing the names. The "short leaf" is appreciated by accountants, and it is only necessary to write the title of an account once during the year. The book is 10½x15 inches in size, handsomely bound, stiff covers, and cloth sizes. For 1,000 accounts 20 folios would be required—that is, No. 2 book, price $3; No. 3, 1,500 names, $4; No. 4, 2,000 names, $5; No. 5, 3,000 names, $6; No. 6, 4,000 names, extra binding, $8; No. 7, 5,000 names, $10. They are published at Detroit by F. H. Drake & Co., and will be forwarded to any part of the world on receipt of the price.

The water in the Huron River is very low for the winter season. Ice is so thick that the mills are troubled to run on full time. This is the first time in many years that ice has affected the running of the mills at Ypsilanti.

The *Presque Isle* (Rogers City) *Advance* printing office was totally destroyed by fire January 14. Loss $1,500; insured for $750.

Several papers in Michigan have increased their size from folios to quartos in order to give their old subscribers a chance to turn over a new leaf for 1881.

Mr. Frizelle, formerly the traveler for a well known New York house, who has been in the retail drug business in Detroit some time, failed on the 11th instant, and made an assignment to Ralph I. Polk, of Michigan directory fame.

Several representatives of Eastern firms have visited our city this week, but request that their names should not be made known—modest possibly. Some commercial travelers have a harder run of luck to make expenses and get home, while others make expenses (plenty), and make good sales, too.

R. A. Beal has brought suit in the Washtenaw Circuit Court against the Ann Arbor Printing and Publishing Company for alleged violation of contract in publishing the Dr. Chase "Receipt Book." He claims damages to the amount of $25,000. A hearing is to be had on January 19.

I see by an article in THE AMERICAN STATIONER, last issue, that several inquiries have been sent you as to where goods can be found. In this connection allow me to state that a traveler very recently told your correspondent that he had been ordered to call with his new "Valentines" upon a customer who had seen his firm's displayed advertisement in THE STATIONER. The traveler had never called on this customer before. One might as well try to strike a light on a block of ice, as to do business without advertising it.

L. S. Butterfield, has gone to Georgia, his son Charles being very ill there. Mr. Gilbert, the bookkeeper, will have charge during his absence.

It has leaked out that one of our young salesmen who has been with a leading wholesale and retail house some years, will shortly fill a similar position in one of the wholesale houses in New York.

Although we are having unusual storms, severe cold weather, and not until to-day any good sleighing, THE AMERICAN STATIONER came through on time on Saturday, and was read by its numerous subscribers—the only trade paper.

I am glad to inclose you the name of a new subscriber for this year, 1881. This will comprise all the trade, with only "one" exception.

Among the visitors this week are Mr. Liebenroth, of New York; A. E. Marsh, with Koch, Sons & Co., New York; H. C. Hurlbut, of the Hurlbut Paper Company, South Lee, Mass., and C. E. Clark, with Springfied City Paper Company, Springfield, Mass.

Frederick Keppel, of New York, has for sale and on exhibition at T. Nourse's book store, 86 Woodward avenue, a large and choice collection of rare engravings and modern etchings by the masters of the last three centuries.

The leading book stores show a disposition to bestow Carter's, Marcus Ward and Church almanacs on their patrons in our city. The Michigan Central and Rock Island takes the lead.

CITY OF THE STRAITS.

CINCINNATI NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

CINCINNATI, January 17, 1881.

Suppose a power with the ability to compel obedience were to send forth a decree that all the world must abstain from the use of paper for one week; imagine the decree published, and try to imagine that to each and every case of disobedience punishment would be meted with the steel-like coldness of justice and the serene ferocity of fate. Try for a moment to realize the situation, and then answer whether you can conceive a more tantalizing refinement of tyranny. To be sure, this is asking a great deal of the reader; but if it serves the purpose of giving him a glint of the immense part paper performs in the service of humanity, then it is not asking too much. We have had in our great cities a limited experience which in a measure assisted us to realize something of the value of the horse in our nineteenth century civilization. Looking at the "epizooty" as helping us to appreciate the services of that noble animal by making us feel the want of him, we are constrained for the moment to respect that scourge through a sort of gratitude for the knowledge it imparted to us and impressed upon us.

But we shall never realize in the case of paper the supposition I have just suggested; nor is it likely that we shall receive such practical assistance in estimating the hourly service it has done us every day of our lives, as we have received in the case of the horse. Its services are so unobtrusive, and at the same time so subtle, as to escape notice on the one hand and defy research on the other. If the ancient god-creating Greek was dropped down amongst us to do his work anew he would choose "Genuine Linen Writings Royal" as fittest for his Mercury's wings, and set Pegasus afloat on pinions of "pressed board," plumed with "tissues" as delicate in tint as that of the ether through which he soars.

I was reminded to-day of how it may serve as a barometer to the political economist and the man of business by the remark of Mr. Webb, of the firm of Mallory & Webb, that general business since the holidays was phenomenally brisk, and that he knew it to be so from the amount of mercantile stationery he had sold to banks and merchants for their own consumption. By these sales he gauged the condition of every branch of mercantile trade, or at least the anticipations indulged by merchants and bankers. He spoke of the circumstances as something almost extraordinary.

Carpenter says that for two weeks the trade has been far ahead of what was to be expected in the line of outfits in blank books "for new firms opening new books."

Ponndsford & Co. are pressed with business beyond their anticipation in their line.

The Cincinnati branch house of the Dennison Tag Company says that the sale of fine and delicately colored tissue papers, which has been so large in the cities, is now pushing its way into the country. Jewelry cases are in growing request.

Retail dealers in some branches of stationery complain of dullness since the holidays, but the city trade was pretty well satisfied during the holidays, and a lull naturally follows at this time. So it is in the book trade, which has dropped back to its regular, everyday jog trot. Those who complain of dullness accuse some who represent trade as buoyant with merely whistling to keep their courage up. But the general surface indications coincide with the testimony of dealers that trade is vigorous and healthy.

Among representatives of the trade who have visited the city within a fortnight are J. B. Gunn, of Eberhard Faber, New York; Mr. Phillips, of B. Illfelder & Co., New York; Mr. Browne, of Culver, Page, Hoyne & Co., Chicago; J. F. Hitchcock, of Morgan Envelope Company, Springfield, Mass.; Mr. Dewey, of White, Corbin & Co., Rockville, Conn.; Mr. Hill, of Springfield, Mass. PRINCE WILLIAM.

VALUE OF SCARCE COINS.

Of all the decimal United States coins the most valuable is the silver dollar of 1804, which is excessively rare. Specimens are worth from $500 to $1,000 each, according to the nearness with which they approach perfection. The coinage of this year was very limited, and there were no more dollars coined until 1836. "Proofs" of the last named year are worth $10, and good examples $5. There was nothing done in dollars in 1837, and the issues of 1838 and 1839 are rare enough to raise the quotations for good specimens to $40 each. From that date forward to 1873, when the trade dollar came in, there is no break in the line of dollars, but from 1840 to 1856, inclusive, they are quoted as "rare" or "scarce," those of 1851 and 1852 being worth $35 or $40 each. Previous to 1804 the value of a good specimen varies from $1.75 for 1799, to $5 for 1798, and $4 for 1801, save that the first date of all (1794), which is very rare, brings $50. Some of the early dates are made peculiarly valuable by reason of variation in the number and style of stars, &c., there being three variations of 1798 and five of 1795.

On the silver half dollars, those of 1796 and 1797 are the most valuable, choice examples of these dates being worth from $15 to $20. Good ones of other years previous to 1806 will bring from $2 to $4. One of this class of 1815 is quoted at $2.50, and then they are of little rarity until 1836, when a specimen with reeded edge and head of 1837 is valued at $3 or $4. The other issue of this year is worth $1. The next dates of note are 1850, 1851 and 1852, valued at $1.50, $2.50 and $3, respectively. More recent dates are only valuable to collectors, when in perfect condition, "proofs" of later issues only being desired, and they range in worth from $1.25 to $8.

Quarter dollars are likewise a speculative issue, and therefore favorites with dealers, particularly the dates of 1823 and 1827, which are excessively rare, and command from $45 to $75 each. The 1853 issue, without arrows, is also much sought after, fair specimens bringing from $6 to $8. The only other dates worth over $1 for "good" examples are: 1824, $1.50; 1822, $2; 1819, $1.75; 1815, $2; 1807, $2; 1806, $2; 1805, $1.50; 1804, $4, and 1796, $4.

Silver dimes are still more valuable as a class than the quarters, their smaller size and more general circulation having made good specimens rather scarce in all the earlier dates. From 1828 back to 1796 they range in worth from $1 to $7, except in five instances. The high rates are, 1824, $2.50; 1825, $5; 1811, $2.50; 1809, $3; 1807, $2; 1803, $3; 1802, $6; 1801, $5; 1800, $7; 1798, $5; 1797, $5; 1796, $3; and 1840, with a draped figure of Liberty, like 1841, is worth $1, as is a good issue of 1846.

Of all the minor coins, however, an 1802 half-dime is the chief in cost, the price ranging from $75 to $200, according to quality. A good specimen of many dates is, nevertheless, a handy thing to have, as will be noted by the following quotations: 1794, $4; 1796, $4; 1797, $2; 1800, $1.25; 1801, $6; 1803, $4; 1804, $4; 1840 (with drapery), $1; 1846, $1.75. From that date until 1873, when the coinage closed, no unusual worth attaches to this class. A first-class specimen of the last named date is worth fifty cents, however.

For the three cent silver piece there is but little speculative call, as their period only reaches from 1851 to 1873, including both these years. By far the most valuable of all of them is the 1855, a perfect specimen of which is worth $2. From 1863 to 1869 an uncirculated one is worth fifty cents. All the other dates are of small value.—*Cincinnati Enquirer.*

PHOTOGRAPHS IN NATURAL COLORS.

The announcement is again made that a process has been discovered for taking photographs possessing all the brilliancy and delicacy of the natural colors, and an exhibition of pictures thus naturally colored has just been held in London. According to the reports, the colors are produced by the action of light alone in the camera, and owe nothing whatever to the artist's brush. In the photographs exhibited, the coloring appeared to be quite true to nature, and delicate tones and shades were clear to the view. The flesh tint was exact to life, and full justice was done to gorgeous regimentals. The protruded tongue of a dog in one of the photographs possessed the exact color of nature. Some of the guests, says the *English Mechanic*, inspecting this collection, and not fully acquainted with the character of the latest invention, took it for granted that the work was done by skillful, artistic hands on ivory or other material, and could scarcely believe their eyes when informed that the color, as much as the form and outline, was produced by the light of day. Careful and minute investigation, however, would then show that human handicraft was not in it; for there were touches and effects which nature's pencil of light could alone accomplish. The contention is that photographs colored by artists, however clear, must be more or less "monotonous, hard, untrue to nature and to the originals."

The process was discovered, it is said, by a French scientist, but has since undergone improvement by the proprietor of the patent for England. If the new system prove an unqualified success, the reward will not have been reaped without much labor in the past; for numerous attempts have been made to induce the sun pencil to fix colors in the pictures it draws in the camera; but chemical and mechanical difficulties have stood in the way. In the new process colors are said not only to be faithfully produced, but protected from the action of light by being passed through a boiling solution, of which gelatine forms the principal ingredient, and that some of the photographs so treated have been exposed for months to the sun without being in anywise affected by the ordeal. Unfortunately, the process is as yet unknown, as it is likely to be for some time to come.

OLD BERKSHIRE MILLS

DALTON, MASS., U. S. A.

One party writes: 'The two hundred RECORD BOOKS, for 83 of the 99 Counties, now on exhibition at the Iowa State Fair, at Des Moines; and all, but four (4) of them, made from your 'OLD BERKSHIRE MILLS LINEN LEDGER,' Medium, 40lb., make a splendid show."

[The above cut is a fac-simile of the wrapper used on the Linen Ledger Paper.]

We will pay for any book rejected on account of fault in the paper. Send for Samples, test them in comparison, and see that your books are made from paper thus water-marked.

OLD BERKSHIRE MILLS

LINEN LEDGER PAPER

Will stand the severest test of COLOR, CLIMATE, INK OR WEAR.

Being **Triple Sized** (a process entirely our own) and **Loft Dried**, can be erased and written upon the fifth time distinctly. None genuine without the water-mark and date, thus—**Old Berkshire Mills Linen Ledger, 1880.**

CARSON & BROWN CO., Manufacturers.

CANAJOHARIE, N. Y.

JUVET & CO.,

CANAJOHARIE, N. Y.

—MANUFACTURERS OF—

Time Globes, Relative Time Globes, Tellurians, Celestial,

AND VARIOUS FORMS OF TERRESTRIAL GLOBES.

The **Time Globe**—see illustration—is not only a perfect geographical globe, but is also a time piece, each part working independent of the other and perfect in both. By means of internal mechanism the Globe is made to revolve once in twenty-four hours—as does the earth. **Universal Time** is obtained **without computation.** It is a **Stem Winder, regulates** from the outside, and runs four days without rewinding. Sizes, 6, 12, 18 and 30 inches. Prices $75 to $600, according to size and style of mounting.

The **Relative Time Globe,** while capable of performing **all** the problems of the ordinary **Globe,** gives in addition **Universal Time without computation.** Sizes, 6, 12, 18 and 30 inches, Prices, $35 to $300, according to size and style of mounting.

Tellurians, Celestial and **Terrestrial Globes,** so mounted (new designs) that no part of the map is hidden from view. Sizes, 6, 12, 18 and 30 inches. Prices, $3 to $250.

Above described Globes are **all** made of a new material, which, unlike the old plaster and clay Globes, will not fracture; in fact the shell is so strong and well made that it will be economy to recover in case of geographical changes or injury to the map.

All full Meridian Ring Globes are mounted with swiveled clutch, which allows them to be placed at any desired angle. None but the latest and most perfect maps used.

Meridian Rings are of **Brass,** and **carefully** graduated.

ALL ORDERS WILL RECEIVE PROMPT AND CAREFUL ATTENTION.

L. PRANG & CO.'S

Valentines for 1881.

We take pleasure in herewith presenting to the trade our Price List of Valentines for this Season:

ASSORTMENT.—Our Valentines are made up in sets of one dozen, except Series 1, where six constitute a set, and are put up in a box or envelope. Each set contains all the designs of the series; and as no series has more than six designs, each design is more or less repeated in the set.

ENVELOPES.—Fine Cream-Tinted Envelopes are furnished with every series, except Nos. 9, 11, 15, 16, 17, without extra charge.

VALENTINES WITH SILK FRINGES.—We would call especial attention to these, as they will doubtless prove very attractive. These goods are made up with the best quality heavy silk fringe, made expressly for us. All fringed Valentines are furnished with protectors and envelopes, and are put up with assorted colors of fringes.

LIST OF PRANG'S VALENTINES FOR 1881.

M. M. Marple & Co., wholesale dealers in notions, Philadelphia, Pa., have sold out to Charles Goodman & Co.

Hatch & Littlefield, paper box manufacturers, Lowell, Mass., have dissolved partnership. Littlefield & Pease continue.

McCarty & Hasberg are now making a great display of fans, and are paying unusual attention to the trade in this line.

A. Weidmann & Co. will remove on February 1 from No. 248 Grand street, to No. 306 Broadway, corner of Duane street, this city.

R. Murray McDowell, manufacturer of slate specialties, Slatington, Pa., has been awarded the contract for supplying the public schools of Philadelphia with D and wire-bound slates during the current year.

John Carter & Co., Boston, Mass., who are the agents for Byron Weston's ledger papers and also wholesale agents for Z. Crane, Jr., & Brother's fine papers, have been very successful in pushing the sale of these goods in the Eastern States.

Charles J. Cohen, Philadelphia, has been selected as one of the managers of the Charity Ball to be given at the Academy of Music on the evening of February 1. The list embraces the names of the leaders in fashion and of the most noteworthy and prominent in the community.

Henry Levy & Son are now massing their collection of novelties for 1881, and will at an early day wait upon their friends with samples for the purpose of taking import orders. They ask the trade to kindly defer placing their requisitions until they have seen the collection, which will consist of a very large variety and will be offered at very low rates.

Turner & Harrison, Philadelphia, have put upon the market a new pen, called the Fountain stub pen No. 17. This pen writes well, and as it will take up and hold enough ink at one dip to write about twice or three times the usual number of words with a penful of ink it has merit beyond its writing character.

Charles T. Bainbridge's Sons have just brought out a one quire leatherette papeterie, with a white silk ribbon tie, which can be retailed at thirty cents. A new combination sheet and envelope folder, embellished with a neat lithographed landscape design, is also shown, which they designate as the No. 9. They also show a new fancy paper, with water marked figures, made up into fancy note paper for ladies' use. This paper is also made up into correspondence cards. A neat little novelty is to be seen there in the way of a spring clasp for binding the inside of an order of dance, to prevent the cord from tearing the order in half. It is made of steel wire, nickel plated, and is sold at $2.50 per thousand, with discount to the trade. By using these clasps the punching of the card is saved, and they hold the tassels.

The director of the Biblioteca Instruccion y Caridad (Library of Instruction and Charity), Bilbao, Spain, in returning thanks for favors received from the Lockwood Press, asks for contributions from American publishers. The institution being, as its name implies, devoted to benevolent purposes, is largely indebted to the good offices of those who make donations to it.

The book and stationery business heretofore carried on under the firm name of Julius Basinski, at Bozeman and Miles City, M. T., will hereafter be conducted under the style and firm of Julius Basinski & Brothers. The members of the firm are Julius Basinski, Samuel Basinski, and Simon Basinski.

T. B. Peterson & Brother, Philadelphia, have published a new edition of the memoirs of the celebrated French detective Vidocq. This interesting narrative will never grow old and will afford a fund of interest and amusement to every one who reads it.

The St. Paul Book and Stationery Company, D. D. Merrill manager, St. Paul, Minn., asks importers and manufacturers to forward latest price lists and catalogues. T. S. White has resigned his position with this company.

The New Brunswick Paper and Leather Board Mills, at Penobsquis, near St. John, N. B., owned by James Harris and D. Breeze, has been damaged by fire to the extent of $10,000. The loss is covered by insurance.

A. G. Elliot, paper dealer, Philadelphia, has issued a neat card calendar for 1881, which has as an important adjunct a table of weights and sizes of paper.

D. S. Walton & Co. succeed B. E. Hale & Co. as manufacturers of printed wrapping paper, paper bags, &c., at 56 and 58 Park place, New York.

The American Crayon and Slate Company, 39 Dey street, reports a fair demand for its various specialties.

A. L. Cheney, publisher of the Bridgeport (Coun.) *Sunday Eagle*, has admitted J. F. Campfield to partnership.

W. L. Miller, dealer in fancy goods, &c., Dansville, N. Y., is advertised to be sold out by the sheriff.

Fred. West, bookseller and stationer, Laporte, Ind., has changed his style to F. West & Co.

P. Quaseck, dealer in fancy goods, &c., New York, has had his stock damaged by fire.

A. O. Ward, bookseller and stationer, Manistee, Mich., has made an assignment.

Merrill, Prince & Co., fancy goods dealers, &c., Portland, Me., are closing up.

A. J. Hill, dealer in notions, Decatur, Ind., has made an assignment.

J. L. Roll, bookseller, newsdealer, &c., Galion, Ohio, is dead.

A new price list for 1881 of the Waltham crayons has been issued.

Jerome Banks, publisher of the *People's Cause*, Red Bluff, Cal., has sold out.

J. R. Hathaway, publisher of the *Day Book*, Norfolk, Va.. has suspended.

Gunn, Bliss & Co., printers, Boston, Mass., have changed to Gunn, Bliss & Curtis.

A. M. Littlefield, dealer in notions, Sanford, Me., has been closed out by the sheriff.

Pettit & Russ, printers, San Francisso, Cal., are advertised to be sold out by the sheriff.

Wm. H. Halliday, bookseller and stationer, Boston, Mass., has petitioned into insolvency.

Pott, Young & Co., stationers of this city, have dissolved partnership, and the firm is now E. & I. B. Young & Co.

McLoughlin Brothers report business in valentines as immense, and say that their edition of the new comics, long jokers, are entirely exhausted.

Caskie & Emack report an improvement lately in their school slate business, and at present are busily engaged in filling orders and answering inquiries as to quotations.

George W. Buckley, publisher of the *Tribune*, and Frank A. Onderdonk, printer, Battle Creek, Mich., have consolidated. They will carry on business under the style of Buckley & Onderdonk.

The Board of Trustees of the Stationers' Board of Trade has re-elected all of the officers for the ensuing year that served last year. These include the president, vice president, secretary, treasurer and counsel.

R. Fideau, 16 Beekman street, is filling large orders for his "Unparelleled" school bags, especially from the trade in the West. He has recently reduced his prices, and will be glad to answer inquiries in regard to them.

Among the visiting members of the trade in the city during the past week were: J. S. Walton, Hartford, Conn.; D. W. Glass, Baltimore, Md.; Alfred H. Son, of Son Brothers, San Francisco, Cal.; A. C. Maxwell, of A. C. Maxwell & Co., Bloomington, Ill., and Mr. Frank, of Frank Brothers, San Francisco.

Brown & Sanson will soon be ready to bring out new and handsome lines of finely illuminated papeteries and card cabinets, also a line of wedding goods, and something quite original in the way of visiting cards. All of these goods are of entirely new and original designs and especially adapted to the spring trade.

The National Printers' Warehouse Company is still in the field with its "National" press, which is having a good demand, and is being sent to all parts of the country. This concern, besides its business in printing presses, is doing a good trade in all other kinds of printers' material. It makes a specialty of supplying second-hand presses and type, and is prepared to offer bargains at almost all times.

The New York Silicate Book Slate Company has attained perfection in the manufacture of colored crayons for blackboards. These are produced in very brilliant colors, and are said to be superior to anything heretofore on the market. They come in red, blue, yellow and green. A feature about them is they are put up in popular quantities, a dozen in each box, so that they can be retailed at 25 cents per box. Colored crayons have usually been packed in boxes containing one gross to the box, thus oftentimes

necessitating the purchase of a larger quantity than required.

Ormston & Hosey, Oil City, Pa., want late catalogues of books, stationery and notions.

Tedford & Hartnutt, printers and bookbinders, of St. Louis, failed on Saturday afternoon, with liabilities of $20,000. The assets consist of stock, machinery, &c., which, it is claimed, are worth the amount of the liabilities.

The schedules of Robert McFeeters and George E. Hall, comprising the firm of McFeeters & Hall, filed in the county clerk's office, show liabilities of $12,590.28; nominal assets, $8,403.97, and actual assets, $3,779.30. The bonds of the receiver have been fixed at $4,000.

A. H. Goetting is making active preparations for the spring trade. Several new and striking designs in fine music, rolls, folios, books, stationery, &c., have been added to the firm's lines since the holidays. Samples of all the goods the concern handles are always on exhibition at the warerooms, 122 and 124 Duane street.

Myers Brothers' cabinet papeteries are becoming famous in transatlantic countries as well as in the United States. This week an order has been received from London for these elegant goods, and a consignment was at once forwarded thereto. There is no doubt but the assortment will create a sensation when exhibited in the British metropolis.

The line of Easter novelties being issued by Ph. Hake are marvels of artistic perfection. This branch is comparatively recent with this house, but the goods are extremely beautiful, being entirely new and mostly hand work. Samples of the entire line cost about $5, and should be seen by the trade, as they are very saleable. The antique urn and sea shell are two late dinner cards, which will be out in a few days. The former is extremely neat in design and holds a button hole bouquet.

FIRST THINGS.

Paper was first made from linen rags in 1302; printing invented, 1436; almanacs were first printed by Purback in Vienna in the year 1457; the Bible was first printed at Mentz in 1462; in 1471 the first printing press was set up by Caxton; musical notes were first printed in 1502; metal type were first made in matrices in 1462 by Peter Schœfer, at Nuremberg; Albert Durer invented wood engraving in 1527. The first newspaper in the world was the *Gazzett*, and was issued at Nuremberg in 1457. Lead pencils were first made in the United States by Wm. Monroe, at Concord, N. H., in 1811; postage stamps were first used in England in 1840 and in the United States in 1847; the printing press was first introduced into the United States at Cambridge, Mass.; the first advertisement in a newspaper appeared in 1648, and the first paper devoted exclusively to advertisements and shipping in 1657; the first American newspaper published in Boston was called "Publick Occurrences, Foreign and Domestick," came out on September 25, 1690, and was soon suppressed.

PAPER FOR CHECKS.—At any convenient stage during the manufacture of the paper the following mixture is added: Potassium iodide, .75 per cent.; potassium iodate, .75 per cent.; starch, 1.10 per cent.; sulphate or carbonate of manganese, 2.0 per cent.; and carbonate or sulphate of lead, 2.0 per cent.; or manufactured paper may be dipped in or brushed with the solution. If any of the usual chemicals used for erasing writing on checks be applied to such prepared paper they will produce a distinct stain.

MARCUS WARD & CO.,

VALENTINES.

Stocks of our Celebrated **Valentines** are now in store and arriving.

Prices range from 5c., 7c., 10c., 15c., 20c., 25c., 35c., 50c., 75c., $1.00, $1.50 and $2.00 each, list.

DEVOTED TO THE INTERESTS OF THE

Stationery and Fancy Goods Trades.

WEEKLY---$2.00 PER ANNUM.

Single Copies - - - - 10 Cents

NEW YORK, THURSDAY, JANUARY 20, 1881.

Advertisements cannot be received for insertion in the current week later than 12 M. on Wednesday. The charge for advertising is 25 cents a line, each insertion. Special terms for standing and displayed advertisements to be had on application.

This journal aims to be a medium of information for and a representative of the interests of every one connected with the stationery and fancy goods trades. It contains a full and trustworthy survey of the market for stationery in this country, in all cases giving the actual prices at which goods can be bought of importers and jobbers in this city, together with a detailed account of novelties in the trade, patents relating to stationery, and current items of interest. A review of foreign markets and accounts of movements abroad will also be furnished, and no pains will be spared to make THE STATIONER a thorough and complete exponent of the trade.

Subscription and postage for Great Britain, per annum..... 12s.

Any information our readers may wish to obtain shall be cheerfully given, and prompt replies will be made to all inquiries addressed to us on any subjects of interest to the trade.

Communications on all trade matters are earnestly solicited. Address

HOWARD LOCKWOOD, Pres. and Treas.
American Stationer Association,
74 DUANE STREET, NEW YORK.

Subscribers to THE STATIONER can be supplied with the best cloth binder in the market. Deliverable at the publication office. Price, fifty cents.

Readers of this paper who avail themselves of the information obtained from its columns, by advertisement or otherwise, are requested to notify their correspondents of the source of their information.

NATURALLY, trade shows some falling off with the passage of the holiday season, but it will be found that business is unusually good notwithstanding the time of year and the fact that this is rather an off month in trade. There is excellent promise in the present situation, and we believe that 1881 may turn out better than the last or any preceding year.

WHAT trade organization has found too formidable, private enterprise has not hesitated to attempt. A representative of a New York house has been engaged in interesting merchants in different parts of the country in a plan to test the legality of the license laws as affecting commercial travelers. He purposes, we believe, to make a test case—enduring arrest and carrying the issue to the United States Supreme Court. While we hope that something of this sort will be done, we very much regret that such measures are not carried out by trade organizations, and we should have been glad to see our Board of Trade exert itself to do something which would have given it *éclat* and brought it honor, even if the final determination in the courts should be adverse to our views and its efforts.

PEOPLE must have a very comfortable assurance of "hard times come again no more," if we may judge of their opinions from the way in which they are relaxing their purse strings. Doubtless there is a dominant feeling of confidence; and with the better financial status of almost everybody who has to do with money or money's worth, the ease which pervades all classes is remarkable and strikingly in contrast with the pinching times of two or three years ago. And yet there are many—too many, indeed—sad instances of want and misery. With some, to want and be miserable is inborn. It is a faculty which the greatest accession of wealth could not overcome. The underlying want in such cases is that of individual characteristics and natural efficiency. We do not believe in luck, so called. What are called fortuitous circumstances have some first cause—not always traceable perhaps, but not less the logical beginning of events. We deplore the misery which is ever present with us, and equally regret the occasion for it. Much of it could doubtless be averted if people only had the courage to fight it; but one of the greatest dangers in its development is the encouragement given to it. We do not and would not judge harshly of the poor, but must qualify our sympathy to a certain degree. Under the influences of revived hope and better times many people have spent more money than they could well afford, and the money laid by for the rainy day is more a thing to be talked about than seen. But we did not intend to enter upon a monologue concerning poverty and its essence. We have been led thus far because we see in some of the trade movement a speculative feeling on the part of some who could ill afford to indulge in it and a relief from oppression in the want of money which has caused a rebound to perhaps an extreme of extravagance. Despite this there has been, is, and will continue to be, we think, normal conditions of trade in every way satisfactory to those who profit by commerce and industry. The reflection upon the people must be general, and we shall have, let us hope, fewer poor as the result thereof.

Communications.

[Correspondents are requested to write on only one side of their paper. No responsibility for the opinions of correspondents attaches to this paper.]

Expansive Bill Holder.

OIL CITY, Pa., January 17, 1881.

To the Editor of The Stationer:

Can you inform us through THE STATIONER who makes the Expansive bill holder?

O. & H.

List of Publications.

DEMOPOLIS, Ala., January 13, 1881.

To the Editor of The Stationer:

Will you kindly inform me through the columns of THE STATIONER where I can obtain a list of the principal papers and magazines published in the United States and cost of same? Also a list of foreign papers and periodicals. Attention to the above will be appreciated by yours, truly, W.

ANSWERS TO CORRESPONDENTS.

EXPANSIVE BILL HOLDER.—This is made by the Tower Manufacturing Company, this city.

LIST OF PUBLICATIONS.—Geo. P. Rowell & Co.'s newspaper directory will supply a list of domestic publications. Address 8 Spruce street, New York. The International News Company, 31 Beekman street, this city, can give a list of English papers; the *Courrier des Etats Unis* of French, and E. Steiger & Co. of German publications.

MOSAIC DECORATION.

The art of representing various outlines and patterns by means of small fragments of different colored minerals or artificial substances is one of very ancient date. What is now termed "mosaic work" was known and practiced in Assyria and Babylon, as also in Egypt, and attained to high perfection among the Greeks and Romans. The ancient art was much used by the early Christians, and after falling somewhat into disuse in the dark ages, was revived in Italy at the end of the sixteenth century. The decoration of the dome of St. Peter's gave a fresh impetus to Roman mosaic workers, and a school was established for instruction in the art, which still survives, and is known as the "Fabrica."

OREGON WOODS.—Oregon maple, ash, myrtle and cedar, when polished, have beautiful colors and figures, and being of a very fine grain, are especially adapted to ornamental and cabinet work. Veneers from Oregon maple were exhibited at the Exhibition of 1876. They were universally admired and were awarded a medal and diploma for, in the words of the judges, approved by the commissioners, rare beauty, extreme fineness of grain, beautiful polish, toughness of fibre and great value for ornamental and cabinet work. Again, Oregon curled maple, for beauty of specimen. Also, forest wood for interest and variety of the exhibit, some of the specimens of most gigantic size.

CHATTEL MORTGAGES.

[In the appended list R. signifies a renewal of a pre-existing mortgage; B. S., bill of sale; and Real, a mortgage on real estate.]

TRADE MARK LEGISLATION.

A meeting of the United States Trade Mark Association was held on Monday, at No. 99 Nassan street. One of the purposes for which the meeting was called was the election of officers for the ensning year, but as the membership of the association was very inadequately represented it was decided to postpone the election, and the policy that the association ought to pursue in relation to existing laws regulating the registration of trade marks was named as the order of the day. The membership represents the most influential firms interested in the protection of trade marks and in the legislation intended for that purpose; and it is the intention of the association this winter to agitate and promote such action by the Legislature as shall furnish adequate protection to property in trade marks, and prescribe sufficient penalties for plagiarisms of this class.

In explaining the legal aspects of the subject, Orestes Cleveland, the president, observed that property in trade marks is protected in all the States of the Union under the common law. In Alabama, Arkansas, Colorado, Delaware, Florida, Louisiana, Maryland, Minnesota, Mississippi, New Hampshire, Rhode Island, South Carolina, Texas, Virginia, Vermont, Wisconsin and West Virginia no special trade mark legislation exists, and yet suits may be maintained in any of them for damages and to restrain the infringer. He remarked that the decision of the Supreme Court of the United States sustaining the decision of Judge Dyer that the United States trade mark law is unconstitutional, was just beginning to be understood by those interested in the subject. It was true that nothing had been gained by national legislation under this decision, but it was also true that nothing had been lost by it, and that persons interested in the protection of such property were left exactly where they were before the law was enacted and interpreted. In the meantime, the association has caused to be prepared and published a compilation of the trade mark laws of the various States; a digest of treaties, conventions and declarations concerning trade marks negotiated with foreign nations; a transcript of the penal code of the State of New York on this subject, and a copy of the Trade Mark Registration act now before the Senate of the United States, with a view to an intelligent discussion of the subject by its members in the endeavor now going on to effect an equitable and uniform protection of such property, not only as a State and national, but as an international issue. The general drift of Mr. Cleveland's argument was that the common law protection is more adequate and complete than that of special statutes. But in order to bring the matter fully before the association, he suggested that some member should move the appointment of a committee to consider the advisability of applying to the Legislature of the State of New York for an act to incorporate the United States Trade Mark Association, with power to open an office for the registration of trade marks, such registration to be invested with some legal effect and value.

F. W. Hurtt, acting upon the suggestion, moved a resolution to the foregoing effect, and a committee of three—F. W. Hurtt, Charles Renauld and Robert Dunlap—was appointed to digest a plan of registration to be submitted to the Legislature. This completed the business, with the exception of a committee to nominate officers for the ensuing year, upon which Willy Wallach, S. E. Hiscox and Charles G. Emery were appointed.

THE SCOPE OF ART.

A great many people speak of art as though it were something quite outside their own practical lives—something to be seen in museums and picture galleries, but with which ordinary men and women can have nothing to do. They speak as if it were a special possession of the very wealthy, and as if all knowledge about it were confined to a small skilled body of artists and critics. In reality, no idea could be further from the truth. A writer observes that art exists all around us on every side, and enters into every detail of our everyday life. The first savage who ever carved a wooden club or a cocoa-nut drinking cup, who ever strung cowries into wampum or arranged feathers into a head-dress, was, in fact, an artist—a very rude and primitive artist, no doubt, but still an artist none the less. Whenever a man, in making any tool or vessel for common use, adds to it anything, in color, form or detail, not needed for practical purposes, but put in for the sake of ornament alone, there art begins. A plain earthenware bowl is an object for simple use; but if it be glazed with a white glaze, and then painted with a red or blue line, or a bunch of rude flowers, these purely decorative additions are art in the germ. Look around the room in which you live, and you will find artistic touches everywhere—in the paint on the door, in the figured paper on the wall, in the pattern of the carpet, in every chair, table, lamp, cup, or plate with which you have to deal in your daily doings. It may be good art, or it may be bad art, but it is art all the same in either case.—*Pottery Gazette.*

A Delicate Caliper.—The pachymeter, lately patented in Vienna, which determines the thickness of paper to the one-thousandth part of an inch, is outdone by the micrometer caliper, now coming into use in this country, which determines the thickness of paper or anything else to the ten-thousandth part of an inch.

Market Review.

Office of the American Stationer,
Wednesday, January 19, 1881.

THE MONEY MARKET.—The money market exhibited the greatest ease throughout the entire week, and borrowers on call experienced no difficulty whatever in supplying their requirements at very easy rates of interest. The offerings of capital to the government bond dealers, especially toward the close of the week, at the low rate of 3 per cent. were absolutely in excess of the demand, and lenders encountered some difficulty in finding profitable employment for their surplus funds. In the discount market prime mercantile paper sold at 5@5½ per cent., according to date of maturity. The government bond market was fairly active throughout the week, the principal inquiry being for the 4½s and 4s, which show an advance of ½ per cent. for the former and ¾ per cent. for the latter, while the 5s and 6s rose ⅛ per cent. Railroad mortgages were unusually active, and some of the leading speculative issues recorded a sharp advance in prices. Foreign exchange is quiet and weak. The further importation of gold from Europe seems to be restricted by the high rates demanded for Sterling in this market. The posted rates for prime bankers (new method) were 98⅞ and 99½; the actual rates were 98⅝@98¾ and 99 5-16@99⅜ respectively. Cable: 99 7-16@99½, and prime commercial 98⅜@98 7-16. By the old method the posted rates were 4.80½@4.81 and 4.84; the actual rates are 4.80@4.80¼ and 4.83¼@4.83½; cables, 4.84@4.84¼, and prime commercial 4.78½@4.79.

THE PAPER MARKET.—Trade among dealers this week is generally reported as quiet. Although there are some signs of stocking up, in view of a good active trade in the spring, little can be definitely said of this scarcely before the month of March. While the prices bid last week for supplying the government printer with paper are somewhat lower than last year, they are not as low as was generally expected, and although these are no criterion of the market value of paper there are large consumers who will be influenced more or less by them. This small difference in the prices, where 20 or 25 per cent. was confidently expected, shows the present strength of the market, and should have a favorable effect upon buyers. Manufacturers almost everywhere are yet moderately engaged on orders, and no great complaint is expressed as to a lack of them. Prices remain fairly steady, and we quote supersized and calendered book paper at 10@10½c.; extra machine finished do., 8½@9c,; ordinary news, 7@7½c., and fine do., 8c. There is no particular movement in manilla wrappings or straw boards. The manufacturers of straw wrappings, at their meeting held at Albany last week, passed resolutions of confidence in the present state of the trade, and agreed to hold firmly to their present schedule of prices, the only change made being an advance in the quotation of heavy weight from $3 to $3.10 per 100 pounds.

THE STATIONERY MARKET.—Business in staple goods continues to be confined pretty much to the city trade, the orders from out of town buyers, as a general thing, being for reassortments of old stocks, it being rather early as yet to begin to lay in goods for the spring. In the line of fancy goods, notwithstanding the large sales that have recently been made, there is complaint that payments are not as prompt as they should be, considering the general prosperity throughout the country. Some houses in certain kinds of goods are very busy for this season of the year, while others are doing comparatively very little. Among the former class are the dealers in valentines and Easter cards, who are very much rushed in filling orders. In Easter cards we note the fact of several houses entering in competition for their sale this year who never dealt in them before. A number of representatives of fancy good houses are now in Europe making selections for both the spring and fall seasons. Several removals are noted to take place in February. We know of no changes in prices.

DELANO'S

RAILROAD Red Rubber Bands and Rings. COMMERCIAL

THESE goods are put up in bulk, each box containing a pound, thereby saving the expense of putting them up in gross and great gross packages, and are designed for use by parties consuming large quantities. These goods are very popular with **STATIONERS DEALING** with **LARGE CORPORATIONS, &c.**

THE SIZES ARE AS FOLLOWS:

Elastic Bands. Nos. 27, 28, 29, 30, 31, 32, 33, 0¼, 0½, 0¾, 00¼, 00½, 00¾, 000¼, 000½, 000¾, 0000¼, 0000½, 0000¾.

Nos. 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20 and 50. **Elastic Rings.**

P. O. Box 1337. Z. DELANO, Boston, Mass.

IF YOU WANT THE BEST STYLOGRAPHIC PEN,

The Latest and the Best. Circulars on application.

Examination Solicited and Satisfaction Guaranteed.

The attention of the Trade is called to the improvements made and advantages offered in Livermore's New Stylographic Pen.

Patented July 15, 1879, and March 9, 1880.

FIRST—**A Smaller Air Tube**, allowing more space for the ink, and rendering the operation of filling easier and less frequent.

SECOND—**The Manner of Fastening the Needle**, not to the air tube, where it would be in danger of being bent or injured every time the pen was filled, but in the point, where it is not so exposed.

THIRD—**The Protection of the Spring** by a silver casing, preventing the ink from clogging its action.

FOURTH—**The Duplex Interchangeable Point Section**, furnishing great facility in cleaning the pen.

FIFTH—**The Ease with which Repairs can be Made.** The needle being in the point, it is not necessary to send the whole pen to the factory, but any dealer can supply a new point.

SIXTH—**Freedom from Legal Difficulties.** The New Stylographic Pen is manufactured under the patent controlling the use of an air tube in a Fountain Pen, and it is therefore free from legal complications.

☞ The most DURABLE, COMPLETE AND CONVENIENT File made.

When in use its parts are **immovable**, so that no alteration or "arranging" is necessary in order to file a paper. Papers may be taken from or placed in any part of the File without removing the others and without mutilation. *No springs are used in its construction.* The File is so arranged that, when full, the papers may be bound with a string and taken off in a compact package. Made in four sizes. Send for catalogue.

No. 51 Nassau Street, New York.

MICA AND ITS USES.

Of commonly occurring minerals few are more remarkable than those of the mica family. Originally the word mica was applied to a variety of minerals closely resembling each other, then supposed to be identical, but which the advance of science has shown to be distinct species, so that now the term is applied to a large class of minerals, the distinguishing characteristic of which is their readily splitting into thin laminæ. Common mica, or Muscovite, is very abundant in most of the older rocks, it being a constituent of gneiss, granite and mica-schist. It splits into thin laminæ, or leaves, very readily. This is due to cleavage, or the property possessed by most crystalline substances of breaking most readily in certain planes, which bear a relation to the axes of the crystals. For instance, take a crystal, or fragment of a crystal—of galena, or of rock salt—break it into small pieces, and these, if you will, again and again, even until a microscope is needed to see the form of the grains. Nearly all the fragments, large and small, will be found to be rectangular in shape, or with sides parallel to the faces of a cube, the crystals dividing readily into that form, and into no other. If fluorspar be treated in like manner, the surfaces of its fragments will be found to be parallel to the faces of an octahedron. A crystal of common feldspar, or orthoclase, similarly treated, will give rectangular cleavages on four sides, but the remaining sides will, in almost all specimens, be found to be wholly destitute of cleavage, and to break with difficulty and irregularity. The readiness with which the specimens will cleave will be found to differ. The galena breaks with great ease into perfectly rectangular blocks, with smooth and shining surfaces; the salt likewise, but less easily; the fluorspar breaks still less readily, and more care is required to obtain a smooth surface; the feldspar breaks with great ease in one direction, and with much less in the other at right angles. These examples will help us to understand the cleavage of mica. It generally cleaves in one direction; and in that direction its cleavage is almost perfect, and very easy indeed.

To this property, and to the fact that it is unaltered by a moderate heat, is due its large use for doors of stoves, &c., for closing the eye-holes of blast furnaces, and other similar purposes. Occasionally a second cleavage exists, and when this is the case the result is long fibres, almost hair-like in appearance. Chemically, mica is a silicate of alumina and potash, with a small amount of iron, magnesia and soda, and usually from 1 to 5 per cent. of water. Another remarkable property of mica is its great elasticity and toughness. It is equaled in these respects by very few materials, and in the combination of the two it is probably excelled by nothing, natural or artificial. Granite is composed of crystals, or crystalline masses, of mica, quartz and feldspar. Sometimes the crystals or masses are very small, as in common granite; sometimes very large, and when so, the mica becomes valuable; the granite is a "mica mine." Like most other materials, mica is found to change by long exposure to atmospheric influences, but the Muscovite seems less susceptible to such decomposition, and to be more staple than feldspar, which usually accompanies it. Ground in a mill it increases vastly in bulk, and forms a loose, light mass of scales, not unlike bran. It is largely used in this form in the so called mica powder as an absorbent of nitro-glycerine, its peculiar elasticity rendering accidental explosion by percussion almost impossible, while it does not interfere with the energy of the nitro-glycerine

when exploded by a fulminate or other similar device. To the microscopist a world of interest may be found in the micas. They frequently contain between the layers microscopic crystals of minerals, some of them, especially with polarized light, forming specimens of wonderful beauty. Most mineral sections for microscopic examination must be made by the laborious process of grinding and polishing, but in mica we may almost say the sections are made by nature, and the time required to make one section of most minerals will make at least one hundred of mica, and the thickness or thinness is a matter of perfect control.—*Crockery Journal.*

THE VATICAN LIBRARY.

The arrangements at the Vatican Library have been complained of by students for many years, and the announcement that the collection will for the future be opened more freely, and that the reader will be assisted, and not impeded, in his researches, will be received with general satisfaction. Two hundred thousand volumes are said to be housed in the rooms known as the Appartamento Borgia, and it is gratifying to learn that catalogues both of the printed books and manuscripts are in progress. A systematic investigation of the contents of these rooms may bring to light many unknown tracts on the political and religious controversies under the Tudors which have hitherto been unknown to historians and bibliographers. One manuscript of inestimable value to Englishmen, could it be discovered, has, up to the present time, in spite of dilligent searches, not been found either in this country or on the Continent. This is the translation of the Old and New Testaments into the English language, which John Trevisa is said to have executed at the command of his patron. Tradition has long handed down the belief that a copy was among the buried treasures in the Vatican which would one day be revealed. Tradition has probably erred in this as in most other matters. But if the translation should by a happy chance have been preserved to this time by means of a single copy in the possession of the Popes, it would be difficult to over estimate its value in the history of the English language. If no such manuscript should be found in the Vatican, there will no longer be any excuse for believing that such a work was ever accomplished by Trevisa.—*Pall Mall Gazette.*

PRODUCTION OF PICTURES BY THE AGENCY OF LIGHT.—According to this invention, it is stated more speedy and accurate productions of enlarged photographs, whether in pigment or otherwise, can be obtained by means of the improved apparatus which is used with compressed air and artificial light, and by preparing more sensitive absorbents of the image than hitherto used. The following is mainly the process: The electric or other light is placed in a compartment by itself, and through one or more apertures the rays of light travel and are projected into, and taken up and condensed in condensers which may be of solid glass, or made hollow and filled with water. By means of pipes cold air is constantly passed over and round in condensers for the purpose of keeping them cool. At a proper distance from the condensers are placed the pictures to be enlarged, and at a greater distance, in the same lines, lenses are placed parallel and concentric with the condensers. The rays thus pass through the picture, according to the several densities of its different parts, and are then taken up by the lenses, so that an image of the picture is projected at a proper focus. Vignettes of any shade can be obtained by intercepting the light between the lenses and sensitive surface, and causing it to pass through oval or round openings.

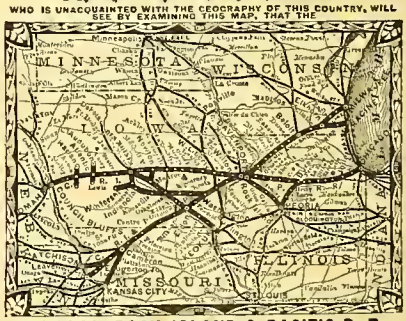
A MAN

WHO IS UNACQUAINTED WITH THE GEOGRAPHY OF THIS COUNTRY, WILL SEE BY EXAMINING THIS MAP, THAT THE



CHICAGO, ROCK ISLAND & PACIFIC R. R.

IS THE GREAT CONNECTING LINK BETWEEN THE EAST & THE WEST!

Its main line runs from Chicago to Council Bluffs, passing through Joliet, Ottawa, La Salle, Geneseo, Moline, Rock Island, Davenport, West Liberty, Iowa City, Marengo, Brooklyn, Grinnell, Des Moines (the capital of Iowa), Stuart, Atlantic, and Avoca; with branches from Seneca Junction to Peoria; Milan Junction to Muscatine, Washington, Fairfield, Eldon, Bonaparte, Farmington, Principia, Trenton, Gallatin, Cameron, Lawrenceville, Audrain, and Kansas City; Washington to Algonquin, Onahama, and Brookdale; Keokuk to Farmington, Bonaparte, Newport, Independence, Elkton, Uniontown, Edgeville, Oskaloosa, Pella, Monroe, and Des Moines; Short Line, Des Moines to Indianola and Winterset; Atlantic to Lewis and Audubon; and Avoca to Harlan. This is positively the only Railroad, which owns, and operates a through line from Chicago into the State of Kansas.

Through Express Passenger Trains, with Pullman Palace Cars, are run each way daily between CHICAGO and PEORIA, KANSAS CITY, COUNCIL BLUFFS, LEAVENWORTH and ATCHISON. Through cars are also run between Minneapolis and St. Paul via the "Milwaukee and St. Paul" Short Line.

The "Great Rock Island" is magnificently equipped, its road bed is simply perfect, and its track is laid with steel rails.

What will please you most, will be the pleasure of enjoying your meals, while passing over the beautiful prairies of Illinois and Iowa, in one of our magnificent Dining Cars that accompany all Through Express Trains. You get an entire meal as good as is served in any first-class hotel, for seventy-five cents.

Appreciating the fact that a majority of the people prefer separate apartments for different purposes (and the immense passenger business of this line warrantees it), we are pleased to announce that this Company runs Pullman Palace Sleeping Cars for sleeping purposes, and Palace Dining Cars for eating purposes, and Palace Day Cars for ease and comfort in riding.

PULLMAN PALACE CARS are run through to PEORIA, DES MOINES, COUNCIL BLUFFS, KANSAS CITY, ATCHISON, and LEAVENWORTH.

Tickets via this Line, known as the "Great Rock Island Route," are sold by all Ticket Agents in the United States and Canada.

For information not obtainable at your home ticket office, address,

A. KIMBALL, Gen'l Superintendent. E. ST. JOHN, Gen'l Ticket and Pass'r Agt., Chicago, Ill.

The MacKinnon Pen or Fluid Pencil.

FULL LENGTH, POCKET SIZE.

THE COMMERCIAL PEN FOR THE AGE.

The Only Successful Reservoir Pen in the Market.

THE ONLY PEN ever made with a CIRCLE OF IRIDIUM (DIAMOND) around the Point.

THE ONLY PEN accompanied by a WRITTEN GUARANTEE from the Manufacturers.

THE ONLY RESERVOIR PEN supplied with a GRAVITATING VALVE. Others substitute a SPRING, which soon gets out of order.

THE ONLY PEN that will stand the Test of Time.

The above are FACTS which it behooves every man in the trade to know. Enough said.

The "SOVEREIGN" MacKinnon Pen.

READY FOR USE.

CLOSED FOR THE POCKET.

The above cuts represent our "SOVEREIGN" Pen, which differs from the other styles only in the construction of the case. Its advantages are:

GREATER STRENGTH!

GREATER CONVENIENCE FOR THE POCKET!

GREATER INK CAPACITY!

Its full length, when closed, is but 4 inches, while it can be lengthened to 5½ inches for use. THE MOST POPULAR PEN MADE. We make these in plain rubber—price $4.50; and covered completely with 18k. gold—price $7. The latter makes a very handsome gift Pen.

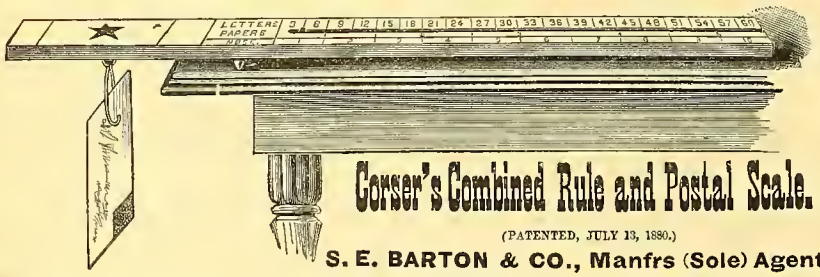
SOMETHING ENTIRELY NEW.



Corser's Combined Rule and Postal Scale.

(PATENTED, JULY 13, 1880.)

S. E. BARTON & CO., Manfrs (Sole) Agents,
79 Milk St., Boston, Mass.

This Combined Postal Scale, Desk Ruler and 16-inch Rule is the most convenient article for desk use ever invented. It supplies the need of the several articles and only occupies the space of a ruler. Does not require to be set aside when not in use and there is neither balancing material to drop out nor springs to become injured by accident and thereby make the Scale variable. Being sealed accurately and tested when manufactured, it is always true. It gives the weight in ounces and fractions the same as any scale, but its **Great Merit** lies in its computing the postage required on any class of mail matter at the same time. Its low price makes it readily salable and its many flattering indorsements guarantee its accurateness and utility.

THOS. L. JAMES, Postmaster of New York, writes: "It is ingenious, accurate; ought to have a place on **every desk.**"

☞ Retail price 75 cents. Supplied to the trade at reasonable discounts. Should be kept in the stock of every stationer and hardware dealer. Send for descriptive circular and price list. Manufactured by The St. Johnsbury Scale Co. ☞ **Dealers Supplied by**

ANNUAL DINNER OF THE STATIONERS' BOARD OF TRADE.

The annual dinner of the Stationers' Board of Trade, which occurred at Delmonico's on Thursday evening last, was the most successful event of the kind in the history of the organization. The dinner was excellent, and the floral decorations were elegant. The affair was under the management of Henry W. Curtiss, George H. Jones, and William H. Parsons as dinner committee, assisted by a reception committee, consisting of H. C. Berlin, Daniel Slote, David Scott, William R. Boorum, George W. Allen and William T. Pratt. The president, Willy Wallach, occupied the central chair at the guests' table, at which, among those invited, were Alexander H. Rice, Henry Ward Beecher, Robert Sewell, Isaac H. Bromley, John E. Parsons, Phineas Jones and Howard Lockwood.

The company was unusually large for such an occasion, and included many well known members of the trade. Among those from out of town were Wellington Smith, Charles H. Southworth, E. C. Rogers, George B. Holbrook, George West, George W. Wheelwright, W. B. Sheffield, H. McK. Twombly, S. P. Train, D. P. Crocker, J. Willard Rice, Charles S. Wheelwright, H. O. Houghton, Robert B. Claxton, E. Morgan, F. H. N. Whiting, A. M. Collins, Charles Taber.

Among the representatives of city interests were George H. Jones, George L. Pease, Alfred C. Barnes, William H. Parsons, Charles H. Hunter, Geo. Perkins, Isaac W. England, Edward Goodwin, Jr., Cornelius Perry, Joseph Reckendorfer, Alex. Agar, E. W. Fairchild, W. F. Hawkins, Geo. P. Folts, F. W. Ross, J. W. Finch, Martin Berolzheimer, John J. Parsons, Daniel Slote, J. F. Anderson, Jr., David Williams, Geo. F. Hicks, Henry Atterbury, S. W. Parker, A. Pagenstecher, A. W. Orr, Geo. Watson, Jr., B. Myers, J. F. Ackerman, R. B. Briggs, Jeremiah Sturges, Chas. B. Kendall, Chas. Cohn, Stephen Lee, David Scott, A. S. Barnes, B. Blakeman, John McLoughlin, Joseph L. Blamire, Gavin Houston, John J. Brown, E. B. Green, Chas. P. Diefendorf, E. B. Barnes, Geo. R. Cathcart, I. Yalden, T. B. Fargo, Chas. D. Pratt, Lawson Valentine, B. Van Wagenen, Robert Porter, I. C. Barnes, H. B. Barnes, A. H. Krum, Theo. E. Smith, Henry H. Bridgman, Robert L. Boyd, William T. Pratt, A. Liebeuroth, Iwan Von Auw, I. V. Koch, Fred Horn, William C. Horn, H. C. A. Gibbs, R. Esterbrook, Jr., F. H. Dunkinson, Isaac C. Kiggins, Chas. P. Tooker, Fred. A. Phillips, H. F. Lord, E. Faber, H. C. Bainbridge, B. Illfelder, J. M. Fairchild, Chas. H. Lamport, Geo. C. Boorum, W. B. Boorum, S. W. Johnson, Wm. E. Lathrop, Benj. Lawrence, H. C. Berlin, Joseph Hill, Wm. Campbell, I. H. Lange, Chas. E. Runk, H. C. Eno, R. Hoe, Wm. Kuffel, A. Dougherty, W. L. Cole, Andrew Little, J. S. Warren, Fr. Beck, T. C. Shepherd, W. H. Fuller, W. S. Gottsberger, L. H. Crowell, F. M. Harris, J. W. Lyon, P. M. Knight, Philip Hake, Fred E. Hafely, Jno. E. Atkins, W. H. Harris, Geo. W. Allen.

The toasts were as follows: 1. The Teacher: Intelligence the foundation stone of a nation's prosperity. Responded to by Rev. Henry Ward Beecher. 2. Our Country: With its institutions. Responded to by Robert Sewell. 3. New England: The home of manufactures, with Boston as the hub of the universe. Responded to by Hon. Alex. H. Rice. 4. Our Book Makers: "Books are a substantial world, both pure and good." Responded to by Alfred C. Barnes. 5. The Press and the Paper Mill: Lever and fulcrum to move the universe. Responded to by Isaac

H. Bromley. 6. New York: The commercial centre of the country. Responded to by John E. Parsons.

EUROPEAN LIBRARIES.

According to a Viennese statistical journal, Austria is better provided with public libraries than any other country in Europe. There are altogether 577 libraries in Austria, containing collectively 5,475,798 volumes, exclusive of maps and manuscripts; this is an average of 26.8 volumes per 100 inhabitants. The 500 libraries of France possess 4,598,000 volumes and 135,000 manuscripts, equal to 12.5 per 100 of the population; Italy has 493 libraries, 4,349,281 volumes and 330,570 manuscripts, equal to 16.2 per 100 persons; Prussia has 398 libraries, 2,640,450 volumes and 58,000 manuscripts, equal to 11 volumes per 100; Great Britain has 200 libraries, 2,871,493 volumes and 26,000 manuscripts; Bavaria has 169 libraries, with 1,368,500 volumes and 24,000 manuscripts, a number which places that country next to Austria as regards the number of volumes per head of population; Russia has 145 libraries, 952,000 books and 24,300 manuscripts, equal to 1.3 volumes per 100 persons. Of separate institutions, the National French Library is the largest, containing 2,078,000, or nearly half the total contents of the 500 libraries of the country; the British Museum comes next with 1,000,000 volumes, then the Royal Munich Library, 800,000; the Berlin Library, 700,000; that at Dresden, 500,000; at Vienna, 420,000. The Oxford University Library (300,000) outnumbers the National Belgian Library by 90,000 volumes; the Heidelberg University Library has also 300,000; so has the Hamburg town library and that at Stuttgart. The library of the Vatican, at Rome, is small comparatively, having only 30,000 volumes, but it is rich in manuscripts, which number 25,000.—*Engineering.*

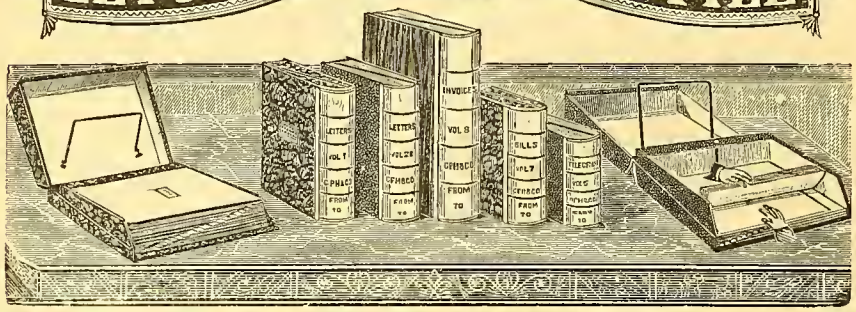
ECONOMICAL. CLEANLY AND LABOR SAVING

SELF INDEXING BROWN'S PERFECT SELF-BINDING

LETTER, BILL AND INVOICE FILE

PATENTED OCT. 30 1877



Prices: Marble Paper Sides, $15.00; Cloth, $18.00; Walnut, $24.00 per doz

The following are a few of its many advantages:

1st—It will hold nearly twice the quantity of any File of equal bulk.

2d—It costs less than any File of equal capacity.

3d—It is instantaneously *self-indexing* and *self-binding.*

4th—It does not *tear* or *mutilate* the letters.

5th—Any letter or paper can be *removed* and *replaced at pleasure* and at any time, *without* tearing or mutilating, or in any manner *disturbing* the others.

6th—Its contents are not *exposed* to *dirt* and *dust*, and are kept in a cleanly, orderly manner for rapid reference.

7th—It *files*, *indexes* and *binds* in *one operation*, and in less time than is consumed for either with any other File now in the market.

8th—It is adapted to any system of filing.

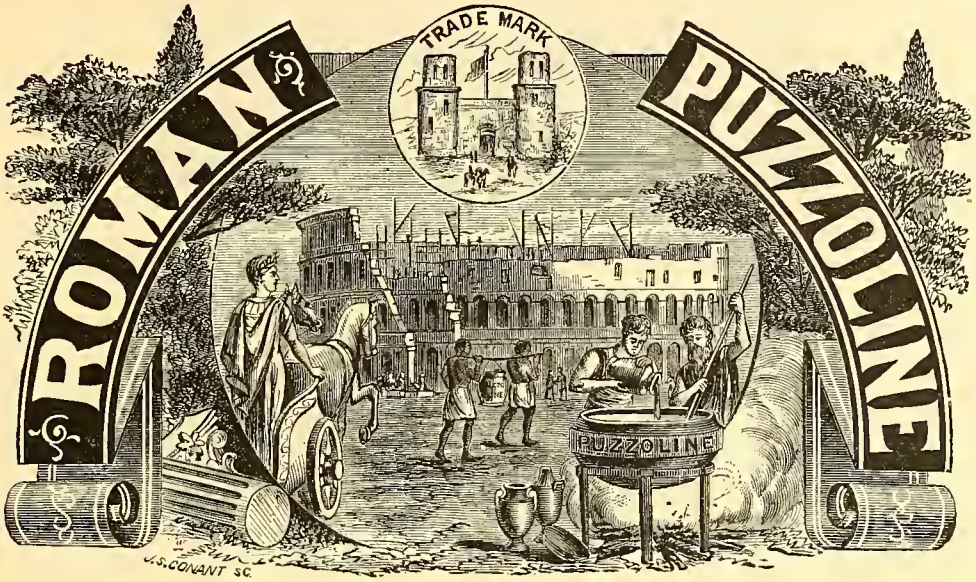
The Cement of the Ancients.

UNEXCELLED FOR STRENGTH AND DURABILITY!

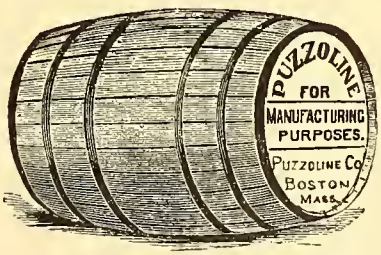
☞ CAUTION.—Manufacturers or others using adhesives of any kind are invited to examine into the merits of the above before purchasing, as none are genuine without the Trade-Mark, a castle, blown into the bottle.



☞ CAUTION.—Manufacturers or others using adhesives of any kind are invited to examine into the merits of the above before purchasing, as none are genuine without the Trade-Mark, a castle, blown into the bottle.

This new adhesive is a **liquid glue and cement combined,** and possesses greater strength and tenacity than any other known cement. It is composed of no injurious ingredients, **is entirely odorless,** and is **always ready** for use; no heat being required as with other adhesive compounds.

As a **Cement** in repairing **Crockery, Glassware** and **broken Ornaments** of all kinds, it is **unequaled.** It will stand the test of boiling water as no other adhesive will. As a **Glue** it is not affected by heat or moisture, and will hold more firmly than any other known preparation



CIMITOLINE.

A MUCILAGE.

Its action is quicker, it is not affected by moisture, will not sour, mold, or dry up in any climate, and does not wrinkle the paper, as is the case with mucilage now in general use.

MANUFACTURED SOLELY BY

THE PUZZOLINE COMPANY,

New York–4 Bond Street.
Chicago–38 Madison Street (With Economy Co).

MYERS BROTHERS, Direct Importers, 62 JOHN STREET, NEW YORK.

A full sample set of Easter Cards, being three cards of each series, and one of each design, in all sixty-nine cards for $12.50. Twelve satin samples, being three of each series, and one of each design of the four series, for $3.60. Envelope is sent with each card.

BYRON WESTON

DALTON, MASS.,

HAS BEEN AWARDED THE

GRAND PRIZE GOLD MEDAL

AND RECOMMENDED THE

Medal of Honor and Perfection

At PARIS, 1878,

This being the **HIGHEST** and **ONLY AWARD** given for

LINEN RECORD & LEDGER PAPER.

—A SPECIALTY.—

THIS Paper has received THE HIGHEST PREMIUM over all others from *the Cincinnati Industrial Exhibition, Massachusetts Charitable Mechanics' Association, Franklin Institute* of Philadelphia, Louisville Exposition, Medal and diploma from *United States Centennial Commission, Medal of Progress American Institute, 1877, and Medal of Improvement and Progress, Boston, 1878.* Its

PRINCIPAL ADVANTAGES

are as follows:—1. It contains more LINEN than any other Ledger Paper, has a longer fibre, and is, consequently, tougher. 2. Having a harder and better body, it frays less in erasure, so that by simply using the rubber after the eraser, the ink is prevented from spreading. 3. It is more uniform in Weight Color and Finish. 4. It never cockles if properly bound. 5. Its chemical action upon ink is such that it both writes and rules up better. For proof of the foregoing, refer to a large number of Stationers, Bookbinders, Bookkeepers, and Recorders, who have given it, after a severe test, the preference over all others. This paper is *Double Sized*, and will stand any climate or the most acid of fluid inks.

☞ **Send for sample sheet, ERASE and REWRITE FOUR TIMES on same spot.**

Each sheet is water-marked with name and date.

LOCKWOOD PRESS, 74 Duane Street, New York.

A JOURNAL DEVOTED TO THE INTERESTS OF THE STATIONERY & FANCY GOODS TRADES

ROMAN & KENNY, N.Y.

"The Stationer"—Every Thursday—$2.00 Per Annum.

VOL. IX.---NO. 4. NEW YORK, JANUARY 27, 1881. WHOLE NO. 292.

REC'D JAN 29 PATENT OFFICE

Correspondence.

BOSTON NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

BOSTON, Mass., January 24, 1881.

After the storm a calm. Our merchants never realized the convenience of telegraph communication until Friday last, when the severe storm prostrated the wires between Boston and New York. The mishap interfered with business seriously.

While the situation offers no special features, still there is something to be said about the stationery trade.

In wedding invitations some very artistic specimens have been issued. One is twice as long as it is wide, so that it folds once in order to enter the square envelope, which may or may not have a monogram, depending upon the taste of those immediately concerned, and is of thick, fine paper. The engraving is in the script of medium size, and the form of invitations remains unchanged, only varying to suit the circumstances. The lady's card, which announces or rather accompanies the invitations, is small but thick, and longer than ordinary visiting cards, and her full name is engraved upon it. Some gentlemen's visiting cards are smaller than those used by the ladies, and, like theirs, are engraved in English script.

Stationers have been very busy of late in getting out wedding invitations. Correspondence cards have appeared in various unique designs, some of them decidedly *blasé*. The prettiest are thick squares of bristol board, with beveled edges, with the most delicate designs in India ink in the corners, with a single ear of corn, a blade or two of grass, or a field flower. Among the novelties are cards with metalline snakes, butterflies and other insects, done in colors, and others decorated with a Sairey Gamp of umbrellas or with a flight of birds cleaving their way through the lighter cloud of color in a single corner. Another style displayed has a small palette in sepia in one corner, with vines and tendrils dropping irregularly down the side. For gentlemen there are thin rough Irish linen cards, warranted to make the worst handwriting seem tolerable or intelligible.

In some new styles of ordinary note paper only the faintest tinge of color is allowable. One specimen, very neat, is a little grayer than cream color. The envelopes are almost usually square, and the paper folds once to accommodate them. It is noticeable that both stationers and post-office clerks are tired of the square-shaped envelopes. If somebody would introduce a new envelope the innovation would perhaps be hailed with pleasure, and profit to the maker.

Ward & Gay, Devonshire street, have in store a large assortment of wedding cards and cards. Their lines of valentines, Easter cards, &c., are also very attractive.

Hon. Byron Weston, Lieutenant Governor of Massachusetts, gave a "practical talk" before the B. Y. M. C. Union on Saturday evening last, on "Paper—Its Manufacture, Ancient and Modern," with specimens and other illustrations. It is unnecessary to add that Mr. Weston's talk was of a most practical, entertaining and interesting character, and what he does not know about paper is hardly worth knowing. In fact, he spoke from the card, as he had a right to do, his own papers also speaking for themselves.

Winkley, Thorp & Dresser, Devonshire street; Doane & Greenough, Thomas Groom & Co., Aaron Gay & Co., all of State street; C. K. Darling, 15 Exchange street; J. L. Fairbanks & Co., 228 Washington street; Hooper, Lewis & Co., Page, Spaulding & Co., Dennison & Co., Milk street, and other leading dealers, besides not a few of the smaller dealers, report a fair jobbing trade during the past week.

I notice that the Manufacturers and Mechanics' Institute has completed its arrangements for its first annual exhibition, to open on September 7, 1881. Its new and mammoth exposition building now being erected on Huntington avenue will cover 351,834 square feet, which is largely in excess of that covered by the area of the Cincinnati Exposition building. The main building of the Manufacturers and Mechanics' Institute is 540 by 384 feet. Applications for space have already been applied for. This is a new enterprise, and should not be confounded with the Massachusetts Charitable Mechanics' Association, which has held fairs every four years for half a century past.

Several agents of New York houses have been in town during the week, and quite a number of calls have been made from Chicago stationers, who have been in quest of something new. L.

PHILADELPHIA NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

PHILADELPHIA, Pa., January 26, 1881.

After the splendid retail trade of the holidays a falling off in the volume of trade is natural, and therefore not surprising. The state of the market is nevertheless very good, and gives very great encouragement for the next season, manufacturers and wholesale dealers being full of confidence, and with good reason.

J. B. Lippincott & Co. are making considerable preparation to fill the orders which they are expecting. They have just got in the largest invoice of P. & J. Arnold's writing fluid and copying ink that they have ever received. They are now ready to meet all demands that can be made upon them for this standard article. They have in stock a full line of Prang & Co.'s and McLoughlin Brothers' valentines. They have also a valentine, which is a novelty for the present season, in the shape of a fan, which is sold at retail for fifty cents. I noticed among their blank book stock a complete and very large assortment of drawing books, which they have to carry in order to meet the enormous demand for this kind of books, of which they make a specialty. J. B. Lippincott & Co. are also agents for the Sayers Pennsylvania "D" school slates and the Victor slates, and can supply from stock on hand any demand made upon them.

A. M. Collins, Son & Co. are at length able to fill all of their delayed orders. The demand for their glazed cards has been greater than they anticipated. Business is naturally quiet with this house at this time of the year, but their prospects for spring are most favorable.

The firm of John Gladding & Son has changed its style, and will be hereafter John W. Gladding. Since the death of John Gladding the firm has been as now constituted and the change of style is a mere formality.

Langfeld, Turner & Andrews are very busy and are as hard at work as in December last. They have already taken quite a number of orders for the spring trade, and don't propose to lose any time in their factory for fear of getting behind.

Marcus Ward & Co. have received from England first samples of Easter cards. Some of these cards are got up in the best taste and are preferred to anything that I have ever seen.

T. W. Price & Co., independently of their blank books, which are so highly esteemed, are manufacturers of advertising cards which are in great demand. Some of these cards, although very low in price, are charming and in great request because they are just suited to the purposes for which they are designed.

Turner & Harrison's fountain pen is a very pleasing innovation, which is said to be a great success. The pen itself is excellent. It is so made that it takes up a great quantity of ink, so that you can write with it for quite a while before resorting again to the inkstand. It thus economizes time, and this feature will be appreciated by everybody who writes much.

Charles J. Cohen has finished taking account of stock, and is devoting his full energies to the development of the early trade. The new envelope machinery he has recently added is pro-

ducing most excellent work, and enables him to fill all orders promptly. Mr. Cohen makes a specialty of quoting inside close rates to buyers of quantities of his make of envelopes. The new and spacious sample room fitted up in the autumn, and until recently crowded with the display of fancy goods for the holidays, are now replete with staple stationery of every kind and grade; the samples are well exhibited.

J. VIENNOT.

BALTIMORE NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

BALTIMORE, Md., January 25, 1881.

There is but little new to record regarding the stationery and fancy goods trades since my last. The week just closed has been better for business than at any time since the beginning of the year and the prospects are encouraging for still better things. Jobbers are rapidly making preparations in anticipation of an active spring trade, and a healthy feeling prevails on all sides.

The will of T. Newton Kurtz, whose death I heretofore noticed, has been probated and letters of administration granted to the widow and Benjamin Kurtz, one of the sons, the bond being for $100,000. The estate is left to the widow and the children, all of it going to the latter at Mrs. Kurtz's death. Provision is made for one of the sons carrying on the father's book business if he chooses to do so. The executors are ordered to pay, if not paid by the testator, $500, balance of the donation of $1,000, made in 1865 to the Missionary Institute of the Lutheran Church at Selin's Grove, Pa.

E. B. Young, of Newson, Curry & Co., and J. C. Moran, of John B. Piets, started recently on a brief trip West, the latter carrying with him a full line of the publications of the house he represents.

Smith, Dixon & Co. found the paper bag trade better during the past year than for a long time past, and reports from Easton, on the Eastern Shore, state that the paper mill of that place is taxed to its fullest capacity in the manufacture of straw board.

A. E. Crevier & Co., of 180 William and 26 Spruce streets, New York, manufacturers and dealers in cards and card board, glazed and unglazed papers, &c., have opened an agency at 207 West Baltimore street, in this city. It is under the management of E. Rossmann, who will keep constantly on hand a complete assortment of cards and papers, like those of the New York house, and sell them at the lowest market prices. Mr. Rossmann advises the trade in this city that he has a full line of plain cards, menu cards, Christmas and New Year cards, beveled edge cards, orders of dancing, tassels, glazed and enameled papers, valentines, &c.

Apropos of valentines, I am reminded that J. R. Hope, the well informed representative of L. Prang & Co., of Philadelphia, dropped in to see me last week, with a charming assortment of cards intended for use through the mails on the 14th of February and thereabouts. The floral designs of some of these love letters are exquisite, and the verses accompanying them are in the main graceful and appropriate. A prettier lot of valentine cards no one could wish to see, and many a pansy and forget-me-not will make susceptible hearts flutter upon their receipt on the coming St. Valentine Day.

James H. Reed, late salesman in the blank book manufactory of John R. Edwards, is no longer in that employ. In giving up his place, however, he took unto himself a wife in the person of Mrs. P. Virginia Stewart, a lady who formerly resided in Richmond, Va., and is said to be blessed with a good share of this world's wealth. The marriage, which was solemnized last week, was of a very private character, and its announcement was a surprise to the friends of both parties.

Label printing, in the house of Guggenheimer & Weil, is increasing, and the firm is constantly in the receipt of large orders.

A second edition of Father Ryan's poems has just been issued by John B. Piet, and the sale keeps up as well as for the first, which was entirely disposed of during the late holidays.

Judging from the number of New York drummers in town the past week it is to be presumed that few are left to attend to home business. Among those who have honored us with their presence may be mentioned: J. Clarke Carter, of Robert Gair's paper novelties establishment; W. Baldwin, of Baker, Pratt & Co., importers and stationers; Will F. Park, of Hasbrouck & Watson, 51 Nassau street; representative of Kaufmann & Co., manufacturers of specialties and novelties, 107 Duane street; F. O. Evans, of S. Hildsheimer & Co.; Ferd. E. Russ; C. S. Cooke, of Cooke & Cobb, manufacturing stationers, 13 Whitehall street; George H. Lovegrace, of S. S. Stafford's ink manufactory, 218 Pearl street, and W. B. Robertson, of Anderson & Cameron, manufacturers and importers of stationer's goods. Pennsylvania was represented by J. R. Hope, above alluded to, and Wm. Emack, of the firm of Caskie & Emack, miners and shippers of slate at Slatington.

James H. Downs has succeeded Anderson & Son in the stationery, engraving and printing business, 26 North Charles street. W. P. M.

OHIO NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

DAYTON, O., January 24, 1881.

To-day the sun shines brightly and the indications point to warmer weather. We have had eight weeks continuous sleighing, something that the oldest inhabitant never saw before. One consequence of the very cold weather has been very low water in all of our hydraulics and loss of power. All of the mills are running short product on this account. Straw is very scarce and brings largely increased price, while coal is higher than for many years. These various causes have cut down the profit on paper, making it about zero.

Travelers from the various houses East are appearing every day. Among those who have been here are: Coffin, of the J. G. Shaw Blank Book Company; J. T. Hitchcock, of Morgan Envelope Company; T. F. Beach, of the New York Blank Book Company; Messrs. Smith and Morrell, of the Charles Ames Pocket Book Company and Weil, Livingston & Co., respectively; Frank Landers, of the Pewer Manufacturing Company. Expected arrivals are: C. E. Hopkins, James T. Watkins, and J. R. Tanner. Every one is glad to see them. They are sanguine as ever—that no one has so good a line or so low prices.

I cannot say that trade is brisk; the weather has been against it, but we look for better business about March. Valentines are in good demand, but there is not much call for Easter cards. Blank books are in good demand, as is usual at this time of the year. The duck covered books are driving out to some extent cheap half-bound and the lower grades of full-bound books. Envelopes are in better demand than for some months back; medium grades of papeteries find ready sale; the fine goods are all cleaned out of this market, but the trade in them is mainly for the holidays.

I find a growing tendency among consumers of pencils to refuse to pay ten cents for a single pencil, and a good pencil that can be retailed at five cents is in demand. Foreign makes, no doubt, feel the effects of this, as the market is, to some extent, the same all over the country. The growing art taste of the country which demands the finest grade of pencils for its proper development, may to a degree counterbalance the loss I have referred to. Another reason why domestic pencils find greater sales is the superior style of package they are put up in. I have endeavored to impress this fact on a leading maker of these goods, but without success. Manufacturers might as well make up their minds to reform as not, or they will lose their prestige throughout the MIAMI VALLEY.

NOTES FROM THE CAPITAL.

[CORRESPONDENCE OF THE STATIONER.]

WASHINGTON, D. C., January 24, 1881.

I have often thought it a pity you have no regular correspondent at such an important point as the national capital to contribute occasional letters about the book and stationery trades in this city. I wish, therefore, to make a few remarks on that subject for you to publish, to supply a want, as I conceive, till an abler correspondent can be found.

Washington is very full at present, although considerably less so than it will be at the beginning of March, when the Presidential inauguration is to take place, as everybody knows. Then "crowded" will be too weak a word to express its fullness.

Retail trade is very good, indeed, for such a normally dull month as January, in comparison with its predecessor. I have heard no complaints, all seeming satisfied, and more especially with their recent experience of the Christmas trade. Business was certainly late in resuming its proper magnitude, for not till the beginning of December, on Congress reassembling, could it be called really good, if I except the school book department of the business, which was brisker than in any former season during September. When it did set in for good, it soon came on like a mighty flood bearing the most valuable golden freight that Washington has ever towed into port, or rather stowed away in her fire and burglar proof safes. The demand for presentation goods and all articles required to demonstrate friendly feeling to those we love or respect was beyond all precedent. The booksellers and stationers certainly got the lion's share, or at least a very large slice of this patronage. Gift books for young and old, children's toy books, with plain and colored illustrations, were in great demand, but the most astounding increase was in the sale of Christmas and New Year cards, which must have amounted to at least three or four times that of the preceding season—that is, in actual money drawn, as far more expensive ones were sold than formerly; these, having run out first, had to be duplicated repeatedly. While embossed cards were greatly run upon the former season, it was the new silk fringed cards and Prang's prize cards that proved the favorites last Christmas. Large stocks of the fringed cards had been ordered by all the leading stationers in anticipation of their popularity, yet they were all sold off some time before Christmas and had to be reordered over and over again, until the manufacturers were unable to supply any more in time. Every stationer here tells the same story as his experience. "We thought we ordered quite enough, or even more than enough at the first;

but had we bought three, four, or six times as many, we could have disposed of them all." I am told that the two or three manufacturers who made a specialty of these goods, being determined to profit still further by their lucky hit, have prepared quite a large variety of new valentine cards, done up with improved silk fringes, thicker and heavier, and of many new colors or shades, as "Old Gold," "Moonlight," "Peach Bloom," &c. I have just seen forty varieties of Prang's valentine cards, with fringes of the most beautiful colors and tints, while inside of the fringes are the most exquisite designs it has ever been my lot to see. Some represent beautiful children in the daintiest of dainty costumes, others, the loveliest pansies, geraniums, and azaleas, reproduced with such skill, beauty and taste, that the very remembrance of them haunts me like a fairy dream.

Hildesheimer, Dando & Steveus' representatives have been around and shown fine lines of valentines, many of them very pretty. Dando's agent, Oliver Braden, had a very unpleasant experience when here. You are perhaps aware that this city has become exceedingly insalubrious during the last four months to travelers who arrive unprovided with licenses to do business in the District of Columbia, or who do not at once repair to the Tax Office and provide themselves with such. Mr. Braden, having failed to comply with this law, was arrested in his hotel when showing his samples in his own room to one of the leading booksellers here, and hurried before the constituted authority, cross-examined very closely to extort confessions as unfavorable as possible to himself, and to escape a prolonged imprisonment was compelled to disburse about $84, very narrowly escaping a penalty of $200. It is a most iniquitous imposition to compel a salesman to pay $200 if he wishes or requires to do business here, yet such is the law, which the Commissioners for the District enforce in the strictest manner possible. Every traveling salesman who comes here is dogged by detectives, his name discovered, and if no such name is on the license list he is immediately pounced upon, hurried before the inquisitor, and condemned to pay a heavy fine, or is imprisoned in default.

This law has been declared by good authorities to be totally unconstitutional, but what is wanted is a test case in the court to settle the point. The question then arises, Who ought to "bell the cat?" I think, with you, that the Stationers' Board of Trade ought to take it in hand. It would do more good than "wining and dining," although it would not be so pleasant, but more troublesome. If they have no funds for such a purpose let them solicit subscriptions. Plenty of money will pour in to fight such shameful laws, existing chiefly south of Mason and Dixon's line. Other trades ought to be invited to co-operate in this good work. All manufacturers and jobbers doing business, or desiring to do it, south of Pennsylvania, are interested in this question. The different States might as well be different countries—like the countries of Europe, ever watching each other for signs of hostility—as to have sach laws.

I regret to say that, to-day, a respectable traveling salesman here, without a license, is in more danger than in the wilds of the Rockies, so far as his purse or liberty is concerned. In one month, twenty-five representatives of high class and respectable houses were arrested. This has scared many former visitors from coming back. The storekeepers here are as disgusted at the enforcement of this law as the agents are. It has put them to very great inconvenience, through being often compelled to order goods without seeing samples; consequently, they have been unable to transact their business with that exactitude necessary to prevent the accumulation of bad stock. There is a rumor about a bill to be laid before Congress to do away with the present law, but in what stage it is I have been unable to ascertain. MERCATOR.

DOMINION NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

TORONTO, January 22, 1881.

There is something up in the weather office, that's sure. I don't know where the difficulty lies, whether with Probabilities or Vennor. At any rate, old Arctic has got his back up and has come down on us with a heavy hand, and has been puffing one cold wave after another across the continent with a reckless abandon truly surprising in one of his years. A singular feature about it is that it has been colder a long distance south than we have had it. St. Louis, Chicago and North and East it has been colder by several degrees than it has been in this city. I saw by the papers there had been two weeks' sleighing in Georgia, which is more than we have had, Outside of a circle of ten or twenty miles there has been plenty of snow.

The principal topic with us just now is the Pacific road syndicate. The opposition are trying to get up a diversion by organizing another syndicate, a purely home-made article; but there is no probability of its coming to anything just now, as the goverument is too strong and is, in fact, carrying out a scheme advocated by their opponents when in power. The point aimed at, however, is, that the government is offering too much; and though it may uot tell now, there is a chance that it may at the next election. How this will be we shall see if we live long enough. It is amusing to see with what glibness we have come to talk of multiplied millions, and toss them about like tennis balls in a racket court. It is not improbable that we might get up two or three more Pacific syndicates if Sir John would only let the thing run along for a month or two longer. But when we were just beginning to feel our oats and play pitch and toss with millions, as though we had always been used to it and there had never been a time in our history when we could scarcely scare up cents enough to make a respectable jingle, news comes from your side which knocks us all into a cocked hat. Shade of my grandmother! A syndicate of match-makers—who but a Yankee would ever thought of that? What a relief to match-making mammas—what a boon to poor bachelors who, aforetime, have had to survey increasing piles of buttonless shirts and vest hursts, and dear old maids, whose charms hitherto, through the perverse blindness of masculine obtuseness, remained undiscovered. Now all these little unevennesses are to be made straight. A new flame of joy, and brighter, will lighten up every h-house. Fires will be kindled on thousands of hymeneal altars that have only needed a spark to set them aglow. The time has surely come when the lamb and the lion shall lie down together.

After the rush and push of the holiday trade things seemed rather dull. The difference was very observable; but,notwithstanding this, business has been much better than usual with us at this time of year. One thing that has been against us has been the want of sleighing. Country people could get within ten or fifteen miles of the city with their sleighs and then had to take to wheels; but within a week a few inches of snow have fallen which, so long as it remains cold, will allow people to come to town in the good old way. Most of our wholesale men are taking stock, and do not object to a little slackness about this time.

Mr. Parsons, of Parsons & Richardson, booksellers and stationers, Winnepeg, called on me, and reports trade good there, and a general improvement all over the Prairie Province. Winnepeg is growing very rapidly, and is now the sixth city in commercial importance in the Dominion.

A pulp factory is about to be established in the county of Charlevoix, P. Q., by S. X. Cimon, who intends shipping pulp to England for the manufacture of paper.

A box manufacturer of Montreal has received, during the past fortnight, orders for 200,000 boxes—about three times as many as at the same period last year. This is an index to the great increase in business that is in progress.

Robert Marshall, whose new premises I noticed some time ago, has one of the most tastefully fitted up book and fancy goods stores in the city, if not in the Dominion. The woodwork throughout is done up in polished cherry, Eastlake style. The front is occupied with shelving for books and stationery. In the centre of the shop are wall cases on both sides, two feet deep, and divided in sections four feet in width. Each section is protected from dust by a single pane of plate glass, and the sash is hung on weights, so that it can be quickly raised without any effort to the top of the shelving. It is lit by sixty gas jets with globes, arranged on two rods, rounded at the ends, running the whole depth of the shop.

The Methodist Book and Publishing House has several new books in press; among them are "A Summer in Prairie Land," by Rev. A. Sutherland, D. D., and the "Life of Judge Wilmot, N. B.," by Rev. J. Lathorn. C. H.

EARLY PRINTING IN FRANCE.—France is one of the countries where printing spread with amazing rapidity, as will be sufficiently shown by the following list of printers who had established themselves in that country before the close of the fifteenth century:—1473, Buyer, at Lyons; 1477, Jean de Barre and Jean de Morelli, at Angers; 1478, Jean Lerouge, at Chablis; 1479, Jeau Teutonicus, at Toulouse; 1481, Pierre Schenck, at Vienne; 1483, Guillaume Lerouge, at Troyes; 1484, Josse, at Rennes; 1486, Dupres and Gerard, at Abbeville; 1487, Jeau Comtet, at Besancon, and Guillaume Levalleur, at Rouen; 1490, Mathieu Vivan, at Orleans; 1491, Pierre Metlinger, at Dijon; 1493, Michael Venssler, at Cluni and Etienne Larchet, at Nantes; 1495, Jean Berton, at Limoges; 1496, Tavernier at Provins, and Lateron, at Tours; 1497, Lepe, at Avignon; and 1500, Rosenbach of Heidelberg, at Perpiguan.

A NEW LIQUID GLUE.—A solution of 1 part of sugar in 3 parts of water, when applied to papergives to the latter neither lustre nor binding properties; but if to the solution be added ¼ part of slaked lime (calcium hydrate), and the mixture, after heating to 145—165° F., be macerated for a few days, with frequent agitation, most of the lime will dissolve, and the syrupy solution possesses both adhesive and glazing properties. If to 12 to 15 parts of this solution be further added 3 parts of lime, in small fragments, the latter will rapidly dissolve on warming, and, on cooling, will remain liquid, without losing its adhesiveness. According to the quantity of saccharate of lime present, the consistence of the liquid glue will vary; but in all cases it will have a strong adhesive power. This liquid glue may be used for a variety of purposes, but must not be employed in presence of coloring matters, which are decomposed by lime, such as Prussian blue, zinc green, &c.—*Polyteck. Notizblatt.*

OLD BERKSHIRE MILLS

DALTON, MASS., U. S. A.

One party writes: 'The two hundred RECORD BOOKS, for 83 of the 99 Counties, now on exhibition at the Iowa State Fair, at Des Moines; and all, but four (!) of them, made from your 'OLD BERKSHIRE MILLS LINEN LEDGER,' Medium, 40lb., make a splendid show."

[The above cut is a fac-simile of the wrapper used on the Linen Ledger Paper.]

We will pay for any book rejected on account of fault in the paper. Send for Samples, test them in comparison, and see that your books are made from paper thus water-marked.

OLD BERKSHIRE MILLS

LINEN LEDGER PAPER

Will stand the severest test of COLOR, CLIMATE, INK OR WEAR.

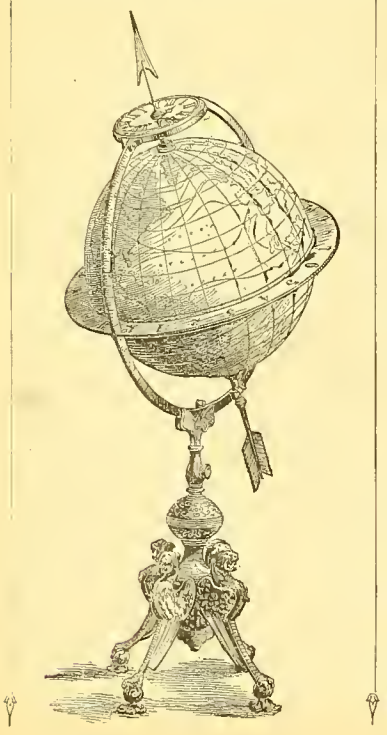
Being **Triple Sized** (a process entirely our own) and **Loft Dried,** can be erased and written upon the fifth time distinctly. None genuine without the water-mark and date, thus—**Old Berkshire Mills Linen Ledger, 1880.**

CARSON & BROWN CO., Manufacturers.

CANAJOHARIE, N. Y. **JUVET & CO.,** CANAJOHARIE, N. Y

—MANUFACTURERS OF—

Time Globes, Relative Time Globes, Tellurians, Celestial,



AND VARIOUS FORMS OF TERRESTRIAL GLOBES.

The **Time Globe**—see illustration—is not only a perfect geographical globe, but is also a time piece, each part working independent of the other and perfect in both. By means of internal mechanism the Globe is made to revolve once in twenty-four hours—as does the earth. **Universal Time** is obtained **without computation.** It is a **Stem Winder, regulates** from the **outside,** and runs four days without rewinding. Sizes, 6, 12, 18 and 30 inches. Prices $75 to $600, according to size and style of mounting.

The **Relative Time Globe,** while capable of performing **all** the problems of the ordinary **Globe,** gives in addition **Universal Time without computation.** Sizes, 6, 12, 18 and 30 inches, Prices, $35 to $300, according to size and style of mounting.

Tellurians, Celestial and **Terrestrial Globes,** so mounted (new designs) that no part of the map is hidden from view. Sizes, 6, 12, 18 and 30 inches. Prices, $3 to $250.

Above described Globes are **all** made of a new material, which, unlike the old plaster and clay Globes, will not fracture; in fact the shell is so strong and well made that it will be economy to recover in case of geographical changes or injury to the map.

All full Meridian Ring Globes are mounted with swiveled clutch, which allows them to be placed at any desired angle. None but the latest and most perfect maps used.

Meridian Rings are of **Brass,** and **carefully** graduated.

ALL ORDERS WILL RECEIVE PROMPT AND CAREFUL ATTENTION.

FOLEY'S
Celebrated Gold Pens and Pencils
THE FINEST AND BEST.

CIRCULAR.—To those engaged in mercantile pursuits, any invention that will facilitate their labor is highly worthy of notice, as well as of extensive patronage. One of the most important inventions of the present age is that of a pen that possesses the necessary qualities of firmness in mark and durability in use. Pre-eminently such are those of JOHN FOLEY, Manufacturer of Fine Gold Pens and Pencils, No. 2 Astor House. Their superior value is tested by the long time he has been engaged in our city in their manufacture. We, the subscribers, who know the value of FOLEY'S PENS from constant use of them for a number of years, cheerfully recommend them to those who wish for the best and most perfect Gold Pen ever made.

L. PRANG & CO.'S

Valentines for 1881.

We take pleasure in herewith presenting to the trade our Price List of Valentines for this Season:

ASSORTMENT.—Our Valentines are made up in sets of one dozen, except Series 1, where six constitute a set, and are put up in a box or envelope. Each set contains all the designs of the series; and as no series has more than six designs, each design is more or less repeated in the set.

ENVELOPES.—Fine Cream-Tinted Envelopes are furnished with every series, except Nos. 9, 11, 15, 16, 17, without extra charge.

VALENTINES WITH SILK FRINGES.—We would call especial attention to these, as they will doubtless prove very attractive. These goods are made up with the best quality heavy silk fringe, made expressly for us. All fringed Valentines are furnished with protectors and envelopes, and are put up with assorted colors of fringes.

LIST OF PRANG'S VALENTINES FOR 1881.

Trade Novelties.

[We will be glad to receive samples of all novelties issued in the trade, and will notice all such which possess merit free of charge. It is desirable to accompany descriptions with cuts whenever possible.]

NEW PATENTS.

No. 236,222. Stylographic Fountain Pen.—George F. Hawkis, New York, N. Y., assignor to Charles W. Livermore, Providence R. I.

1. In a stylographic fountain pen the combination of the handle containing the ink fountain or reservoir with a needle holding and supporting centre post attached to and supported by the handle. 2. In a stylographic fountain pen the combination, with a sectional handle, of the needle holding and supporting centre post inserted and secured to the lower section of the handle. 3. In a stylographic fountain pen the combination of an adjustable needle-holder with a removable tubular coupling, serving to connect the spindle-holder, point section and main reservoir together. 4. In a stylographic fountain pen the combination, with a handle containing the ink reservoir in its upper section, of a lower section containing the writing spindle and of a connecting tubular coupling having a needle holding and supporting centre post. 5. In a stylographic fountain pen the combination of a handle containing an ink reservoir, intermediate coupling provided with discharge orifices and a centre post, interior spring-cushioned needle and a needle-containing tube having interior contraction or shonlder.

No. 236,227. Account Books.—Edwin B. Hutchinson, Dtroit, Mich.

No. 236,244. Mount for Chromos and other Illustrations.—A. Joseph Nurre, Cincinnati, Ohio.

A chromo, print, or show card permanently secured to a "mount" composed of two or more thin pieces of wood attached to each other, with their grains crossed, the outer veneer, to which the picture is applied, being free from tracings or scrolls, or any large opening, and the exposed face of the picture being protected with a transparent varnish.

No. 236,262. Tag Machine.—Charles M. Richardson, Bridgeport, Conn., assignor to William C. Wildman, same place.

Tags are cut and punched from a continuous web of paper fed to dies. A string is then inserted through the hole and the end drawn back sufficient in length to form a loop. The cord is then grasped by gripers and severed by a cutter. The tag is then grasped by gripers, and as it is carried from the dies a revolving horn ties a knot in the ends of the cord. The tag is then deposited upon a belt and carried from the machine.

No. 236,264. Toy.—Charles F. Ritchel, Bridgeport, Conn., assignor to Edward R. Ives, same place, and Cornelius Blakesley, Brooklyn, N. Y.

No. 236,320. Arithmetical Frame.—Frederick B. Ginn, Oakland, Cal.

No. 236,387. Addressing Machine.—Charles T. Welch, Bellona, N. Y.

236,404. Hand Stamp.—George T. Adlington and John N. Webster, Peoria, Ill.

No. 236,427. Paper Feeding Machine.—Frederick W. Griffith, New York, and George P. Byrne, Brooklyn, N. Y., assignors to Garrett S. Byrne, Newark, N. J., and John Forsythe, New York, N. Y.

No. 236,457. Pencil Holding Slate.—W. Gilbert Reimer, Philadelphia, Pa.

DESIGNS.

No. 12,111. Font of Printing Type.—John K. Rogers, Brookline, Mass. Term of patent, 3½ years.

Nos. 12,120 and 12,121. Font of Printing Type.—John K. Rogers, Brookline, Mass. Term of patents, 3½ years.

LOCKWOOD PRESS.

HOWARD LOCKWOOD,

Proprietor,

No. 74 DUANE STREET, NEW YORK.

There is no art so diverse in its application, or so prolific in its results, as the art of printing.

*

Bad printing is an abuse of art. It condemns the printer and works injury to him who accepts it.

BOOK, NEWSPAPER AND JOB

STEAM PRINTING ESTABLISHMENT.

The LOCKWOOD PRESS has been awarded high honors at the several International Exhibitions where its work has been exhibited.

THE GOLD MEDAL
OF THE
SYDNEY INTERNATIONAL EXHIBITION,
1879,
—Awarded to—
THE LOCKWOOD PRESS.

LANGUAGE OF JUDGES' AWARD:

"This exhibit is equal to anything produced in London or indeed anywhere else. The type is sharp and distinct, the wood-cuts so artistically brought up and worked that they resemble steel engravings; the paper has a beautiful glazed surface, and the ink, which is a copy black, is distributed with perfect uniformity."

FIRST DEGREE OF MERIT (SPECIAL).

Paris International Exhibition,
— 1878.—
A DIPLOMA
AND
HONORABLE MENTION
—TO—
The Lockwood Press,
FOR
FINE PRINTING.

THE SILVER MEDAL
OF THE
SYDNEY INTERNATIONAL EXHIBITION,
1879,
—Awarded to—
THE LOCKWOOD PRESS.

LANGUAGE OF JUDGES' AWARD:

"Specimens of photo-engraving in the shape of a small volume reduced to one-quarter of the size of the original publication—THE AMERICAN MAIL AND EXPORT JOURNAL—very clear, easily readable, and showing progress."

SECOND DEGREE OF MERIT.

FINE CATALOGUE PRINTING A SPECIALTY.

THE importance of fine work in the printing of catalogues, pamphlets, &c., cannot be too highly estimated. The character of a firm is always gauged by its products, and a house that sends out ill-printed catalogues or other advertisements of its business, secures a reputation for cheapening its work. A little—very little—more money than is charged for poor work will pay for a finely printed catalogue, artistic in all of its details. A coarse, common piece of work is cast aside, while a handsome catalogue is preserved, not only for its beauty and suggestiveness but because it is thought there MUST be something within its pages valuable for reference.

The Lockwood Press is noted for first-class typographical work. It has its own steam presses and all of the appointments of a fully equipped office. Special attention paid to orders from the trade. Manufacturers and others invited to send for estimates. Orders from any part of the country will be executed **promptly and with dispatch. No time lost in the execution of orders**—Cards, note heads, &c., circulars, books, newspapers and catalogues of all descriptions. Cut work handsomely and carefully executed.

LOWEST PRICES CONSISTENT WITH GOOD WORKMANSHIP.

Circulars, Catalogues or Books accurately translated and printed in English, French, German, Spanish or Portuguese. Estimates furnished for good, fine and superfine work, from a small circular to the most expensive catalogue or book.

Special attention given to all orders for fine wood engraving by the best artists, on the most favorable terms. Electrotypes furnished, mounted on wood or metal, at short notice.

The undersigned will also produce, in miniature or enlarged form, by the best process yet discovered, electrotype plates of wood-cuts, price lists, catalogues, &c., an ordinary proof-sheet being all that is necessary for their production. In applying for estimates send one copy of the work to be reduced, with the size desired, and, if required to be printed, the number of copies wanted. Address all orders to

HOWARD LOCKWOOD, Printer and Publisher,
No. 74 DUANE STREET, NEW YORK.

AMERICAN DEPOT:
No. 218 Pearl Street,
New York.

STAFFORD'S
AMERICAN WRITING INKS

ENGLISH DEPOT:
21, 23 & 25 Birchin Lane,
London, E. C., England.

Have obtained the Highest Awards every time they have been exhibited. They were awarded the Bronze Medal at the Toronto (Ontario) Exhibition of 1880, being the only award made for Writing Inks.

Universal Writing Ink, the only jet black fluid in existence. **Commercial Writing Ink**, ultramarine blue at first, changing to jet black. **Violet Black Copying Ink** copies as well after three months as when first written. **Blue-Black Office Ink**, the most perfect combined writing and copying ink made. **Writing and Copying Carmine**, the standard carmine ink of this country, **Knickerbocker Ink**, for schools, &c. **Chemical Writing Fluid**, an exact reproduction of the English fluids. **Indelible Ink** writes jet black, requires no preparation, absolutely indelible. **Writing and Copying Violet Ink**, an unusually strong and permanent preparation. **STICKWELL & CO.'S CELEBRATED MUCILAGE.**

Stafford's Inks are used by the British Government, the United States Government and the public generally in the United States, England, Canada, Australia, South America, Cuba, &c. ☞ Orders and inquiries should be addressed to the manufacturer,

Also, No. 1 White and Tinted Bristol Board.

Trade Gossip.

All new goods and designs which are not, strictly speaking, "Novelties" will be noticed under this head. The trade are requested to forward descriptions with samples in order to secure proper notice.

Daniel P. Cook, Hartford, Conn., has failed.

B. B. Russell & Co., publishers, Boston, Mass., have failed.

I. H. Hamburger will move on February 1 to 324 Broadway.

Martin & Bennett, printers, Brooklyn, N. Y., have dissolved partnership.

A. E. Jacques, stationer and bookseller, Wilton, N. H., has been burned out.

The bookstore of Hamilton & Rockafellow, at Deadwood, D. T., was burned on January 19.

J. Fred Waggoner has succeeded the Union Bag and Paper Company, publisher, Chicago, Ill.

A. Weidmann & Co. show one of the largest lines of costumers' materials of any house in this country.

Emil Bloch, dealer in notions, &c., New Orleans, La., has applied for relief in bankruptcy under the State insolvency law.

Laidlaw, Patullo & Co., printers and publishers, Woodstock, Ont., Can., have dissolved partnership. Patullo & Co. succeed.

Ivison, Blakeman, Taylor & Co. have removed to 753 and 755 Broadway, where they occupy the whole building with the exception of the stores.

A. H. Goetting and four of his travelers are now on the road, and have with them an exceedingly fine line of samples, including papeteries, writing papers and scrap books.

True S. White, for a long time connected with the St. Paul Book and Stationery Company, has severed his connection with that house, and is now open for engagements in his line.

Myers Brothers have this week opened some large lots of De La Rue's valentines, and from the demand for them the firm is under the impression that very few will be left by February 14.

The Springfield Printing Company, Springfield, Mass, forwards several samples of its calendars for 1881. These are got up in weekly, monthly and full sheet forms. This house manufactures the patent advertising calendars.

Henry Levy & Son, 477 Broadway, will in a few days have ready for inspection their new line of French, Vienna, Japan and Florentine fans. The firm has the sole agency for the latter, which comprises many new and pretty designs.

The Belton (Texas) *Journal* says: "'Tex,' the newsdealer, is now occupying the J. Q. Allen building on Main street. 'Tex' has built up his business slow but sure, until now he carries a magnificent stock, and the large additions he is constantly making to his stock show that the public substantially appreciate his efforts."

W. Waters & Son's daily pad calendar is taking very well, the retail style in particular. They also furnish calendars for advertising purposes. The firm's trade in this line of business has increased very much, and almost all of its stock is sold out, and it has constant calls for more. The retail kind are bound in cloth and gold, are cheap for the quality, very pretty, and complete in their arrangement.

The American Slate and Crayon Company, 39 Dey street, has been appointed sole agent for the sale of the well known soapstone pencils, manufactured by the Vermont Slate and Alum Company, from stock taken from the celebrated quarries at Castleton, Vt., and from which it is claimed the home as well as the export trade have been supplied for more than thirty years. These pencils are made by new and improved machinery, and will be known by the natural dust or flour on them. They are now made with a finer finish than ever before, and are said to be unsurpassed for color, strength and softness, making a clear and distinct mark upon the slate. The pencils are all pointed, and are neatly put up in paper boxes of one hundred pencils each, full count, and packed in durable cases of 100 boxes (10 M.) each.

Bliss & Trowbridge, dealers in stationers' hardware, of this city, deeming it advisable not to continue business in the present condition of affairs, a few days ago called a meeting of their creditors, which was held at their office. A committee was appointed to examine their books and ascertain the condition of their assets and liabilities. A proposition has been made by the mother of Edward Trowbridge to buy the claims of the creditors at 33⅓ cents on the dollar, giving her notes at four, eight and twelve months in settlement. This proposition has been accepted by many of the creditors, and is recommended by the committee. The business will probably be continued by Mr. Trowbridge on his mother's account, E. E. Bliss, his late partner, retiring.

Very few people know all about saws, and even mechanics who are required to use them fail to have a thorough understanding of such tools. A very compendious work, "Grimshaw on Saws," lately issued from the press of E. Claxton & Co., publishers, Philadelphia, Pa., is one of the best of the comparatively scarce practical treatises on everyday tools to be found in the market. This book has many points of detail not before brought together, and is descriptive of different kinds of saws, their action and treatment. It also contains valuable suggestions to every person who uses saws.

D. B. Brooks & Co., 17 Franklin street, Boston, have reduced the price of the "Parlor Cue Alley," which they have been manufacturing for ten years, so that it can now be retailed at $10. This alley is a parlor tenpin game, made in hard wood and provided with all the necessary implements, such as pins, balls and cue. It affords amusement and present opportunities for the display of skill, and can be enjoyed by old and young alike.

The latest catalogue and price list of the Graham Paper Company, St. Louis, is a ready reference catalogue, indexed on the outer margin and very convenient. A glance will enable any person using it to turn to the list of goods for which he is searching.

Hasbrouck & Watson's catalogue and price list of specialties is now ready for distribution. This is one of those handy things that the stationer wants to have around the house.

W. W. Edgar, booseller, stationer and newsdealer, Pittsburg, Pa., wants catalogues containing club rates for newspapers and magazines.

E. E. Bliss will engage in the stationers' hardware business as soon as the affairs of the late firm of Bliss & Trowbridge are settled.

E. L. Gaylord, Bridgeport, Conn., was among the visitors to the city during the week.

Henry M. Pugh, bookseller and stationer, Wellsville, Ohio, is closing out.

J. F. Linton, publisher of the *Legal Record*, Columbus, O., has sold out.

B. K. Neufville, stationer, &c., Charleston, S. C., has made an assignment.

Chas. Liebenthal, dealer in notions, Columbus, O., has made an assignment.

John W. Och, bookseller and stationer, Allentown, Pa., has sold out to E. H. Blank.

Among the new valentines introduced this season are some in the shape of pin cushions.

Hawkins & Co., printers, Toronto, Ont., Can., have compromised at fifty cents on the dollar.

N. S. Otis starts this week on a trip to the West for the Acme Stationery and Paper Company. He will take in all the principal places between here and the Rocky Mountains before his return.

The H. & W. files are selling faster than machinery can turn them out. Everything goes to prove their popularity, and as they are being extensively advertised, every house in the trade is acquainted with them. All who see them acknowledge that they are superior articles. Samples can be had of any jobber.

New goods for the spring trade are beginning to make their appearance. Among the earliest in the field with a line of fine autograph albums are Koch, Sons & Co., who show elegant embossed designs in autumn leaves, butterflies and animals, which they say are the most attractive goods in that line they ever brought out.

E. & H. T. Anthony & Co., show this week an exceedingly neat line of painted porcelain placques, and a new and handsome line of ebonized wall pockets. The latter are finished in the most elaborate style, with rarely executed hand-paintings and gilt figures of prominent subjects, stamped in the wood. This house will handle, during the coming season, goods which will surprise many members of the trade when they see them.

The card and card board establishment of P. P. McHugh, on the first floor of the four-story brick building, No. 51 Ann street, took fire on Friday night, and caused a loss of $8,000. Wm. Day occupied the upper floor as a manufacturer of paper gas and lamp shades, his stock being damaged about $1,000. P. Nevins, a paper stock dealer, occupied the basement; his stock was only slightly injured by fire and water. The building, which is owned by Louis Duer and brother, was damaged $2,500.

The committee appointed by the creditors of P. Fleischner & Co., Philadelphia, have reported that M. H. Pulaski, of the firm of Guggenheim & Pulaski, of that city, will buy the claims against P. Fleischner & Co. at 30 per cent. of their face value, and give his notes at six months for the amount of that percentage, provided that 90 per cent. of the total amount of the claims are assigned to him on or before January 31, 1881. The committee recommends the acceptance of this offer, as, in its opinion, more can be realized in that way than in any other.

The Acme Stationery and Paper Company, 117 Fulton street, has brought out something new for lawyers' use in the form of brief books. These are intended to be used for getting up briefs, or the notes and memoranda in any cause, so that they may easily be preserved for future reference. They are brought out in such convenient form, style and sizes that they have already met the approval of a great many lawyers who have seen them and who are beginning to use them. They are made in four sizes, with 24, 40, 60 and 100 pages respectively, bound in strong covers, with an index for "points" on one

side, and a filing blank on the other, folding to the usual size.

Frank M. Seaman, printer, Rochester, N. Y., has made an assignment.

Gray, Davis & Co., publishers, Nevada City, Cal., have dissolved partnership.

L. Fried has retired from the firm of Neuberger, Messner & Co., wholesale dealers in notions, New York.

Jacob Krauss has been admitted to the firm of Giffhorn, Potheman & Co., wholesale dealers in notions, Cleveland, O.

John Lutz, bookseller and stationer, and publisher of the *Bedford County Press*, Bedford, Pa., has sold out to Mullin & Buckingham.

T. G. Merrill has retired from the firm of D. D. & T. G. Merrill, booksellers and stationers, Minneapolis, Minn., and George N. Culver has been admitted. The style is now Merrill & Culver.

The partnership heretofore existing between Alfred Hopcraft and Clarence L. Milliken, under the firm name of Hopcraft & Co., has been dissolved. The business will be continued by Alfred Hopcraft.

"Southeastern Kausas" is the title of a book written by a member of the Chicago press. It is neatly gotten up and well written, contains full map and gives full and reliable information in regard to all counties in Southern and Southeastern Kansas, the more fertile portions of the State—with map of each county. Also valuable information in regard to the great lead or zinc mines of Southwest Missouri and Southeastern Kansas. The book is for gratuitous distribution and may be had free of postage by addressing J. E. Lockwood, Kansas City, Mo. It should be in the hands of every person going to Kansas.

Charles J. Cohen, Philadelphia, has introduced to the stationery trade a neat glass showcase (size, 8 by 10 inches), containing a full assortment of all the sizes of Henry Cohen's ever-point, propelling and artists' leads, with wire gauge of sizes. The wholesale price is $3, each net. Every stationer should have one, as it facilitates the fitting of leads to gold and other kinds of propelling pencils, and keeps the stock clean and in admirable order.

The firms of Matthews Brothers & Bryant, book and job printers, and William P. Northrup & Co., electrotypers, Buffalo, N. Y., having dissolved, a partnership has been formed by all of the partners in both firms. The business of both houses will be continued under the firm name of Matthews, Northrup & Co.

Potsdamer & Co., Philadelphia, have published four new sets of "folders," five designs each, which, it is said, excel anything of the kind they have ever brought out. This is saying a good deal. This house has also some new designs in chromo advertising cards.

The paper mill at Hamburg, Sussex County, N. J., owned by White & Co., of Bloomingdale, N. J., was burned early yesterday morning. The fire was of incendiary origin.

S. Hirshbach, this city, has issued his 1881 price list for slate pencils, scholars' companions, slates, &c.

W. C. Barker, dealer in fancy goods, Glen's Falls, N. Y., has been burned out. Loss, $5,000; insured for $1,500.

J. Samuel Bee, Jr., bookseller and stationer, Charleston, S. C., has made an assignment.

The Dillingham Paper Company, paper dealer, Boston, Mass., has sold out.

Mrs. L. Loeb & Co., dealers in notions, Dallas, Tex., has been burned out.

Maynard & Chambers, printers, St. Louis, Mo., have dissolved partnership.

Worley & Milne, publishers of the *Independent*, Stockton, Cal., have sold out.

S. M. Griffin, publisher of the *Patriot*, Franklin, Ky., has sold out to Lewis & Moore.

A. H. Belo & Co., publishers of the Galveston (Tex.) *News*, have dissolved partnership.

Burr & Robinson, printers, Bangor, Me., have dissolved partnership. B. A. Burr continues.

George Wooley, dealer in fancy goods, Waltham, Mass., has made an assignment.

Miss K. H. Croxford & Co., dealers in fancy goods, Winterport, Me., are advertising to close out.

Arthur E. Marsh has just returned from a trip of several weeks in the West for Koch, Sons & Co.

A. M. Littlefield, dealer in notions, Sanford, Me., is in insolvency, and has been closed by the sheriff.

E. H. Jones & Co., wholesale dealers in fancy goods, San Francisco, Cal., have dissolved partnership.

Frederick Zeigler, bookseller, newsdealer, &c., Vernon-Rockville, Conn., has sold out to William Randall.

The stock of the Worcester Paper Company, paper dealer, Worcester, Mass., has been attached.

Richardson Brothers, publishers of the *Democrat*, Davenport, Ia., have been succeeded by the Democrat Company, incorporated with a paid-in capital of $15,000.

PERFECTED STYLOGRAFIC.

The original and genuine Pen. Warranted the best made. Thirteen Patents granted to **A. T. CROSS,** the last, June 29, 1880, being the most important and giving the name **Perfected.** All cuts are exact size

MAXIMUM.—Holds most ink of any pen made; tires the hand less than smaller barrels. Fits Hambler's Pocket. Same price as Long.

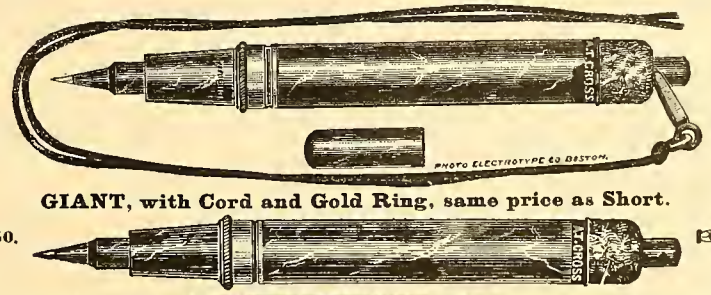
LONG.—The famous Desk Pen. Extra long. Holds most ink, except the **Maximum.**

SHORT.—Most widely known and sold heretofore; but Maximum is better for desk

or Hambler's Pocket, Giant for Vest Pocket or Cord. So this will be largely superseded.

Thirteen patents granted; seven more applied for; more genuine improvements; better record; more styles; larger stock; more thoroughly protected by patents than all rivals combined.

☞See Descriptive Circulars.



GIANT, with Cord and Gold Ring, same price as Short.

Dealers and agents supplied with wood, glass and paper signs, placards, circulars, leaflets and cuts. We make both largest and smallest Pens, both of which will have all new improvements.

☞See Descriptive Circulars.

VEST GIANT, Plain, - - $2.50.

All Styles up to $4.00.

☞ **VEST GIANT.—The Cheapest PERFECTED Pen made.**

This Miniature Cut is for Agents' Cards, Newspaper Advertisements, &c., &c., &c.

THE STATIONER.

DEVOTED TO THE INTERESTS OF THE

Stationery and Fancy Goods Trades.

WEEKLY---$2.00 PER ANNUM.

Single Copies - - - - 10 Cents

NEW YORK, THURSDAY, JANUARY 27, 1881.

Advertisements cannot be received for insertion in the current week later than 12 M. on Wednesday. The charge for advertising is 25 cents a line, each insertion. Special terms for standing and displayed advertisements to be had on application.

This journal aims to be a medium of information for and a representative of the interests of every one connected with the stationery and fancy goods trades. It contains a full and trustworthy survey of the market for stationery in this country, in all cases giving the actual prices at which goods can be bought of importers and jobbers in this city, together with a detailed account of novelties in the trade, patents relating to stationery, and current items of interest. A review of foreign markets and accounts of movements abroad will also be furnished, and no pains will be spared to make THE STATIONER a thorough and complete exponent of the trade.

Subscription and postage for Great Britain, per annum..... 12s.

Any information our readers may wish to obtain shall be cheerfully given, and prompt replies will be made to all inquiries addressed to us on any subjects of interest to the trade.

Communications on all trade matters are earnestly solicited. Address

HOWARD LOCKWOOD, Pres. and Treas.
American Stationer Association,
74 DUANE STREET, NEW YORK.

Subscribers to THE STATIONER can he supplied with the best cloth binder in the market. Deliverable at the publication office. Price, fifty cents.

Readers of this paper who avail themselves of the information obtained from its columns, by advertisement or otherwise, are requested to notify their correspondents of the source of their information.

QUITE a number of failures have been reported lately. This is tbe weeding out and closing up of firms which have only been waiting for tbe eventful day when they should be "brought to book." The list is not alarming, and as to the stationery trade is very satisfactory.

No livelier question in reference to trade convenience and personal rights exists than that of special license. The burden of special tax laws, with their injurious and unjust discriminations, bears equally upon all lines of business; but, if the adage that what is everybody's business is nobody's business shall prevail in our treatment of all important subjects affecting general trade interests, we may well despair of progress or of getting relief from any of the ills that beset commerce.

WAITING upon one and the other, or making modesty the subterfuge for inaction, will not avail any trade organization after it has been called upon to act in behalf of those who have the claim to its support. And even if the *res adjudicandi* are equally important to other interests, it ill becomes any body claiming to be trade representative to ignore the fact that an evil to be remedied must be attacked in force, and that, where too much would fall upon an individual anxious to test an issue, support must be given, morally and financially, for the purpose of combating the abuse. A correspondent again directs attention to the outrageous imposition upon commercial travelers and the annoyances to which they are subjected in certain parts of the country. He cites an instance in the District of Columbia. This is perhaps the opportunity for which the Stationers' Board of Trade has been waiting. Here is one member of the trade arrested and mulcted in an extravagant sum simply because he opened his samples and offered to take orders in his private room, in Washington. As the national capital is the property of the whole country, and as it would not excite any conflict as to State rights, let us begin right there in the work of reform. Our Board of Trade can the better do this because several of its members are concerned in national politics, some of them being actually members of Congress, and therefore having of right the power to take up the matter and advise and labor for a change. We therefore invite Mr. President Wallach and his associate trustees of the Board of Trade to immediately declare their views in favor of the abolition of the license tax in the District of Columbia. and to appoint a committee to urge it upon Congress. Some of our legislators might be put on the committee. But we would not have the thing stop here. Invitations should be sent out to the commercial associations in different parts of the country, asking for a conference or making inquiry if they will unite in paying the expense of making a case for the courts. Such action will not derogate in the least from the dignity of the board. We certainly would not wittingly suggest anything that might detract from that lofty grandeur of thought, speech and manner, wherewith some of its members are apt to endue themselves. But in this instance there is an opportunity to add to the distinction which the board is supposed to enjoy and, what is better still, there is a chance for it to secure a more solid hold upon the respect and affection of the trade.

Communications.

[Correspondents are reqnested to write on only one side of their paper. No responsibility for the opinions of correspondents attaches to this paper.]

A Critical Diner Out.

To the Editor of The Stationer:

I am a regular reader of your paper and have always taken the greatest interest in its apparent success; but I must call your attention to the very inferior way in which you reported the annual dinner of the Stationers' Board of Trade.

You surely show a wonderful lack of respect for Mr. Beecher and the other prominent members of the stationery trade. Why did you not report in full Mr. Beecher's beautiful speech. Why did you not embalm in everlasting type his brilliant remarks concerning the oyster and the soup, &c.? Of what possible interest is it to your readers that "prices remain unchanged," or that "Messrs. So and So are quite unable to fill their orders for the last new specialty," when you might fill your paper with the "General's" eloquent extracts and funny stories—at least I suppose they are funny,—and why shouldn't you give these things to your readers so that they may gain increased knowledge of their business. Surely everything that transpires in New York which is of real interest and great value should be fully reported.

Again, you did not print any diagram showing the arrangement of the tables, the position of members, &c. All this betokens a most deplorable indifference to our real wants and I, on behalf of, I am sure, many readers, beg to protest.

I suppose that next year the Board will have Mr. Talmage and the Chinese Giant and Sitting Bull, beside many other prominent persons connected more or less intimately with the stationery trade; and if you again neglect your duty your many readers will be again deprived of the rich, intellectual treat that will be sure to ensue.

So, please don't forget to give us all the speeches, and all the funny (?) stories, and all the laughter, because that is just why we buy trade papers, and you can easily drop for one issue your useless notes concerning the state of trade, and beside you may get paid for the advertising, for, of course, I am not green enough to suppose that it would be all free, although it would be doubtless very cheap.

Please pardon me for taking your time; but, as a stationer's clerk, I look anxiously for anything that will benefit me in my business, and I feel sure that you will not make the mistake again. Very respectfully yours,

STEELE PENN.

Among the visiting members of the trade in the city during the week were True S. White, of St. Paul, Minn.; W. T. Tibbitts, of Tibbitts & Co., Providence, R. I., and J. B. Lalley, of J. B. Lippincott & Co.

William C. Horn, of Koch, Sons & Co., has been confined to his house for several days, because of a slight indisposition.

A fire which broke out in the large double building, Nos. 56 and 58 Park place and 51 and 53 Barclay street, early Friday morning, damaged considerable property. The second floor was occupied by D. S. Walton & Co., printers of paper wrappers. Thirty people were employed in the work. They used in their business eleven presses. Mr. Walton places his losses at $30,000. The value of stock and machinery is $50,000. They are insured in foreign companies for $40,000. The three upper floors were occupied by Major & Knapp, lithographers. The third floor, in which the fire originated, was used as a printing and transfer room. There are many large presses in this room, and many valuable stones, used in printing. The fourth and fifth floors were used as storage rooms, drying rooms, &c.

T. B. Peterson & Brother, Philadelphia, have published "Madame Bovary" by Gustave Flaubert. The story is interesting, but scarcely so remarkable as Emile Zola in his criticism of it would have people believe. It is not suitable for every reader—certainly not for those to whom it might make suggestions which would be better avoided. Prurient minds may find all the gratification necessary in perusing its pages, and perhaps shun the perils which the story discloses. The heroine is a woman of high aspirations, longing to rise above her class, and falling, because she has not that high sustaining power which virtue lends to every effort for advancement.

Awards of contracts for paper for the Government Printing Office were made by the Joint Committee on Printing on Tuesday. The largest awards for printing paper were made to the Sugar River Paper Mill Company, of New Hampshire, Jessup & Moore, of Philadelphia, and the Fairchild Paper Company, of Boston, at from 7 9-10 cents to 9 cents per pound, and amounting to about 70,000 reams. For writing paper, amounting to over 40,000 reams, Woolworth & Graham, H. V. Butler & Co., of New York, and others, were awarded the contracts at from 9 8-10 to 15 9-10 cents per pound. For glazed bond paper the awards were to Dobler, Mudge & Chapman, of Baltimore; Woolworth & Graham, of New York; the Whiting Paper Company, of Holyoke, Mass., and George McDowell & Co., of Philadelphia. For card board, to Dobler, Mudge & Chapman, of Baltimore; Woolworth & Graham, A. J. Trier, J. F. Anderson, Jr., & Co., of New York, and others.

DESIGNS OF ORNAMENTS.

Professor Richmond says that the use of wax as a medium wherein to model will be found most handy. Unlike clay, which is difficult to manipulate excepting upon a large scale, and besides the necessity for constantly wetting it, this for one who can only give odd moments to modeling is decidedly against its adoption. Unlike clay, wax needs no wetting, and further, it can be worked with the utmost minuteness and finish, so it is well adapted to design upon a very small scale. Wax for modeling can be purchased, but it is dear. Any one who will take the trouble to do so can make it for himself, thus: Heat gently linseed oil, turpentine and beeswax, but do not let them boil; add a little glycerine; a few experiments will show what is the proper portion each ingredient should bear to the whole. When cool, the material thus made ought to be nearly hard; but, at the same time, by the heat of the hand it should be reducible to a malleable substance, ersily to be worked. Let us suppose for a moment that some one has a desire to design a frieze of ornament. Having decided how high the relief of the design is to be, let him go and look at the treatment of such a quantity of relief in any Greek or Italian example he can gain access to. Then from the sketch-book store that he has gathered from nature, let him arrange and put together his design, drawing it carefully and with due consideration for balance of the masses to be disposed in tranquility, or in manifold minuteness of details upon paper. Having decided, considered and studied, let this drawing be traced upon a slate or board, and the wax laid on carefully in strips over the lines and forms of the design, leaving the flat surface of slate or wood as the background. In the modeling as much as possible should be done with the fingers; there is no tool so good, so delicate, or so sensitive. But where fine incisions are to be made—so fine that the finger cannot accomplish them—a bone tool should be made use of, and this tool while in use should be occasionally dipped in oil, that it may work freely and not stick to or drag away the wax. If it should enter into the mind of any one to try this plan, he will find it a delightful pastime and a valuable study. But mind, do not do it roughly. Execute it delicately, finish carefully as you go and take care to make the execution as perfect as you are able. Not only as an exercise in relief may this be useful, but fancy may be employed on capitals of columns, moldings, or what not, or invention and fancy may engage themselves in devising with pleasure. Design is very much a matter of habit. It is always difficult to make a beginning. All first lines seem disheartening, and do so poorly represent anything at all that the mind conceives and desires to accomplish that at first they seem futile. Do not be disheartened, but go on and try to do more; and the more you do, if you exert yourself with a real will and strong desire to overcome all difficulties, easier and easier, more and more delightful, you will find your occupation to become. Every one does not command large rooms in which to work, so that any design upon a large scale would be objectionable. The advantage of wax is that it will bear to be used upon the minutest scale; therefore any student with the smallest room, would not find inconvenience from want of space wherein to execute his work.

Market Review.

OFFICE OF THE AMERICAN STATIONER,
WEDNESDAY, January 26, 1881.

THE MONEY MARKET.—The money market continued to work smoothly throughout the week, and borrowers on call on pledge of acceptable collateral found no difficulty in supplying their requirements. Government bond dealers found ready accommodation at 3@4 per cent., the offerings of capital at these rates being occasionally absolutely in excess of the demand. The rate for call loans on pledge of stock collateral ranged from 4 to 6 per cent. In the discount market prime mercantile paper sold at 5@5½ per cent., according to date of maturity. The government bond market was somewhat less active, and was generally firm throughout the week, but the final quotations showed a decline of ⅛ per cent. in 5s registered and 4½s registered, ¼ per cent. in 4½s coupon and 4s coupon, and ½ per cent. in 4s registered; 6s were steady and unchanged. Railroad mortgages were very actively traded in, and were generally strong and higher. Foreign exchange was quiet during the week. In view of present circumstances, it is not unlikely that the market will be firmer, and that higher rates for bills will prevail in the near future. By the old method the posted rates for prime bankers' sterling were 4.80½ and 4.84; the actual rates are 4.80@4.80½ and 4.83¼@4.83¾; cables, 4.84@4.84¼, and prime commercial bills, 4.78½@4.78¾.

THE PAPER MARKET.—The market this week has been quiet, and business has been confined within the limits of the immediate or early wants of consumers, although there are here and there signs of increasing animation, while the prospects of improvement as the season advances are regarded as very promising. The only feature worthy of note is an easier tendency in quotations for super-sized and calendered book paper. The demand for the higher qualities of book paper for some time past has been much smaller than for the lower grades; and as stocks of the former are beginning to show an accumulation, most dealers are disposed to make concessions in prices. We revise our quotation for super-sized and calendered, and now quote 9¾@10½c., and 9@9½c. for extra machine finished. Manilla wrappings are beginning to show more movement, and orders for future delivery have been placed to a considerable extent, within the past fortnight, at full current prices. The local demand for straw wrappings, although not large, is fair, but outside of a moderate trade with Cuba, there is very little export business doing, owing to high prices, the German and English manufacturers supplying the demand from South America and Australia.

THE STATIONERY MARKET.—Although trade in staple goods shows no great activity just now, some of our large jobbing houses report a fair business doing, chiefly to supply the demand from city dealers, and in the filling of moderate orders from country buyers, whose stocks have become very much depleted, and who are only buying now to meet their immediate wants, it being much too early to begin laying in stock for the spring. In the fancy goods branch of the trade the dealers in fans are making an extensive display of these articles, and are receiving goodly orders. The valentine season is now at its height, and a great many new and beautiful designs have been placed upon the market. The dealers in these goods expect to reap a rich harvest this season. The trade, bearing in mind that the last fall season commenced several weeks earlier than usual, have taken time by the forelock, and are making such preparations as will enable them to have goods ready for the spring in ample time to meet the rush when it does set in. No changes in prices have occurred that we know of.

IF YOU WANT THE BEST STYLOGRAPHIC PEN,

The Latest and the Best.

Circulars on application.

☞ Examination Solicited and Satisfaction Guaranteed.

The attention of the Trade is called to the improvements made and advantages offered in Livermore's New Stylographic Pen.

Patented July 15, 1879, and March 9, 1880.

FIRST—**A Smaller Air Tube**, allowing more space for the ink, and rendering the operation of filling easier and less frequent.

SECOND—**The Manner of Fastening the Needle**, not to the air tube, where it would be in danger of being bent or injured every time the pen was filled, but in the point, where it is not so exposed.

THIRD—**The Protection of the Spring** by a silver casing, preventing the ink from clogging its action.

FOURTH—**The Duplex Interchangeable Point Section**, furnishing great facility in cleaning the pen.

FIFTH—**The Ease with which Repairs can be Made.** The needle being in the point, it is not necessary to send the whole pen to the factory, but any dealer can supply a new point.

SIXTH—**Freedom from Legal Difficulties.** The New Stylographic Pen is manufactured under the patent controlling the use of an air tube in a Fountain Pen, and it is therefore free from legal complications.

THE INDEXES OF THE CHURCH OF ROME.

The books generally bearing the title of "Prohibitory and Expurgatory Indexes" are catalogues, as we stated in a previous impression, of authors and works, either condemned *in toto*, or censured and corrected, chiefly by expunction, issuing from the church of modern Rome, and published by authority of her ruling members or societies, so empowered.

The Prohibitory Index, which specifies and prohibits entire authors, or works, whether of known or unknown authors, has been frequently published with successive enlargements up to the present time, under the express sanction of the reigning Pontiff. It may, indeed, be considered as a kind of periodical publication of the Papacy, and no attempt or wish is discoverable to prevent the most extensive publicity, particularly in countries professing the papal faith.

The other class of indexes, the Expurgatory, whether united with the first or not, contains a particular examination of the works occurring in it, and specifies the passages condemned to be expunged or altered. Such a work, in proportion to the number of works embraced by it, must be, and is, voluminous. Publicity is so little desired, that it is the chief thing guarded against. The earliest editions, in particular, were distributed with the utmost caution, and were only intended for the possession and inspection of those to whom they were necessary for the execution of their provisions.

The origin of the genuine Roman Indexes is to be assigned to the formidable attack upon the Papal Church by Martin Luther and others in Germany at the beginning of the sixteenth century.

What it is that the Church of Rome prohibits may be seen from what has occurred in our own country. In 1520, Cardinal Wolsey, in consequence of the brief of Leo X., directed the English bishops to require that all the books and writings of *one* Martin Luther (*cujusdam* M. L.) should be brought in and delivered up to them from all persons whatsoever possessing them, under pain of the greater excommunication. This, it will be seen, was a regular "Boycotting" of Martin Luther as an author, as the prohibition refers to every one of his writings, without enumerating any specific articles. At the same time, that being the period of the Reformation, the writings of numerous Englishmen were condemned *in toto*. Among these Englishmen occur the names of George Joy, Thomas Beacon, William Tyndal, John Frith, Miles Coverdale, William Turner, Robert Barnes, Richard Tracy, John Bale, John Gough and Henry Stalbridge. Belonging to the class of heretics at this period we meet with the names, independently of Martin Luther, of Martin Bucer, Melancthon, Zwingle, John Huss, Calvin and a number of others.

Of all the countries in Europe, perhaps the most zealous and faithful manufactory of condemned books is Spain. Without going into the list of works condemned in that or any other country, we will give the rules by which the Church of Rome is guided in the prohibition of books:

1. All books condemned by the Supreme Pontiffs or General Councils before 1515 to be considered as condemned.

2. The books of heresiarchs are altogether forbidden, whatever may be their names, titles, or subjects.

3. Translations of the Old Testament may be allowed to learned and pious men at the discretion of the bishop; but translations of the New Testament made by heretics are allowed to no

one. Pious and learned men may be permitted to have what is called Vatablus' Bible.

4. Bishops or inquisitors may, by the advice of the priest or confessor, permit the reading of the Bible translated into the vulgar tongue by Catholic writers, to persons whose faith and piety will not be injured by it; and this permission they must have in writing. Without such written permission any one presuming to read or possess it shall not receive absolution until he has first delivered up such Bible to the ordinary. Booksellers disposing of Bibles in the vulgar tongue without such permission shall forfeit the value of the books, and be punished as the bishop shall judge proper. Regulars shall neither read nor purchase such Bibles without a special license from their superiors.

5. Books of which heretics are compilers, as lexicons, concordances, apothegms, similes, and indexes, may with the requisite corrections and emendations be allowed by the bishops.

6. Books of controversy betwixt Catholics and heretics are to be subject to the same regulations as Bibles in the vular tongue. Works in the vulgar tongue, treating of morality, contemplation, confessio', and such subjects, are not to be prohibited if written by Catholics. The same of sermons by Catholics in the vulgar tongue designed for the people. Books hitherto prohibited as containing things not proper to be read by all sorts of persons, may be allowed by the bishop after having corrected them, if written by Catholic authors.

7. Books treating of lascivious or obscene subjects are utterly prohibited, except the works of antiquity written by the heathen; these are permitted to be read, but not by young persons, because of the elegance and propriety of the language.

8. Books, the principal subject of which is good, but in which some things are occasionally introduced tending to heresy and impiety, divination or superstition, may be allowed, after they have been corrected by Catholic divines. The same judgment is also formed of prefaces, summaries, or notes taken from condemned authors and inserted in the works of authors not condemned; but such works must not be printed in future until they have been amended.

9. All books and writings of geomancy, hydromancy, acromancy, pyromancy, onomancy, chiromancy, and necromancy, or which treat of sorceries, poisons, auguries, auspices or magical incantations, are utterly rejected. The bishops shall also diligently guard against any persons reading or keeping any books, treatises or indexes which treat of judicial astrology, or contain presumptuous predictions of the events of future contingencies and fortuitous occurrences, or of those actions which depend upon the will of man. But such opinions and observations of natural things as are written in aid of navigation, agriculture and medicine are permitted.

10. In the printing of books or other writings, the rules shall be observed in the tenth section of the Council of Lateran. Therefore a book printed in Rome is first examined by the Pope's vicar, or master of the Vatican, or persons chosen by the Pope. In other places, the examination of any book or manuscript to be printed shall be referred to the bishop or some skillful person nominated by him. Persons publishing works before they have been examined and approved shall be subject to the same penalties as those who print them, as well as those who read and possess them. Printing offices and booksellers' shops shall be frequently visited by persons deputed for that purpose by the bishop, so that nothing that is prohibited may be printed, kept or sold. Booksellers disposing of any books without the permission of the deputies shall be under pain of forfeiting the books, and being liable to penalties judged proper by the bishop, who shall also punish buyers, readers and printers. Heirs shall make no use of the works of the deceased until they have presented a catalogue of them to the deputies. The bishop may prohibit any book that may seem to be permitted by these rules; and finally, it is enjoined on all the faithful not to keep or read books contrary to these rules or prohibited by the index. —*Paper and Print.*

—THE—

Young Artist Blackboard

AND EASEL COMBINED.

For the Amusement and Education of the Young at Home.

A NOVELTY RECENTLY PATENTED BY THE

N. Y. SILICATE BOOK SLATE COMPANY,

THE PAPER TRADE IN THE CITY OF NEW YORK.

[Continued.]

Perhaps in no one thing can the progress of this country during the last half of a century be better measured than by the history of the stationery trade. Fifty years ago the now commonplace, yet indispensable, envelope was a thing almost, if not entirely, unknown. At the present time, numerous large factories and hundreds of persons are employed in its manufacture, and the product amounts to about 7,000,000 a day, or 2,555,000,000 a year. Still, the envelope is only a single item of the stationer's stock in trade. But it is not singular in this respect. Then, the steel pen was hardly known; now, there are at least a thousand varieties made. In 1830, blotting paper was undreamt of, and its place was filled by sand; in 1881 there are extensive mills exclusively employed in the manufacture of blotting paper. In like manner, diaries, mucilage, and many other articles which constitute important items of the stationery trade of to-day have come into existence during the period considered.

Of course the number of houses in the business has greatly increased in the same time. Probably not more than twelve houses were in the business throughout the city in 1830; now there are several hundred. But few, however, of the houses that were in the stationery business forty years ago are in existence to-day, and only one or two of these retain their original names.

One of these latter is the house of Francis & Loutrel, now at 45 Maiden lane. This house came into existence in 1844 at 77 Maiden lane, but Lewis Francis, who was one of the partners, had started in the business for about two years before. Mr. Francis died in 1877, and Cyrus H. Loutrel, the surviving partner, has carried on the business since under the old firm name.

Mr. Loutrel is a native of New York city. He entered the stationery business while yet a boy, nearly fifty years ago, as a clerk with Edward S. Mesier, who kept in William street, between Wall and Pine streets, and opposite the old "Niblo's Bank Coffee House." It may be remarked in passing that this coffee house, which was quite a noted public resort in its day, was kept by the same man to whom Niblo's Garden owes its origin.

But, notwithstanding his long service in the trade, Mr. Loutrel is, so far as activity of mind and body are concerned, still comparatively a young man. He is a man of very pleasant manners, and is not without a certain sly humor, which peeps out every now and then to give an agreeable turn to conversation.

Francis & Loutrel began as manufacturing stationers; have continued such to the present time, and have always had their own factory. The manufacture of stationery consists principally in making blank books; but some stationers include portfolios, inks and many other articles. Francis & Loutrel in time extended their facilities to include all kinds of printing, and afterward the manufacture of all kinds of writing and copyable printing inks, as well as of a patent composition for printers' inking rollers. A very large item of their business at the present time consists in manufacturing diaries. The factory and store are both in the same building, which is 150 feet deep and six stories high.

During Mr. Loutrel's connection with the business it has changed greatly, not only as regards the character of the stock carried, but also in the manner in which the business is done. Many years ago the system of long credits was followed with hardly an exception; now accounts are

usually collected monthly. A catalogue, issued by Francis & Loutrel about 1850 is a small octavo pamphlet of 24 pages (about the size of an ordinary Sunday school tract), contained a full list of stationery articles of that day. The catalogue of the same firm to-day is at least ten times as large. A leading item in this old catalogue is wafers, which mucilage has since almost entirely supplanted. When people first began to use mucilage they used to buy the gum arabic and prepare the mucilage themselves. Mr. Loutrel says that probably Thaddeus Davids was the man who initiated the manufacture of mucilage in this country. The idea of blotting paper, according to Mr. Loutrel, was derived from the filtering paper used by druggists, and what gave the initiative to its use was the fact that the sand used in drying the ink would work between the leaves of account books and cut them. In this catalogue, too, manifold paper is recommended as affording the easiest means of copying letters. A staple article of stock in the early days of the stationery trade was "ink powder," and for a long time after liquid inks were introduced many persons preferred to buy "Walkden's ink powder" and make their own ink. One more quotation from this quaint old catalogue must suffice. That ancient, yet hardly venerated acquaintance of everybody in general and lawyers' clients in particular, "red tape," is, with a delicate regard for the feelings of those who have had to brook the law's delays, designated therein as "pink tape."

[To be Continued.]

C AND N-W RAILWAY

The Chicago & Northwestern Railway

is the oldest, best constructed, best equipped, and hence the most reliable railway corporation of the West. It is to-day the

Leading Railway of the West and Northwest.

It embraces under one management 2,380 miles of road, and embraces the following Trunk Lines:
"Chicago, Council Bluffs & California Line,"
"Chicago, Sioux City & Yankton Line,"
"Chicago, Clinton, Dubuque & La Crosse Line,"
"Chicago, Freeport & Dubuque Line,"
"Chicago, La Crosse, Winona & Minnesota Line,"
"Chicago, St. Paul & Minneapolis Line,"
"Chicago, Milwaukee & Lake Superior Line,"
"Chicago, Green Bay & Marquette Line."

POLISHING WOOD.

Turned articles must be brought to a fine smooth surface with the finest sand-paper and the direction of the motion should be occasionally reversed so that the fibres which are laid down by rubbing one way may be raised up and cut off. To apply the polish, which is merely a solution of shellac in alcohol, take three or four thicknesses of linen rag and place a few drops of polish in the centre; lay over this a single thickness of linen rag and a drop or two of raw linseed oil over the polish. The rubber is then applied with light friction over the entire surface of the work while revolving in the lathe, never allowing the hand or mandrel to remain still for an instant, so as to spread the varnish as evenly as possible, especially at the commencement, and paying particular attention to the internal angles, so as to prevent either deficiency or excess of varnish at those parts. The oil, in some degree, retards the evaporation of the spirit from the varnish and allows time for the process; it also presents a smooth surface and lessens the friction against the tender gum. When the varnish appears dry, a second, third and even further quantities are applied in the same manner, working, of course, more particularly upon those parts at all slighted in the earlier steps.

Flat surfaces are polished in a similiar manner. The wood must first be *filled*, as it is called, and for this nothing is better than whiting colored so as to resemble the wood and kept dry. Rub the wood with linseed oil and then sprinkle it with whiting. Rub the latter well in, wipe it off carefully and give time to dry. This is far superior to size.

The polisher, however, generally consists of a wad of list rolled spirally, tied with twine and covered with a few thicknesses of linen rag. Apply a little varnish to the middle of the rubber and then inclose the latter in a soft linen rag folded twice. Moisten the face of the linen with a little raw linseed oil applied to the middle of it by means of the finger. Pass the rubber quickly and lightly over the surface of the work in small circular strokes until the varnish becomes nearly dry; charge the rubber with varnish again and repeat the rubbing till three coats are laid on, when a little oil may be applied to the rubber and two more coats given it. Proceed in this way until the varnish has acquired some thickness; then wet the inside of the linen cloth, before applying the varnish, with alcohol and rub quickly, lightly and uniformly the whole surface. Lastly wet the linen cloth with a little oil and alcohol, without varnish, and rub as before till dry. Each coat is to be rubbed until the rag appears dry, and too much varnish must not be put on the rag at one time. Be also very particular to have the rags clean, as the polish depends in a great degree upon keeping everything free from dust and dirt.

IMPROVEMENT IN PHOTO-RELIEF PRINTING.

The English photographic journals report that Mr. Woodbury has lately succeeded in greatly simplifying the beautiful, though delicate and expensive, process that bears his name (Woodburytype). The old process consisted in exposing a tinted gelatine film, sensitized with bichromate, beneath a negative. This gelatine surface, after suitable exposure, having become partially insoluble where the lights of the negative had passed through it, was then washed in lukewarm water, the result of which was an intaglio, or image represented by hollows more or less deep. This mold was then dried and hardened, and placed on the bottom of a shal-

low steel tray, the walls of which were knife edges. A sheet of lead was placed upon the mold, and the whole submitted to powerful hydraulic pressure. The steel knife edges cut through the lead, and the latter was forced to fill up the tray completely. The result was a reverse impression of the mold in the soft lead. This furnished the printing surface. The printing was performed by pouring melted gelatine, colored with suitable pigment, upon the lead matrix, and closing the press, by which the excess of gelatine was pressed out. The resulting gelatine print was then permanently attached to paper or card-board.

Mr. Woodbury's modifications relate to his method of obtaining the matrix. He proceeds as follows: He takes a positive instead of a negative, to begin with, and from this obtains his gelatine mold as before described. This is hardened as before, and attached to the surface of a perfectly smooth plate; when dry, a sheet of tinfoil is placed upon the gelatine mold, and, to force the metal completely into every crevice, the mold and tinfoil are passed through an ordinary rolling press. The gelatine mold thus protected with its metal lining serves now the purpose of the lead matrix of the old method for printing off the Woodbury pictures.

The old method, though it was capable of producing exquisite work, required great skill and delicacy in operating. It required likewise, such costly apparatus that its usefulness was limited. The fact that a hydraulic press, capable of exerting a pressure of from 150 to 500 tons, was necessary, is sufficient to account for the fact that the process has never been generally employed by photographers. Now, Mr. Woodbury dispenses at once with this expensive machinery, and places it within the power of any photographer, who possesses a rolling press and a supply of tinfoil, to prepare photo-relief plates.

It is said that the prints made on this greatly simplified plan are equal in every respect to those furnished by molds in which the lead is solid; and one of the leading English journals, devoted to photography, in a late *résumé* of Mr. Woodbury's work, ventures the opinion that within a year many photographers, or, at all events, those of the first class, will take to producing their pictures by mechanical means instead of by sunlight, and exchange the frame for the press in their printing department.

PATTERNS BY CRYSTALLIZATION.

The curious arabesques produced on window panes by frost have suggested to a French inventor a system of obtaining designs for printed stuffs by crystallization. He has made experiments with the solutions of sulphate of zinc, copper, iron, alumina and magnesia, into which plates of glass were steeped, and then allowed to dry slowly at different temperatures. The crystals thus deposited formed a great variety of fanciful figures—flowers, feathers, stars, etc. These may be fixed by an addition of albumen or gelatine. If copper plates are used, the designs thus obtained may also be made permanent by electrotyping. The great difficulty is to obtain continuous patterns to be reproduced on the cylinders used for printing; but that may be overcome by using cylindrical plates of copper and turning them on their axes while the evaporation is going on. The crystallization is, however, frequently irregular and leaves blank spaces which spoil the harmony of the design, but that defect will probably be overcome by experience. It is not certain that the method has yet been practically employed, but the idea is ingenious, and will probably be eventually turned to account.

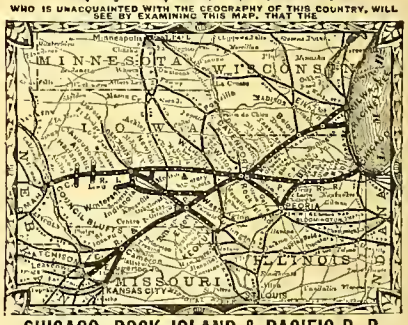
A MAN

WHO IS UNACQUAINTED WITH THE GEOGRAPHY OF THIS COUNTRY, WILL SEE BY EXAMINING THIS MAP, THAT THE



CHICAGO, ROCK ISLAND & PACIFIC R. R.

IS THE GREAT CONNECTING LINK BETWEEN THE EAST & THE WEST

Its main line runs from Chicago to Council Bluffs, passing through Joliet, Ottawa, La Salle, Geneseo, Milton, Rock Island, Davenport, Wilton Junction, Iowa City, Marengo, Brooklyn, Grinnell, and Des Moines, with numerous branches to Streator, Kewanee, Galesburg, Monmouth, Oskaloosa, Knoxville, Winterset, Atlantic, Avoca, Audubon, Harlan, Washington, Fairfield, Eldon, Bethany, Centerville, Princeton, Trenton, Gallatin, Cameron, Leavenworth, Atchison, and Kansas City; Washington to Quincy, Oskaloosa, and Keokuk; Keokuk to Farmington, Bonaparte, Bentonsport, Independence, Clinton, Quincy, Fairfield, Oskaloosa, Pella, Monroe, and Des Moines; Des Moines to Indianola and Winterset; Atlantic to Lewis and Audubon; and Avoca to Harlan. This is positively the only Railroad, which owns and operates a through car from Chicago into the State of Kansas.

Through Express Passenger Trains, with Pullman Palace Cars attached are run each way daily between CHICAGO and PEORIA, KANSAS CITY, COUNCIL BLUFFS, DES MOINES and ATCHISON. Through cars are also run between Milwaukee and Kansas City, via the "Milwaukee and Rock Island Short Line."

The "Iowa Fast Mail" is unexcelled in equipment. Its road bed is simply perfect, and its track is laid with steel rails.

What will please you most will be the pleasure of enjoying your meals, while passing over the beautiful prairies of Illinois and Iowa, in one of our magnificent Dining Cars that accompany all Through Express Trains. Meals are served at moderate rates.

We call special attention to the fact that a majority of the principal railroad systems and railroad companies for different purposes lease the immense passenger business of this line exclusively to us, we are pleased to announce that this Company runs Pullman Palace Sleeping Cars for sleeping purposes, and Palace Dining Cars for eating purposes, and Palace Reclining Chair Cars (Seats Free) on day trains.

THE GREAT THROUGH CAR LINE ARE AS FOLLOWS:

At CHICAGO, with all diverging lines for the East and South.

At LA SALLE, with Ill. Cent. R. R.

At PEORIA, with P. P. J. & D. & B.; L. B. & W.; L. & M.; and T. P. & W. Rds.

At ROCK ISLAND, with "Milwaukee & Rock Island" and "Rock Island & Peo. Rds."

At DAVENPORT, with the Davenport Division C. R. I. & P. R. R.

At WEST LIBERTY, with the R. C. R. & N. R. R.

At HENRY, with Central Iowa R. R.

At DES MOINES, with D. M. & V. D. R. R.

At COUNCIL BLUFFS, with Union Pacific R. R.

At OMAHA, with B. & Mo. R. R. R. (to Nebr.)

At CALHOUN JUNCTION, with B. C. R. & N. R. R.

At OTTUMWA, with Central Iowa R. R.; W. B. L. & P. R. R.; and K. C. R. R.

At EDDYVILLE, with K. C. R. R.

At ST. LOUIS, with Wabash, Pac. R. R.; St. Louis & Peo., and St. L., Kan. C. & N. W. R. Rds.

At ATLANTIC, with St. L., K. C. & N. R. R.

At ATCHISON, with Atch., Topeka & Santa Fe and St. Jo. and Cen. Br. U. P. R. Rds.

At LEAVENWORTH, with Kan. Pac., and Kan. Cen. R. Rds.

At KANSAS CITY, with all lines for the West and South-West.

PULLMAN PALACE CARS are run through to **PEORIA, DES MOINES, COUNCIL BLUFFS, KANSAS CITY, ATCHISON, and LEAVENWORTH.**

Tickets via this Line, known as the "Great Rock Island Route," are sold by all Ticket Agents in the United States and Canada.

BYRON WESTON

DALTON, MASS.,

HAS BEEN AWARDED THE

GRAND PRIZE GOLD MEDAL

AND RECOMMENDED THE

Medal of Honor and Perfection

At PARIS, 1878,

This being the **HIGHEST and ONLY AWARD** given for

LINEN RECORD and LEDGER PAPER.

—A SPECIALTY.—

THIS Paper has received THE HIGHEST PREMIUM over all others from *the Cincinnati Industrial Exhibition*, *Massachusetts Charitable Mechanics' Association*, *Franklin Institute* of Philadelphia, Louisville Exposition, Medal and diploma from *United States Centennial Commission*, *Medal of Progress American Institute*, *1877*, *and Medal of Improvement and Progress*, *Boston*, *1878*. Its

PRINCIPAL ADVANTAGES

are as follows:—1. It contains more LINEN than any other Ledger Paper, has a longer fibre, and is, consequently, tougher. 2. Having a harder and better body, it frays less in erasure, so that by simply using the rubber after the eraser, the ink is prevented from spreading. 3. It is more uniform in Weight Color and Finish. 4. It never cockles if properly bound. 5. Its chemical action upon ink is such that it both writes and rules up better. For proof of the foregoing, refer to a large number of Stationers, Bookbinders, Bookkeepers, and Recorders, who have given it, after a severe test, the preference over all others. This paper is *Double Sized*, and will stand any climate or the most acid of fluid inks.

Send for sample sheet, ERASE and REWRITE FOUR TIMES on same spot.
Each sheet is water-marked with name and date.

"The Stationer"—Every Thursday—$2.00 Per Annum.

VOL. IX.---NO. 5. NEW YORK, FEBRUARY 3, 1881. WHOLE NO. 293.

Correspondence.

PHILADELPHIA NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

PHILADELPHIA, Pa., February 2, 1881.

The suspension of P. Fleischner & Co., of Philadelphia, when it took place, caused considerable astonishment here, and people could not understand why this failure should happen in the middle of December—that is, exactly in the most fruitful season of the year. The friends of Mr. Fleischner were anxious that the matter should be disposed of, and from this point of view the report of the Board of Trade, made on the 24th of January, has been quite satisfactory to them, in that it declared that the circumstances which led to the failure were beyond the control of Mr. Fleischner. A large majority of the people here would be well satisfied if the proposition of Mr. Pulaski (as reported in THE AMERICAN STATIONER of the 27th January) could be accepted by the creditors.

The remarks of the Board of Trade's report on Langfeld, Turner & Andrews' connection with this suspension are not regarded as just by the trade in this city. The facts, as near as your correspondent has been able to find out, are as follows: Fleischner & Co. owed Langfeld, Turner & Andrews about $1,200 on their old account. They desired additional credit, and, before giving it, Langfeld, Turner & Andrews required the debtors to give them a judgment for the two accounts, making about $2,500 in all. Other judgments had been given H. M. Rosenbaum, and when the latter firm began to enforce its claim, Langfeld, Turner & Andrews were obliged to follow suit to protect their interests. Half an hour was sufficent for your correspondent to obtain this information, which was equally accessible to the Board of Trade, and which, had it made a more careful examination, would have avoided using a phrase which is considered an unjust reflection on a well known and highly esteemed house.

Thos. S. Dando & Co. are considerably put out on account of the manner in which Oliver Braden was treated by the tax office during his last visit to Washington, of which your correspondent has given you an account. About eighteen months ago one of the travelers for Amos R. Little & Co., wholesale dry goods merchants, of this city, was arrested in Baltimore under similar circumstances. Little & Co. instituted an action against the license office and gained the case. Since which time travelers have not been troubled in the State of Maryland. Let us hope that the Board of Trade will take up this Braden matter, as no doubt a similar result could be accomplished in the District of Columbia.

George McDowell & Co. have been in possession since the first of the year of their new wareroom, No. 20 South Sixth street, which is one of the largest we have, being 22 feet front and 200 feet deep. A person not acquainted with the business can hardly imagine the amount of work which is involved in packing, moving, classifying and marking the different kinds of goods which are embraced in the stock of a wholesale stationer, and I congratulate Messrs. McDowell that they are done with the task. The tables of samples which occupy that part of the store which is nearest the light are arranged so as to present a complete assortment of each line of goods in stock, which enables customers to choose what they need with great facility. The stock of goods arranged on the shelves, which run the entire length of the store, indicates that the firm expects a large business during the coming season. J. VIENNOT.

BOSTON NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

BOSTON, Mass., February 1, 1881.

Since my last letter the weather has been decidedly averse to trade; but with a thaw or let up on the part of the chap who has control of the Manitoba machine, our stationers expect a good trade. Business, however, for the season of the year is reported "fair to middling," especially in staple goods.

Agents of New York leading houses, of whom there have been quite a number in town during the past week, report a good feeling prevalent all aronnd, especially in Boston, they having taken a considerable number of orders as the result of their calls. A few novelties have made their appearances; but there is no disposition to stock up much at present only in prime articles adapted to the season and such as will meet with a ready sale.

The railroad blockades in northern New England during the week—the worst known in the past twenty years—coupled with the extreme cold weather, has interfered with the jobbing business. But time sets all things right; stationers' clerks will again be busy in the packing department.

The continued low water in some of the New England streams is interfering somewhat seriously with the paper supply, quite a number of mills having been compelled to suspend operations altogether. A season of mild weather is anxiously looked for. But it is possible manufacturers may get more water than they want; for a sudden thaw would set the rivers a-booming, on account of the vast quantity of snow, and perhaps mills and all may go down stream.

Dealers in paper material anticipate no disturbing changes in prices for some time to come, and hence manufacturers feel quite at ease with reference to their future supplies.

The valeutine season has fairly broken out in the shop windows, and the specimens are a great improvement upon those of past years. The business here, however, has been on the wane during the past few years.

Prang's Easter cards are attracting much attention, especially the later designs, which certainly surpass anything of the kind yet offered to the public.

Bufford's Sons' latest cards, business and otherwise, are meeting with a big run, especially from the West, where the work of this enterprising firm is fairly appreciated, as it also is at the East.

Amoug the book publishers, Lee & Shepard, Estes & Lauriet, J. R. Osgood & Co., and Houghton, Mifflin & Co. report a steady demand for standard works. Each one of these houses also announces lists of new timely publications.

L.

MICHIGAN NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

DETROIT, Mich., January 31, 1881.

Just to break up the notion that there is a dull season just at present, I am informed that many houses are getting good prices for their goods and novelties, and the valentine display is only just being advertised by the stationers.

The cards of L. Prang & Co. and De La Rue & Co. find much favor in the leading stores, notably those with silk fringe; also the small fans. Stationers are busy arranging their high priced valentines of which they desire to make a specialty in glass showcases to catch the eye of customers. One firm advertises its valeutines from every principal city and country, at home and abroad.

C. W. Jenks, the well known representative of Langfeld, Turner & Andrews, of Philadelphia, has been in town distributing his pocketbook card. Although several jobbing houses were busy taking stock, the buyers never miss a chance to call and see his samples, and appreciate something new which his factory always gets out for him. His plush ladies' bags and satchels are having large sales in every direction, and the firm purposes, it is said, to increase its facilities for the manufacture of these last

named goods on a much more extensive plan to meet the increased demand.

The Court of Queen's Bench at Montreal, P. Q., has given a judgment which virtually asserts that the Americon edition of the Encyclopædia Britannica may be imported and sold in Canada. Referring to the success here and abroad of Mark Twain's last new book, "A Tramp Abroad," the Canadians have not failed on this occasion to add their contribution to the cumulative argument in favor of international copyright. It has been said that they managed to get advance sheets from the steam press at Hartford (Twain's own town) and to have been in the market with their book almost as soon as the American Publishing Company. It is argued in behalf of international copyright that the practice of stealing all publications not protected, and issuing them in cheap form, is not only dishonest, but is cheapening the brain work of authors. Our publishers who pay good prices (and there are several) cannot compete with those who steal their works.

Charles Shumway, who has for the past nine years been a salesman with the firm of E. B. Smith & Co., now Thorndike Nourse, of Detroit, has resigned, in order to fill a similar position in the wholesale department with a New York house. Prior to his departure last Saturday, his friends in the employ of Mr. Nourse presented him with a handsome diamond shirt-pin. He leaves many friends in Detroit, where he was respected, and he must be a valuable acquisition to any firm. Mr. Shumway is the second salesman that has severed his connection from this house to enter the employ of the same firm.

Frizelle & Co., the druggists, in this city, who assigned to R. L. Polk, have filed a schedule of assets and liabilities in the county clerk's office. Assets, $3,449.44; liabilities, $8,564.08.

The Rev. S. W. Sample has ceased to be the editor of the Grand Haven *Herald*. H. G. Nichols, formerly foreman on the paper, has purchased an interest in the paper and becomes its editor.

A rumor has got abroad among the trade, and may be news to some persons outside of Detroit, that another change in one of our book and stationery stores may be looked for this spring.

L. D. Butterfield, of the Detroit Paper Company, who went to Jacksonville, Fla., recently, returned last week.

Thorndike Nourse has gone East.

Representatives of New York houses have stirred us up lively this week, and also a visitor from THE AMERICAN STATIONER office in Chicago, Edward E. Park. This gentleman called on your correspondent on his arrival, and at his departure from our city stated that he had obtained several advertisements for your *Paper Trade Journal* and the *American Mail and Export Journal*.

C. N. Graves, with Jas. D. Whitmore & Co., New York, has had something very pretty in satin hand-painted cards, for guests, menu dinner cards, programme cards, with silk fringe borders, and new styles of note papers.

Among those whom I find registered on the books and at the hotels are Mr. Bushnell, of Pierce & Bushnell; J. H. Gillett, with J. Q. Preble & Co.; Frank Johnson, with Nagle & Co., Philadelphia; Mr. Meeks, with E. Claxton & Co., Philadelphia; B. E. Pike, with M. A. Reay & Co., New York; Mr. Ayres, with E. & H. T. Anthony, New York; C. H. Beck, with C. F. Rumpp, of Philadelphia; R. Cockcroft, with Chas. T. Bainbridge's Sons, New York; the inseparables, Raisbeck and Van Horn, and Harry C. Gibbs, from Willy Wallach, of New York.

While New York and other cities are visited with heavy storms and prostration of wires, we do not experience any interruption to business in this Western section, although recently considerable snow has fallen.

J. H. Jordan, agent for Frederick Keppell, of London and New York, is exhibiting some rare engravings and etchings. In place of the inferior productions so often seen in our stores, we now have the famous pictures of the old masters. Mr. Jordan will visit the principal cities in Michigan before returning East through Ohio. Some engravings are very costly; still sales have been very good. CITY OF THE STRAITS.

GEORGIA NOTES.

[CORRESPONDENCE OF THE STATIONER.]

ATLANTA, Ga., January 22, 1881.

In the words of General Joe Brown, one of the ablest men in all the South, "The world moves, and we must move with it." Labor is wealth. That is the policy of the South to-day and the old ruling classes have become workers. The South financially is growing stronger with every cotton crop. With this increase in wealth, comes increase of education, and there is a growing demand for solid literature. This brings me to devote a few words to the condition of the book and stationery trade of this city.

The year just closed has been one of changes. T. B. Hancock has moved from his old store to his new and spacious quarters on Alabama street. He reports having done a very good business in staple goods.

Two new firms have made their appearance, namely, Campbell, Davenport & Cook, and Lovejoy & Pitchford. The former was changed to Campbell & Cook last September, by the retirement of Mr. Davenport. Its members are young men endeavoring to do a jobbing business, on a rather limited capital. Their energy may bring success. They report having done a very fair holiday business, having few expensive goods on their hands.

The latter new firm, Lovejoy & Pitchford commenced business last February, on a very limited scale. Mr. Lovejoy had been clerk with a house of good standing in this city for a number of years, and Mr. Pitchford had been clerk for three years with Phillips & Crew in the book and stationery business. Both are young men unmarried, living with their parents, and the expenses beyond their store rent, being merely nominal, they are, to quote the words of a prominent merchant of this city, bound to succeed. Their capital has grown fourfold during their eleven months business career. They report having done a very large holiday business, quite as large as any in this city.

Phillips & Crew, the largest dealers in the city, and carrying the most extensive stock, told me they had not done as well as usual, as the trade had been more cut up by the addition of the above mentioned new houses. They report having quite a stock of holiday goods left on their hands.

Lynch & Thornton—the firm that always discounts for cash—report a fine holiday business, never better, and have sold all their holiday goods; are now buying for spring trade, and told me business during the month of January, this year, had beeu better compared with same time last year.

J. J. & S. P. Richards, jobbers and retailers, report fair business. They do mainly a staple stationery and school book business, this and their holiday trade they report as satisfactory.

From all of the above mentioned firms I hear satisfactory reports as regards the sale of Marcus Ward and Hildesheimer & Co's. Christmas and New Year cards; the sale of these fine goods has been very large. The much talked of prize cards of Prang's, did not satisfy expectations.

With the exception of Lynch & Thornton, all are dissatisfied with January business, the rain for the last month having kept the ladies at home, the country people from the city, and mede money scarce. The stock of publications, especially juveniles, on hand is quite large, much larger than usual; and as the demand for these goods, with the exception at holiday times, is very limited, I am afraid orders for next fall will be somewhat curtailed. With the arrival of better weather better times are expected. NOVICE.

SOUTH CAROLINA NOTES.

[CORRESPONDENCE OF THE STATIONER.]

CHARLESTON, S. C., January 29, 1881.

"To be or not to be; that's the question." Thus said Denmark's crazy scion; but whether J. Samuel Bee "is to be," as likewise J. M. Greer and B. F. Neufville, that is the question as interesting to the book and stationery trade. I may be able to give some few facts regarding the above not generally known to the readers of THE STATIONER, and I hope they will receive the sympathy they deserve. According to figures furnished me by Colonel Walker, of Walker, Evans and Coggswell, who has been appointed by the creditors to manage the disposal of the stock to the best possible advantage, Mr. Bee's liabilities are about $4,350; the stock, at actual cost, is worth about $5,700; accounts good, about $400; do., doubtful, $200, and bad $200. Colonel Walker's opinion was that about 50 cents on the dollar might be realized; but, as I take a different view of the case, in my opinion 75 to 80 cents will be nearer the figure. The stock was advertised to be sold in Wednesday's paper, and the day following brought a rush of seekers after bargains and some few shoppers. Receipts were satisfactory considering the circumstances, and everything sold that day was disposed of at 20 per cent. advance above cost. Mr. Bee has considerable old stock, which has been accumulating for some time, and on which a mere nothing will be realized. That he is honest no one need doubt. His wife loaned him $1,500 to invest in the business. He might have assigned, giving preferences to that amount, but he has not done so. He intends quitting the business, but admitted to me that if he had known of the dilemma in which Mr. Greer was placed he should not have made an assignment but would have asked for an extension, which he says he could have obtained. He had a good holiday business. You may ask what has become of the money. I asked that question. He showed me by his cash book that he had paid the notes of Willy Wallach, Baker, Pratt & Co., and others, which he gave when he asked for an extension last spring. He has shared the same fate as Fogerty.

A few words as to Mr. Greer's case. He made an assignment for the benefit of his creditors, and his son Robert Greer was appointed assignee. A meeting of the creditors will take place to-day. I gleaned from him the following facts: Stock valued at $5,200; liabilities, including the amount of Mr. Laidler, $2,500, are $6,455. The stock was taken at list, and a reduction of 20 per cent. made. The old stock was not included in this valuation. There is a preference of $160 to Baker, Pratt & Co. for goods received the day after the notes went to protest, and which is considered just and fair.

J. M. Greer is one of the oldest book men in the United States, having passed sixty years of

his life in that business, entering as office boy at the age of 13. At the ripe old age of 73 he is penniless. Some years ago he mortgaged his house for $5,000 to the South Carolina Loan and Trust Company, paying 10 per cent. interest per annum. The company has seized the house, and it is advertised at auction. Mr. Laidler backed him with cash, and in consideration all receipts of the business were deposited by Mr. Laidler where he banked. The holiday trade of 1879 was good, and everything looked encouraging for 1880, so he bought a thousand dollars' worth more than the year previous. The anticipations were not realized, business was not as good, and that left a certain amount to be raised. Mr. Laidler was again applied to; but he replied he could not furnish any more. Then certain New York crediters were requested to grant an extension, which they refused to do. The result you have already heard. The money in the bank and deposited by Mr. Laidler was kept by him to indemnify him partly for advances made, thus leaving Mr. Greer with a very small balance of cash on hand. R. Greer has been doing the buying during the past year, and the salary received by him and the living expenses of J. M. Greer combined have not exceeded $1,500 per year, showing economy in household matters. I know his misfortune will receive sympathy from many old friends in the book trade. How much will be realized by the sale of the goods it is difficult to conjecture, but I think not much.

Walker, Evans & Coggswell reported business as fair.

At Edward Perry's I found business good. Holiday business was fine, he having duplicated a number of his orders and having little or no stock left to carry over. His drummer was preparing to take the road again, having returned a week ago from a successful trip among the small towns. Everything was animation and bustle, and the place reminded one of a New York house in the busy season. I had a peep at last month's trial balance, after taking stock, showing stock, fixtures and bills receivable, about $43,000; payable, $7,300. This is the man whom a certain New York house refused credit a year ago. It is very likely he will branch out into the book trade this coming fall, as the closing of Greer and Bee leaves Charleston without a book store, unless one takes into consideration Righter's bazaar, a place *à la* Macy, only on a very diminutive scale. There is an opening in this city for one first-class book store. Some one must supply the rising generation with educational matter, and I have heard some rumors; but *nous verrons*.

BLACKBOARD.

OUR LONDON LETTER.

[FROM OUR REGULAR CORRESPONDENT.]

5 LUDGATE CIRCUS BUILDINGS,
LONDON, E. C., January 15, 1881.

The disturbed condition of our political atmosphere is somewhat inclined to stifle business and all other topics of a less engrossing nature. Many of our wholesale firms report, however, very good business. We have had many good and useful things this year from enterprising firms. I will try to name a few.

The most *récherché* novelties this past season have been, without question, the ivory hand-painted cards of John Walker & Co., a firm who have specially distinguished themselves in all ways.

Chas. Goodall & Son have held their own distinctly in playing cards, and their show at the Trade Exhibition at the Agricultural Hall last July will not soon be forgotten by those who saw it. This firm have also perfected a special kind of lithographic paper, which is almost indispensable to high class work. Chas. Goodall & Son have also introduced many steel plate cards of original design and application, and their work has been pronounced by the trade to be exceedingly good. There is no doubt that for effective, yet high, artistic work, the Camden Town firm will always be an honor to our progress and advancement.

Hand-painted goods are very popular, and not only are paper, leather and ivory utilized for the delineation of design, but I saw very late in the season some pretty designs on plain deal mounts. The pieces of wood were selected free from knots, of course, and resin marks. I think this kind of thing might be developed considerably. A handsome hand painting upon a thin slab of ebony, walnut or black oak would look rich and effective. Mr. Mackay, of Bristol, has utilized thin films of gelatine for gold designs and hand-painted cards, and they are very good indeed.

Seasonable cards, *i. e.*, Christmas, New Year, Easter, and birthday, have been sadly overdone in my opinion. Buyers are too rash, and the amount of stock left unsold must be something awful. Then the draper's trade is a scandal to the trade. What business has a draper to sell Christmas cards? Of course, England is one of those everlasting and sickening nebulosities known as a "free country," where everybody can do as he pleases—shirking taxes excepted. Free trade is now, here, throat-cutting competition of the most unscrupulous character. The wholesale stationer supplies the draper with cards, well knowing that they are to be sold against his own legitimate customers at prices which render fair competition impossible. This is not true business. Another first class firm is Thomas De La Rue & Co., whose name and goods are well known on your side. They not only execute—I think I may say so without offending any one—the most delicate work, but they have the happy knack of always hitting upon a success. But calendars and diaries have been, I may say, for some time, and are still, quite the specialty of the Bunhill row firm, who devote all the enterprise and skill of their establishment to produce the various forms of diaries in as perfect a form as possible.

In addition to being a record of time, a compendium of dates, these diaries and calendars combine a great quantity of useful information of constant and valuable application in the offices of all business men.

The calendars and diaries for 1881 are issued by De La Rue & Co. in all sizes and forms, some being suitable in neat leather and silver cases, for the pocket. Others larger and more general in contents will befit the note book, while ladies will be able to find useful companions in the neatly bound and clasped pocketbooks, wherein, in addition to information upon general everyday business, they will find room for personal notes and little accounts, provision for which is ample in all senses.

Another enterprising house is Geo. Waterston & Sons, whose sealing wax is well known in the United States. Not only sealing wax, however, but all the numerous articles which are comprised under the heading of stationery, are provided by this firm. They produce capital school stationery, good inks, copying presses, &c. They are also the agents for Stone's well known cabinets and boxes for the filing and methodical arrangement of papers, &c. J. S. Downing, of Birmingham, whose goods are to be seen in every stationer's window in this country, has turned out some good things this year, and Geo. Waterston & Sons are his London agents also.

There have been lots of push in the paper and envelope trade, too, during the past year. We have some good old firms here, who are always alive to the exigencies of the hour. Spalding & Hodge, Grosvenor, Chater & Co., John Dickinson & Co., Wiggins, Tempe & Co. are splendid names in our trade, and they can each and all supply any kind of paper. Your readers are well acquainted with Spalding & Hodge and Grosvenor, Chater & Co., and I hope our other larger firms will recognize THE AMERICAN STATIONER as the unequaled medium of advertising and making their goods known all over the world.

I hope, in mentioning our firms who deserve support for genuine and original enterprise, I may never omit John Heath, of Birmingham, whose genial presence and upright character are always remembrances of pleasure and gratification. Mr. Heath has considerably extended his premises this past year, and is preparing for a vigorous campaign in all the lines of goods for which he is famous. One thing about Mr. Heath's goods is noticeable—they are a model of neat arrangement. He always consults his customer and his customer's shop window or counter. Half of the battle is won by presenting goods in an acceptable form to the public. This, John Heath has certainly done, and I hope he may, having sown good seed, reap an abundant harvest.

Of course, I cannot mention every body in this letter, so I trust all who have been omitted and who think they are ill used, will not be offended.

In the current number of *Belgravia* is an article with the heading, "Does Writing Pay?" in which the old and vexed question, "Author *v.* Publisher," again crops up. It is not difficult to detect the authorship, as the writer has had considerable experience among publishers. Alluding to the system of "sharing"—that is, author and publisher dividing alike when there is a profit—the writer relates an interesting incident, that should be a lesson to other publishers. The transaction was with a "worthy publisher of Catherine street, an old friend and encourager, who honestly and faithfully divided the profits, and, on a not very successful work, handed me some eighty pounds as my share. I may add that with this excellent man I have never had a scrap of writing in the shape of an agreement. His word and mine were sufficient."

The *Antiquary* commences a new volume this month, Austin Dobson furnishing a poetical prologue which pleasantly introduces the contents. Cornelius Nicholson gives an account of the Roman Villa near Brading. W. Blades contributes an account of the first printing press at Oxford, and in doing so clears away some misapprehensions which have long been afloat on the subject. Mr. Hill's account of an archæological tour in Norfolk will be read by many with interest. Dr. Lithgow continues his remarks on the orthography of Shakespeare's name, and other papers of an appropriate character help to make up a good number.

The Jews of London have recognized the services of the late George Eliot to the Hebrew race by offering prayers for the repose of her soul.

Under the title of "Our Newspapers" Metzler & Co. have issued a capital drawing-room song, by Julien Martin, who in a humorous fashion has pleasantly summarized the contents of our daily and weekly journals.

William Pritchard, of 68 Tooley street, Southwark, has joined The Makers of Playing Cards' Company.

(*Other Correspondence See Page 140.*)

OLD BERKSHIRE MILLS

DALTON, MASS., U. S. A.

One party writes: 'The two hundred RECORD BOOKS, for 83 of the 99 Counties, now on exhibition at the Iowa State Fair, at Des Moines; and all, but four (!) of them, made from your 'OLD BERKSHIRE MILLS LINEN LEDGER,' Medium, 40lb., make a splendid show."

[The above cut is a fac-simile of the wrapper used on the Linen Ledger Paper.]

We will pay for any book rejected on account of fault in the paper. Send for Samples, test them in comparison, and see that your books are made from paper thus water-marked.

OLD BERKSHIRE MILLS

LINEN LEDGER PAPER

Will stand the severest test of COLOR, CLIMATE, INK OR WEAR.

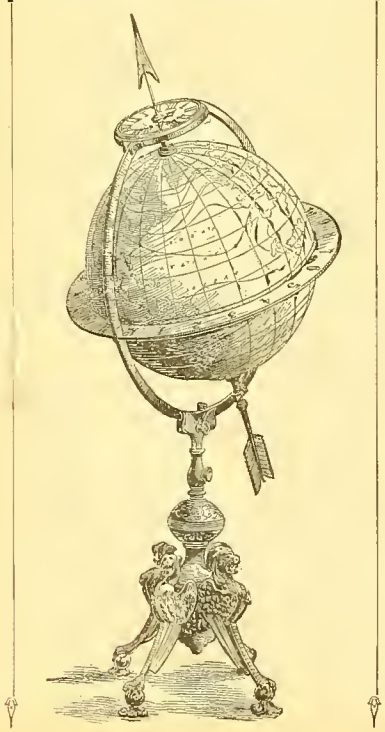
Being **Triple Sized** (a process entirely our own) and **Loft Dried**, can be erased and written upon the fifth time distinctly. None genuine without the water-mark and date, thus—**Old Berkshire Mills Linen Ledger, 1880.**

CARSON & BROWN CO., Manufacturers.

CANAJOHARIE, N. Y. — JUVET & CO., — CANAJOHARIE, N. Y.

—MANUFACTURERS OF—

Time Globes, Relative Time Globes, Tellurians, Celestial,



AND VARIOUS FORMS OF TERRESTRIAL GLOBES.

The **Time Globe**—see illustration—is not only a perfect geographical globe, but is also a time piece, each part working independent of the other and perfect in both. By means of internal mechanism the Globe is made to revolve once in twenty-four hours—as does the earth. **Universal Time** is obtained **without computation.** It is a **Stem Winder, regulates** from the **outside,** and runs four days without rewinding. Sizes, 6, 12, 18 and 30 inches. Prices $75 to $600, according to size and style of mounting.

The **Relative Time Globe,** while capable of performing **all** the problems of the ordinary **Globe,** gives in addition **Universal Time without computation.** Sizes, 6, 12, 18 and 30 inches, Prices, $35 to $300, according to size and style of mounting.

Tellurians, Celestial and **Terrestrial Globes,** so mounted (new designs) that no part of the map is hidden from view. Sizes, 6, 12, 18 and 30 inches. Prices, $3 to $250.

Above described Globes are **all** made of a new material, which, unlike the old plaster and clay Globes, will not fracture; in fact the shell is so strong and well made that it will be economy to recover in case of geographical changes or injury to the map.

All full Meridian Ring Globes are mounted with swiveled clutch, which allows them to be placed at any desired angle. None but the latest and most perfect maps used.

Meridian Rings are of **Brass,** and **carefully** graduated.

ALL ORDERS WILL RECEIVE PROMPT AND CAREFUL ATTENTION.

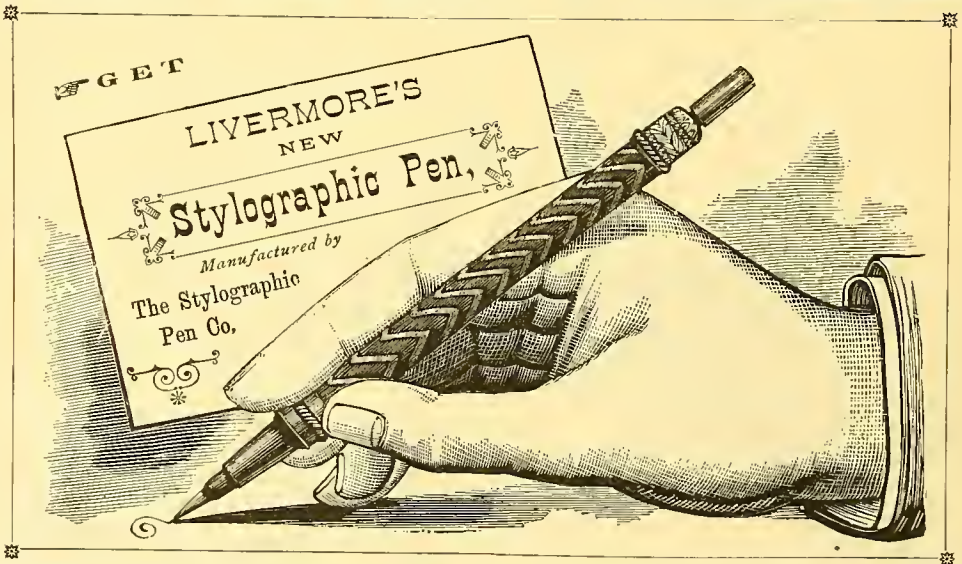
Nos. 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20 and 50. **Elastic Rings.**

P. O. Box 1337. Z. DELANO, Boston, Mass.

IF YOU WANT THE BEST STYLOGRAPHIC PEN,

The Latest and the Best.

Circulars on application.



Examination Solicited and Satisfaction Guaranteed.

The attention of the Trade is called to the improvements made and advantages offered in Livermore's New Stylographic Pen.

Patented July 15, 1879, and March 9, 1880.

FIRST—**A Smaller Air Tube,** allowing more space for the ink, and rendering the operation of filling easier and less frequent.

SECOND—**The Manner of Fastening the Needle,** not to the air tube, where it would be in danger of being bent or injured every time the pen was filled, but in the point, where it is not so exposed.

THIRD—**The Protection of the Spring** by a silver casing, preventing the ink from clogging its action.

FOURTH—**The Duplex Interchangeable Point Section,** furnishing great facility in cleaning the pen.

FIFTH—**The Ease with which Repairs can be Made.** The needle being in the point, it is not necessary to send the whole pen to the factory, but any dealer can supply a new point.

SIXTH—**Freedom from Legal Difficulties.** The New Stylographic Pen is manufactured under the patent controlling the use of an air tube in a Fountain Pen, and it is therefore free from legal complications.

L. PRANG & CO.'S

Valentines for 1881.

We take pleasure in herewith presenting to the trade our Price List of Valentines for this Season:

ASSORTMENT.—Our Valentines are made up in sets of one dozen, except Series 1, where six constitute a set, and are put up in a box or envelope. Each set contains all the designs of the series; and as no series has more than six designs, each design is more or less repeated in the set.

ENVELOPES.—Fine Cream-Tinted Envelopes are furnished with every series, except Nos. 9, 11, 15, 16, 17, without extra charge.

VALENTINES WITH SILK FRINGES.—We would call especial attention to these, as they will doubtless prove very attractive. These goods are made up with the best quality heavy silk fringe, made expressly for us. All fringed Valentines are furnished with protectors and envelopes, and are put up with assorted colors of fringes.

LIST OF PRANG'S VALENTINES FOR 1881.

No. of Series.	No. of Designs.	DESCRIPTION.	HOW PUT UP.	Retail Price per Set.

BOSTON, MASS.

Trade Novelties.

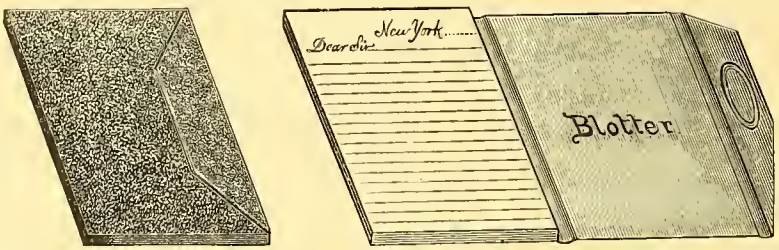
[We will be glad to receive samples of all novelties issued in the trade, and will notice all such which possess merit free of charge. It is desirable to accompany descriptions with cuts whenever possible.]

BACKBOARD CUTTER.

The accompanying cut represents Langham's Patent Backboard Cutter, which is an instrument recently devised for cutting backs for photograph frames. By this invention a great deal of time is saved, as the operation was previously performed by means of a saw. An important feature in the new instrument is the application of a scale and gauge, which may be quickly adjusted for boards of any ordinary width. The machine cuts equally well either with or against the grain, and there is absolutely nothing to get out of order. E. & H. T. Anthony & Co. are the sole agents.

PORTFOLIO TABLET.

A new thing in writing tablets is illustrated in the engraving. This is a new method of putting up fine white writing papers for general use. The tablet comes in eight sizes, the paper being neatly bound in portfolio style, with a sheet of blotting paper attached to the cover, as represented. This seems to be a neat and very convenient form of writing tablet, and as such is likely to be in demand. It is manufactured by the Acme Stationery and Paper Company, No. 117 Fulton street, New York.



(Closed.) PORTFOLIO TABLET. (Open for use.)

NEW PATENTS.

No. 236,459. Paper Bag.—Marcus C. Ruthenburg, Cincinnati, Ohio.

A paper bag having a seamless bellows fold bottom and two side seams, each of which has three thicknesses of the material, the inner two being composed of the folded edge of one side of the bag, and the outer thickness being composed of the edge of the other side of the bag and overlapping the middle thickness, so as to be pasted to the body of the bag. 2. The method or process of constructing a seamless bottom bag by first forming a longitudinal bellows fold on the web as it comes from the roll, then severing the same, while distended, into bag widths by an oblique cut, and finally folding both the edges at each side at a line within the inner edge and pasting them both to the body of the bag.

No. 236,461. Tag Machine.—Joseph H. Shearn, Leeds, Mass.

A strip of paper is fed forward by a roll over a vertically reciprocating cutter, which cuts out the tags and at the same time punches the hole for the string. The tag thus cut is taken by a clamp and carried under the needle, which introduces the string through the hole. The string is then cut, and the ends are united by knot-tying devices, after which the tags are strung upon a rod.

No. 236,537. Game of Pin Pool.—Thomas H. Bradley, Washington, D. C.

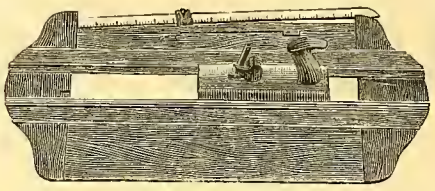
No. 236,565. Inking Apparatus for Printing Machines.—Robert Engels, Philadelphia, Pa.

No. 236,599. Toy Cap Exploder.—Louis Kyser and Alfred C. Rex, Philadelphia, Pa.—Filed June 2, 1880. (No model.)

No. 236,602. Account Book.—William C. Lovell, New York, N. Y.

In a combined pocket cash and bill book, bill pages, with perforations and coupon at the base, arranged in alphabetical sections, each provided with a flap cover, and the whole with a stiff sectional folding back.

No. 236,610. Map Case.—Hiram E. Moon, Richmond, Ind.



BACKBOARD CUTTER.

No. 236,630. Couvertible Chair and Hammock.—Samuel R. Robinson, Antrim, N. H.

No. 236,633. Paper Bag Machine.—Marcus C. Ruthenburg, Cincinnati, Ohio.

No. 236,654. Wall Paper Exhibitor.—Francis Van Duzer, Havana, N. Y.

No. 236,667. Picture Frame.—Charles A. Brainerd, Chicago, Ill.

No. 236,685. Book Rest.—Albert P. Massey, Cleveland, Ohio.

A book rest having two leaves inclined at an angle to each other and pivoted upon an axis inclined in regard to the book rest, and projecting from the line of junction of said leaves.

No. 236,691. Toy.—Edwin R. Parsil, Newark, N. J.

No. 236,742. Hand Stamp.—Walter D. Wesson, Providence, R. I.

No. 236,768. Type Case.—James Breakey, Brooklyn, assignor to Alden Type-Machine Company, New York, N. Y.

No. 236,787. Card and Sample Holder.—Francis L. Cutter, Brooklyn, N. Y.

No. 236,797. Device for Securing Forms on the Beds of Printing Presses.—William Gast, New York, N. Y.

No. 236,826. Bulletin Board.—Albert D. Marble, Scandia, Kan.

A bulletin board consisting of a rectangular box provided with a series of horizontal compartments, into which are adapted to fit a series of cubical blocks with the necessary blank, lettered or figured faces, the compartments being provided with springs at one end and set screws at the other, whereby the blocks are confined by adjustable spring pressure, so that they may readily be removed and changed.

No. 236,845. Picture Stand.—George Schenrich, New York, N. Y.

No. 236,861. Hotel Register.—Eli M. Tree, Kingston, Ontario, Canada.

No. 236,865. Picture Book.—John H. Walker, Waterbury, Conn.

No. 236,877. Stylographic Fountain Pen.—Charles H. Downes, Jersey City, N. J.

No. 236,902. Apparatus for Blacking Borders of Cards.—Hugh A. McAfee, Brooklyn, assignor to Tiffany & Co., New York, N. Y.

The combination of two parallel bars, each bar containing a series of pins, with a third parallel bar, the latter connected with the moving bar of the two parallel bars by means of arms, and containing shots and guide pins.

No. 236,951. Paper Bag Machine.—Henry A. House, Bridgeport, Conn., assignor to the Union Paper Bag Machine Company, Philadelphia, Pa.

An ordinary bellows-sided tube is severed so as to leave one ply projecting beyond the other. This projecting ply or lip is folded over and pasted down upon the shorter ply. A bag thus formed is placed between guides and carried by the belts downward until its lower corners rest upon and in the depressions of fold-guides. Folders then descend, and, entering the bellows sides of the bag, force it downward over the fold-guides, thus turning the corners of the bag inward and making triangular folds in its bottom. The bag is then discharged from the machine by rolls.

No. 236,953. Picture Frame Easel and Back Rest.—Chas. E. Kellogg, Elmwood, Conn.

No. 236,960. Postage Stamp.—Reese P. Sawyers, St. Louis, Mo., assignor of one-fourth to Robert R. Hutchinson, same place.

A postage, revenue, or other adhesive stamp, the adhesive substance of which is applied upon an irregular portion of the back, so that the inner margin of the gum or other adhesive substance will present a wave-like, irregular line on a different line relative to the gum on the other stamps of a sheet.

No. 236,983. Tag.—Allison N. Clark, Plainville, Conn.

A tag formed on one end of a picee of wire, and a coiled wire spring-ring formed on the opposite end of a piece of wire.

No. 237,005. Pencil.—Bradley A. Fiske, Napierville, Ill.

A lead pencil consisting of a lead holder, which also serves as a handle, having a central longitudinal socket to receive an independent lead point, a case having a cylindrical portion, a conical portion, and a lead point aperture, the holder and handle operating within the case by friction.

No. 237,012. Game.—Alvin O. Hall, Cincinnati, Ohio.

A game board, consisting of a map, showing political subdivisions in outline.

No. 237,026. Christmas Tree Decoration.—Theodore C. Knauff, Philadelphia, Pa. Filed December 18, 1880.

A Christmas tree ornament or decoration formed of a strip of thin material alternately slit on opposite sides, whereby a twisted or spirally shaped length of material is produced.

No. 237,045. Fountain Pen.—John S. Purdy, Brooklyn, N. Y.

DESIGNS.

No. 12,123. Movable Types.—James A. St. John, St. Louis, Mo. Term of patent, 3½ years.

No. 12,125. Font of Printing Type.—Andrew Little, New York, N. Y. Term of patent, 7 years.

No. 12,128. Font of Printing Type.—John K. Rogers, Brookline, Mass. Term of patent, 3½ years.

No. 12,135. Font of Printing Type.—James M. Conner, Greenville, N. J. Term of patent, 7 years.

No. 12,136. Font of Printing Type.—Herman Ihlenburg, Philadelphia, Pa., assignor to MacKellar, Smiths & Jordan, same place. Term of patent, 14 years.

No. 12,138. Font of Printing Type.—William W. Jackson, Philadelphia, Pa., assignor to MacKellar, Smiths & Jordan, same place. Term of patent, 14 years.

He who is false to present duty breaks a thread in the loom, and will see the defect when the weaving of a lifetime is unfolded.

Young Artist Blackboard

AND EASEL COMBINED.

For the Amusement and Education of the Young at Home.

A NOVELTY RECENTLY PATENTED BY THE

N.Y. SILICATE BOOK SLATE COMPANY,

No. 191 Fulton Street.

This Blackboard and Easel is accompanied with a set of nine new pictures, printed upon stiff cards to be placed in a groove at the top of the board for Drawing. It is reversible for marking on both sides; is very portable and easily carried about the house. Size 18x24 inches, height 46 inches, which allows the child to sit or stand while drawing.

No family should be without one. Price of all with chamois, rubber and five dustless crayons, **$3.00.**

Sent by Express to Dealers, one dozen in crate, or singly to Families.

SUCCESS.

Emerson says: Self-trust is the first secret of success—the belief that, if you are here, the authorities of the universe put you here, and for cause, or with some task strictly appointed you in your constitution, and so long as you work at that you are well and successful. It by no means consists in rushing prematurely to a showy feat that shall catch the eye and satisfy spectators. It is enough if you work in the right direction. So far from the performance being the real success, it is clear that the success was much earlier than that; namely, when all the feats that make our civility were the thoughts of good heads. The fame of each discovery rightly attaches to the mind that made the formula which contains all the details, and not to the manufacturers who now make their gain by it; although the mob uniformly cheers the publisher and not the inventor. It is the dullness of the multitude that they cannot see the house in the ground plan; the working in the mold of the projector. While it is thought, though it was a new fuel, or a new food, or the creation of agriculture, it is cried down; it is a chimera; but when it is a fact, and comes in the shape of 8 per cent., 10 per cent., and 100 per cent., they cry, "It is the voice of God." Horatio Greenough, the sculptor, said to me of Robert Fulton's visit to Paris: "Fulton knocked at the door of Napoleon with steam, and was rejected, and Napoleon lived long enough to know that he had excluded a greater power than his own." Is there no loving of knowledge, and of art, and of our design, for itself alone? Can not we please ourselves with performing our work, or gaining truth and power, without being praised for it? I gain my point, I gain all points, if I can reach my companion with any statement which teaches him his own worth. The sum of wisdom is, that the time is never lost that is devoted to work. The good workman never says: "There, that will do;" but, "There, that is it; try it, and come again, it will last always." If the artist, in whatever art, is well at work on his design, it signifies little that he does not find orders or customers. I pronounce that young man happy who is content with having acquired the skill which he had aimed at, waits willingly when the occasion of making it appreciated shall arrive, knowing well that it will not loiter. The time your rival spends in dressing up his work for effect, hastily, and for the market, you spend in study and experiments toward real knowledge and efficiency. He has thereby sold his picture or machine, or won the prize, or got the appointment; but you have raised yourself into a higher school of art, and a few years will show the advantage of the real master over the short popularity of the showman. I know it is a nice point to discriminate this self-trust, which is the pledge of all mental vigor and performance, from the disease to which it is allied—the exaggeration of the part which we can play; yet they are two things.

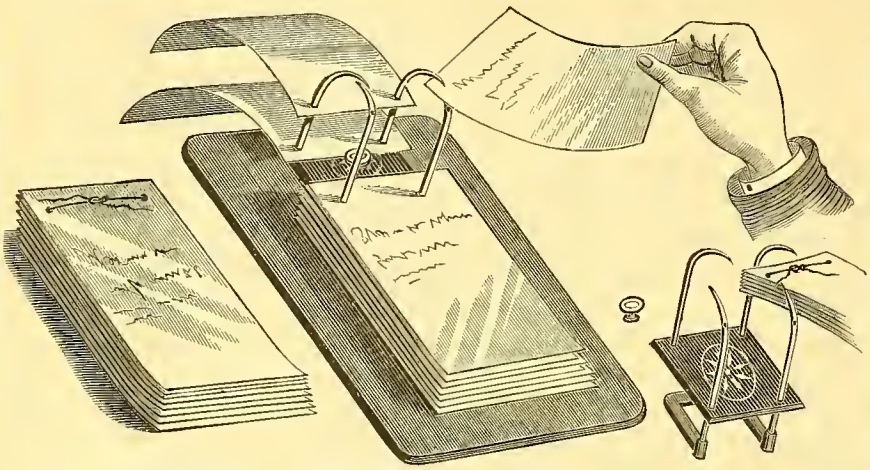
At the last annual meeting of the Society of German Naturalists and Physicians, Professor H. Cohu, of Breslau, directed attention to the subject of print and its effect upon the eyesight. He protested against the use of script type, as the reading of such print necessitated the bending of the head on one side, and this in turn weakened the muscles of the head and neck. As regards the size of type, he discountenanced the use of nonpareil and brevier, and insisted that neither of these ought to be employed in school books or scientific periodicals. The width of a line of print, he urged, should never exceed twenty-two picas.

THE H. & W. FILE.

The Most Substantial, Simple and Convenient File Made.

A paper may be removed **MORE QUICKLY** than from any other File.
It need not be touched with the hands in order to file a paper!
It is **ALWAYS READY** for use.
It will accommodate 500 sheets.
It has **NO SPRINGS** to get out of order.
Its arms are **Solid Brass**, not tubes; therefore, stronger.
It has **NO MACHINERY** to work.
It requires **no separating of parts; no "Opening of Gates!"** no moving of anything up or down, sideways or otherwise, in order to file a paper!
It has **NO DETACHED APPARATUS** of any kind.
A paper **MAY BE READ ON ALL SIDES**, without removing from the File.

☞ FOR SALE BY ALL JOBBERS.



☞ FOR SALE BY ALL JOBBERS.

A paper may be **taken from or placed in any part of the File** without mutilation and without removing any other sheets.
A compact package may be made of its contents when full, and **removed all tied together.**
ANY BINDER may be used in connection with this File, as the package is in shape to go into any of the **BOXES** made for that purpose.
Its convenience is most appreciated in the using.
It will undoubtedly **OUTLAST ANY FILE MADE.**
It is made from the best **SEASONED WALNUT, HANDSOMELY FINISHED.**
It is richly mounted in **Brass**, and Japan Work.
IT IS MADE TO SELL FOR ITS MERITS.

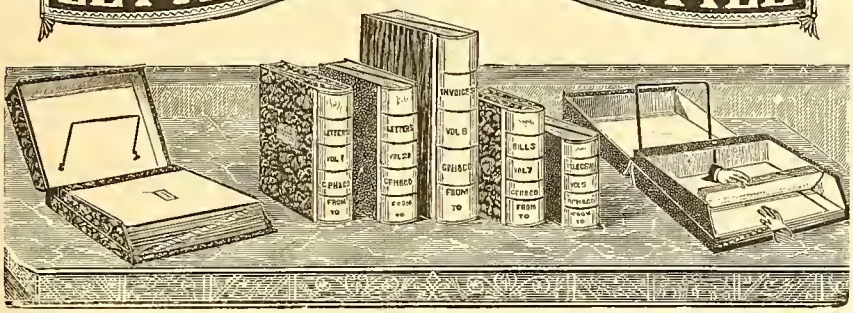
ECONOMICAL. CLEANLY AND LABOR SAVING

SELF INDEXING BROWN'S PERFECT SELF-BINDING

LETTER, BILL AND INVOICE FILE

PATENTED OCT. 30 1877



Prices: Marble Paper Sides, $15.00; Cloth, $18.00; Walnut, $24.00 per doz

The following are a few of its many advantages:

1st—It will hold nearly twice the quantity of any File of equal bulk.

2d—It costs less than any File of equal capacity.

3d—It is instantaneously *self-indexing* and *self-binding*.

4th—It does not *tear* or *mutilate* the letters.

5th—Any letter or paper can be *removed* and *replaced at pleasure* and at any time, *without* tearing or mutilating, or in any manner *disturbing* the others.

6th—Its contents are not *exposed* to *dirt* and *dust*, and are kept in a cleanly, orderly manner for rapid reference.

7th—It *files*, *indexes* and *binds* in *one operation*, and in less time than is consumed for either with any other File now in the market.

8th—It is adapted to any system of filing.

Trade Gossip.

All new goods and designs which are not, strictly speaking, "Novelties" will be noticed under this head. The trade are requested to forward descriptions with samples in order to secure proper notice.

McLoughlin Brothers report an immense business in valentines.

Louis Amberg, dealer in notions, Cincinnati, Ohio, is closing out.

McNeil Brothers, printers, San Jose, Cal., have dissolved partnership.

Greenburg & Pulaski, dealers in notions, Peoria, Ill., have dissolved partnership.

Hollister & McKinney, dealers in notions, Moosic, Pa., have dissolved partnership.

An attachment has been placed on the stock of George H. Hines, printer, Portland, Or.

Ed. L. Adams, publisher of the Marathon (N. Y.) *Independent*, has sold out to Brooks & Gee.

Martin R. Dennis, of Martin R. Dennis & Co., booksellers and stationers, Newark, N. J., is dead.

Myers Brothers are making a great display of De La Rue's valentines, many of which are strikingly beautiful.

I. H. Hamburger has moved this week to 324 Broadway, where he has secured more capacious quarters than those just vacated.

J. E. Boren, bookseller and stationer, Weatherford, Tex., has admitted A. D. Oliver to partnership. The style is Boren & Oliver.

Mellichamp & Edwards, publishers of the Orangeburg (S. C.) *News*, have dissolved partnership. R. S. Mellichamp continues.

J. H. Bufford's Sons are constantly bringing out new goods. Some of the later introductions are elegant in design and elaborate in finish.

Henry Levy & Son are making active preparations for the spring trade. They propose to outdo all their former efforts during the coming season.

Miller, Wagner & Umdenstock, printers, Chicago, sustained a loss of $15,000, Thursday night, by fire, caused by the explosion of a gas meter. Mr. Umdenstock was severely burned. E. W. Carr & Co., bookbinders, and Pilkin & Conver, printers, also suffered a loss by the fire.

Charles J. Cohen, Philadelphia, is making a large assortment of envelopes suitable for inclosing valentines. They are sold, each size separately, by the thousand, and they are also put up, assorted sizes, in a box of 500, the net price of which, to the trade, is $2.25 per box.

The new quarters to which Ivison, Blakeman, Taylor & Co. have recently removed are splendidly fitted up. The first floor is divided into offices, the furniture and partitions of which are of the richest mahogany elegantly carved. A special notice of the removal of the firm appears elsewhere.

John R. Campbell and Charles H. Campbell, composing the firm of A. Campbell's Sons & Co., manufacturers of printing presses at No. 19 Beekman street and at No. 44 State street, Brooklyn, have made an assignment to Lawrence V. Conover, giving him a preference for $5,930, and to Scherenend & Lee, of Chicago, $1,785. The present firm was formed on March 1, 1879, the partners being the sons of Andrew Campbell, the inventor of the printing press which bears his name. The amount of the liabilities is not known.

A. Weidmann & Co. are very busy fitting up their new and elegant quarters at 306 Broadway, where, in a few days, they will be ready to receive their friends and show them one of the best assortments in the toy line in the city. Masks and costumers' materials are a specialty with this firm, and the season, which is now at its height, is the best for several years. This firm also offers a complete line of spring goods, such as marbles, tops, base balls and bats, hoops, &c., including several novelties. Dealers will do well to address this firm before placing their orders. The chief of this firm is now on the way to Europe, and, judging from his good taste and long experience, the trade may expect a fine selection of novelties and staple goods.

R. Fideau, 16 Beekman street, reports that, notwithstanding business generally in school slates is dull, as is usually the case at this time of the year, he is filling a great many trade orders for the "Unparalleled" school bags, as announced in another column. He expects to have ready to supply the trade next month two new kinds of school bags, for which he hopes to find a ready sale. He keeps on hand at all times a well assorted stock of German manilla bags, which he offers at very low prices, and claims that they are the best of the kind in the market. His goods are for sale by jobbers everywhere, and he invites inquiry from the trade for his price list and terms.

Carter, Rice & Co., Boston, have added a manilla department to their regular business. This is in charge of O. D. Forbes, formerly of the firm of W. T. Barker & Co. I. S. Lion, formerly with the Dillingham Paper Company, has also connected himself with Carter, Rice & Co.; and the firm having purchased the stock of the company mentioned, has on hand a large line of manilla papers of all grades and of twines, which it offers at the lowest market rates. It has a line of manilla bags which it says it will close at a bargain.

B. F. Neufville, stationer and bookseller, of Charleston, S. C , whose assignment was reported last week, it is said will not be able to pay his general creditors a very large dividend, having made preferences to a considerable amount, which will absorb very nearly all of what they might otherwise receive.

Henry E. Rogers, the well known paper manufacturer, of South Manchester, Conn., has in his possession an old Latin Bible published in 1573, under authority granted by Charles IX., of France, the year before.

Stirn & Lyon, wholesale dealers in fancy goods, New York, having dissolved partnership, a new firm has been formed under the same style, with a special capital of $25,000, to January 31, 1884.

Mack & Co., manufacturers of paper collars, Albany, N. Y., have dissolved partnership. E. E. Mack continues under the old style.

Olshansen & Kieselhorst, dealers in periodicals, &c., St. Louis, Mo., have dissolved partnership. E. P. Olshausen succeeds.

McCarty & Hasberg show one of the prettiest lines of fans ever exhibited in this city. The trade should see it.

Mrs. Ridley, fancy goods dealer, St. Catherines, Ont., Can., has advertised the business for sale.

The stock of Andrew B. Coghlan, paper manufacturer, Whippany, N. J., has been attached.

The *State Register* Printing Company, printer, Springfield, Ill., has made an assignment.

Chas. E. Nash, printer, Hallowell, Me., has removed to Augusta, Me.

J. H. Clergue, fancy goods dealer, Bangor, Me., has been burned out.

Miss Hodge, news dealer, &c., Derby, Conn., has sold out to Chas. D. Warren.

W. C. Peck, wholesale and retail dealer in notions, Springfield, Mo., has sold out.

Mrs. L. E. Jackson, dealer in fancy goods, Virginia City, Col., is closing out.

George F. Sproule, stationer and bookseller, Brantford, Ont., Can., is closing up.

Thos. Collins, publisher and printer, Portage La Prairie, Manitoba, has been burned out.

F. J. Bush, publisher of the *Clear Lake Mirror*, Clear Lake, Iowa, has sold out to Cooley Brothers.

Creelman Brothers, dealers in fancy goods, Georgetown, Ont., Can., have sold out to James K. Donnelly.

The holiday trade in Springfield, Mass., is said to have been the liveliest the stationers of that city have experienced for many years.

J. H. Van Kirk, of J. H. Van Kirk & Co., paper dealers, Beekman street, has been confined to his house for the past week, suffering from a very severe cold.

G. H. Floto, who is now on his trip South, says trade is very fair, and that he has been selling as many valentines for Marcus Ward & Co. as he did Christmas cards.

William C. Horn, of Koch, Sons & Co., whose indisposition was noticed last week, is still unable to attend to any business, and continues to receive the attention of his physician.

The failure of three stationery and book houses in Charleston, S. C., in one week has attracted some attention in the trade, and has induced several to make the query, "What's the matter with Charleston?"

The London correspondent of THE STATIONER has been utilizing the different styles of Ph. Hake's cards. His name, with the titles of the publications of the Lockwood Press, &c.. which he represents, are handsomely embossed and printed in colors on the cards. The dies were cut by Baddeley Brothers, London, and the work is clearly and excellently done.

The Springfield Printing Company, Springfield, Mass., patantee of the tear-off calendars, reports that it is extremely busy at this late day filling orders received since January 1. The popularity of its brass heads for calendars is said to be attested by the large number of manufactnrers who took out licenses to make them. C. M. Ward, the representative of the company, who has lately come from the West, says that he has taken large orders for the Tapley letter file and the brass-head blotting pads which the company manufactures.

The friends of Daniel Slote will regret to learn of his severe illness for nearly a week past. It appears that about the middle of last week he went over to Brooklyn to visit his brother, who resides on Clermont avenue, and was attacked quite suddenly with an affection of the stomach, which so prostrated him that it was not deemed prudent by his physician to advise his removal to his residence in this city. On Sunday last his condition was quite critical, but subsequently a favorable change took place, brought about by careful medical attention and good nursing, and his friends are hopeful that he will so far recover in a few days as to be able to return to his home and attend to business. He has the sympathy of a large number of friends and acquaintances,

who have been anxiously inquiring of his condition.

John A. Byron, printer, Vernon, Conn., has made an assignment.

C. F. McElroy, dealer in notions, Hannibal, Mo., is closing out.

W. C. C. Moulton, dealer in fancy goods, Salem, Mass., has sold out.

Day Brothers, publishers of the *Sentinel*, Fairmount, Minn., have dissolved partnership.

The stock of H. J. De Boer & Co., junk dealers, San Francisco, Cal., has been attached.

C. G. Chamberlain, publisher of the *Republic*, Jackson, Minn., has sold out to Burt W. Day.

George Tilles, Fort Smith, Ark., sends out his opening announcement for the New Year, printed on one of the popular engraved folders. His list takes in about everything in the stationery and book line.

P. P. McHugh, who was burned out at 51 Ann street on January 21, has established temporary headquarters at 63 Ann street, on the second floor, until such time as his old premises are refitted. At his present location he is filling orders with new stock made up with new machinery. The insurance companies have made a full settlement with him under his policies of insurance which leaves him with a loss of about $3,100. His new store, when completed, will be a great improvement over his former one, and will be in readiness for occupancy during the present month. He asks of the trade a continuation of the patronage which was rapidly increasing at the time of the fire, and asserts that his facilities, both financially and otherwise, were never better. He desires to return thanks for the material assistance and sympathy extended to him by competitors in the same line of trade, among whom are Trier & Son, Charles T. Bainbridge's Sons, William P. Dane, Philip Hake, A. M. Collins, Cope & Co. and the Phenix Card Company.

ANSWERS TO CORRESPONDENTS.

F. C.—The Eagle "automatic, indelible pencils" are hard to get. On inquiry at the manufactory we are told that there may be a chance to fill an order if sent in at once. You know the address.

P. & Sons.—Assignee for McFeeters & Hall is Joseph F. Barton, and of J. S. Robinson Joseph C. Edgerton.

F. M. W.—We cannot find where the prepared zinc plates can be obtained. Those who use them will not, we are told, dispose of the right or the plates.

OBITUARY.

George H. Sanborn.

News was received on Thursday last of the death of George H. Sanborn, well known through the binding and paper-cutting machines of which he was the inventor. Mr. Sanborn was born in Concord, N. H. in 1830, and learned the bookbinder's trade in his father's establishment at Portland, Me. While still young he went to Boston, where he invented several machines that are now in use in the principal binderies all over the world. He went to Europe soon afterward to introduce his machines, and met with great success. He came to this city in the spring of 1868, and began the business of making bookbinding and cutting machines at No. 25 Beekman street, where he remained in business till his death. He was the inventor of the "Star," "Eureka," "Gem," and other cutting machines, and the well known backing machine. He went to Chicago on business a short time ago, and contracted a severe cold. His ailment was not thought to be serious; but on Monday he changed for the worse, and his cold rapidly developed into pleuropneumonia. He died in the Grand Pacific Hotel, Chicago, on January 26, and his body was brought to this city, the interment being made at Greenwood on Monday of this week.

PERFECTED STYLOGRAFIC.

The original and genuine Pen. Warranted the best made. Thirteen Patents granted to **A. T. CROSS,** the last, June 29, 1880, being the most important and giving the name **Perfected.** All cuts are exact size

MAXIMUM.—Holds most ink of any pen made; tires the hand less than smaller barrels. Fits Hambler's Pocket. Same price as Long.

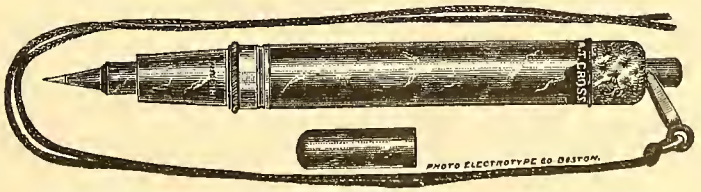
LONG.—The famous Desk Pen. Extra long. Holds most ink, except the **Maximum.**

SHORT.—Most widely known and sold heretofore; but Maximum is better for desk

or Hambler's Pocket, Giant for Vest Pocket or Cord. So this will be largely superseded.

Thirteen patents granted; seven more applied for; more genuine improvements; better record; more styles; larger stock; more thoroughly protected by patents than all rivals combined.

☞See Descriptive Circulars.



GIANT, with Cord and Gold Ring, same price as Short.

Dealers and agents supplied with wood, glass and paper signs, placards, circulars, leaflets and cuts. We make both largest and smallest Pens, both of which will have all new improvements.

☞See Descriptive Circulars

VEST GIANT, Plain, - - $2.50.

All Styles up to $4.00.

☞ **VEST GIANT.—The Cheapest PERFECTED Pen made.**

THE STATIONER.

DEVOTED TO THE INTERESTS OF THE

Stationery and Fancy Goods Trades.

WEEKLY---$2.00 PER ANNUM.

Single Copies - - - - 10 Cents

NEW YORK, THURSDAY, FEBRUARY 3, 1881.

Advertisements cannot be received for insertion in the current week later than 12 M. on Wednesday. The charge for advertising is 25 cents a line, each insertion. Special terms for standing and displayed advertisements to be had on application.

This journal aims to be a medium of information for and a representative of the interests of every one connected with the stationery and fancy goods trades. It contains a full and trustworthy survey of the market for stationery in this country, in all cases giving the actual prices at which goods can be bought of importers and jobbers in this city, together with a detailed account of novelties in the trade, patents relating to stationery, and current items of interest. A review of foreign markets and accounts of movements abroad will also be furnished, and no pains will be spared to make THE STATIONER a thorough and complete exponent of the trade.

Subscription and postage for Great Britain, per annum..... 12s.

Any information our readers may wish to obtain shall be cheerfully given, and prompt replies will be made to all inquiries addressed to us on any subjects of interest to the trade.

Communications on all trade matters are earnestly solicited. Address

HOWARD LOCKWOOD, Pres. and Treas.

Subscribers to THE STATIONER can be supplied with the best cloth binder in the market. Deliverable at the publication office. Price, fifty cents.

Readers of this paper who avail themselves of the information obtained from its columns, by advertisement or otherwise, are requested to notify their correspondents of the source of their information.

NOTICE is given to our friends, who may not be apprised of the fact, that we have disconnected our office from the telephone service.

A CORRESPONDENT presents the opposing view of the license question. He makes statements which we have no reason to dispute, and we certainly sympathize with him and with all other members of the statiouery trade who have experienced the annoyance which he cites in justification of his advocacy of the special tax laws. But, we ask, does the imposition of such a tax relieve the stationer in any town if the commercial traveler takes out his license? We answer, as we are sure he will reply, No.

THIS is a question not only of equities but of law. Settle one and enforce the other. The point at issue, and upon which we have commented, is whether any State or municipality has the right to prohibit or restrict citizens of other States or municipalities from trading within their confines, except under limits which apply to their own citizens as well. Make the law general. Do not force invidious distinctions upon those who have, as citizens of the Republic, equal rights, and then the principle of freedom is maintained. If the license laws are unconstitutional, they are illegal. This is the question of law which ought to be decided.

Now, as to the equities. It seems to us that it is just as unfair for a commercial traveler to sell stationery to a dry goods house under a license as without oue. How does this proposition strike our friend? It may be answered that the commercial traveler will never come near a town where he is obliged to take out a license. Admitting this, what is to become of the retailer who wants to be alert, enterprising, to keep on hand the latest and best goods, and to work up a profitable trade according to the extent of his custom and his means? Can the retailer afford to buy samples or to make regular trips to New York or any of the larger cities to examine goods or make up his assortment? He certainly cannot order on chance or speculate on what may or may not suit the tastes of his trade. A good buyer must see the goods and select those which he knows or thinks are best adapted to his requirements. He cannot afford to bite off his profits in expensive excursions, and if he does not come in contact with the market in one way or another he must rest content to sell old stock or goods such as he has handled in the past, until at length his custom falls away from him, because people will find out that he is not up to their requiremeuts. He may make the same discovery, but will it help him much?

WE regard the commercial traveler as a "necessary evil." He is not always right, as instance the case which our correspondent cites. He has, however, rights; and we believe the right to pursue his calling without submitting to unjust distinctions, or to arrest and imprisonment for prosecuting an avocation which another citizen may engage in, simply because of a difference in habitation. But we do deny his right, on equitable grounds, to sell goods in direct competition with his trade and to dry goods houses, druggists, and other traders who make use of stationery articles solely to attract customers, to the great injury of the legitimate dealer. We have noteworthy instances of firms which refuse to sell goods outside of the trade at regular discounts, or under the retail price. Would that we had more of them. But where such competition arises or is fostered and encouraged by any house or its traveling representative, the stationer should meet it on its own ground and flatly refuse to buy anything, stating plainly the reasons for so doing, and giving notice that orders will be placed with competing houses or manufacturers. There is, fortunately, enough competition in the different stationery lines to permit of this, and it is rare that something as good or equally novel and serviceable—perhaps identical—cannot be had of others. Then again, a dealer can buy on contract that the seller shall not dispose of any similar goods to houses not regularly in the trade. If the seller hesitates, or refuses to do this, reject his samples. If he assents and straightway sells to others in violation of his promise, it constitutes a breach of contract. Let his employer sue for the money for goods ordered and see what he can make of it. To sum up in a few words, the commercial traveler ought to respect the rights of his special line of trade. If he has any longing to sell to dry goods dealers, &c., we say to him: Don't. If he persists in his iniquity, and beseeches stationers to buy of him, we say to *them:* Don't. So far as he is concerned, the remedy is largely in the hands of the trade. The equities in the latter instance are against the drummer, with the law in his favor. Upon the license question he has equity on his side with the law against him —but is it good law? That is the question.

CINCINNATI NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

CINCINNATI, January 31, 1881.

On Saturday the stationery house of Beeler & Co., on Fountain Square, on the Wiggins block, a few doors east of Vine street, sold out at auction, through the proxy of an assignee. The assignment was made several weeks ago, and was noted in THE STATIONER at the time, but Beeler & Co. were permitted to continue the sales through the holidays. At auction the goods generally brought higher prices in lots, than those at which they were marked for sale over the counter previous to the auction. The store was crowded with buyers, most of them small dealers, and the sale went on briskly.

There are indications in the mercantile stationery establishments that the trade in the country is extending. Many new retail dealers are setting up in the outlying cities and towns in this rich Ohio valley.

The price of rags and old paper holds up well and the ragpicker and careful housewife are en-

couraged to diligence in the one instance and economy in the other.

There is every reason to believe that the innocent refinements of civilization are moving out into waste places, which the stationer is one of the first to discover. He can gauge the refinement and culture of a community by the quantity and the quality of goods in his line they demand and consume.

Among trade visitors who have recently put in an appearance here are Mr. Landers, of Cutter, Tower & Co., New York; Mr. Phillips, of B. Illfelder & Co.; Mr. Coffin, of J. G. Shaw & Co.; Mr. Beach, of the New York Blank Book Company.

B. A. Stone, of Philadelphia, "the just persistent enough and not too genial pocketbook man," has returned from the South all aglow with enthusiasm over the business prospects of the sunny section of this American nation and eloquent with reports of the success of his trip. Mr. Stone enjoys the esteem and confidence of his customers in this city.

A larger business than much of the English speaking world of America is aware of is done in issuing publications in the German language in Cincinnati. German bookstores are large dealers in stationery and fine art books, prints and engravings. Wilde's store on Fountain Square is a bazaar of beauties.

M. & R. Burgheim, 484 Vine street, "over the Rhine," print annually five different German almanacs, and a German almanac is formidable in size and abounds with illustrations. Of one edition they sell 5,000 and of another 4,500 copies annually in Germany. Just before the holidays they embarked in the daring enterprise of printing four different books of German fairy stories —in German, of course—illustrated with fine chromo work of original designs, made and executed by F. Achert, of Cincinnati. M. & R. Burgheim use better paper than is found in many of the German books imported here, and they escape the expense of tariff, freight and the like.

Hon. D. W. McClung, recently appointed collector of customs at Cincinnati, has a large interest in one of the paper mills in the valley of the Great Miami, north of Hamilton. I think it is at Miamisburg, but I ca n't stop writing to ask him, to make sure. No matter, he is of the guild. He has been schoolmaster, quartermaster, assistant postmaster, attorney, editor, probate judge, machine manufacturer and paper manufacturer, aud has lived and prospered. Notwithstanding his interests are promoted by increasing the uses of paper, he is notably opposed to paper money. From the position of assistant postmaster in this city he passes to the collectorship. PRINCE WILLIAM.

The Special License Question.

SMALL TOWN, Pa., January 28, 1881.

To the Editor of The Stationer:

The question of the justice or right of States to impose a tax or license on commercial travelers seems to be attracting attention, and I hope the question will be thoroughly discussed in the different trade journals. I have read several articles published on this subject, and I have not yet seen or heard anything which leads me to think that such a law in every State would not be beneficial to the general trade.

That the agency system is the means of cutting up all kinds of trade into shreds, cannot be questioned anywhere outside of the large trade centres. Viewed from a point like New York city, this may seem worse than nonsense; but looking at it from a town of ten to twenty thousand inhabitants, it puts a very different phase upon it. A few years ago each particular branch of the retail trade kept in stock such goods as were supposed to belong to the line; but since the agency system has been pushed to the extent of making it an abominable nuisance, things have got so mixed that you can't tell a stationery store from a dry goods, or almost any other kind of store. And the reason for it is plain.

Here comes an agent, with two or three or more big trunks, with a line of goods belonging to the stationery trade. He has all kinds of staple stationery, besides a large line of fancy goods. This man comes to me and he says:

"Mr. ——, when will it suit you to step up here to the hotel with me ?"

"Well," say I, "I don't know that I want any goods in your line; my stock is sufficient for present needs."

But he urges me to "take a look" at his stock, and I go with him and select a few articles. He shakes his head and thinks "This won't do; I must sell more goods here; it has cost me $— to come here, and I must make it up somehow." Out upon the town he starts, and he sells to my dry goods neighbor, and to the man across the street, and to this one and that one, so that, by the time he gets all over the town, he has sold small bills of goods belonging to my line to a good many merchants and shopkeepers not at all in the stationery trade, and thinks the stationers of the town slow fellows—not taking into account, or knowing, that only the day before I bought from another agent a "big bill" of just such goods as he carries. And this is repeated day after day; sometimes two, three, or more agents awaiting their turn to see the "buyer," and when they fail, each one in turn, to sell him a "big bill," which is inevitable, they all start out and the town is canvassed again, three or four fold.

Just before Christmas, a walk up and down the main street of my town showed very conclusively that trade had been worked up in just the way described. Goods which were no more suited for dry goods stores than a crowbar in a jewelry store could be seen in the windows of such stores, and a general confusion of goods was the order; and the result, I venture to say, from personal observation is, that sixty per cent. of all the holiday goods bought by the different merchants here are yet on their shelves, and are worked off now at any price, to the detriment of the legitimate trade.

If this is healthy trade, I should like to know what is unhealthy trade. Healthy trade, it seems to me, would rather be in large consumption, or in production keeping pace with consumption, than in large manufacture and in filling up retail stores promiscuously with goods, followed by results as above stated.

Times are undoubtedly improving; but if this stuffing process, through traveling agents, is carried on a while, the patient will very soon be on his back again.

I am of the opinion, therefore, that State legislation in this regard is a blessing rather than a curse, and is right and just, instead of oppressive; and I would favor a license law as affecting traveling salesmen in this State, believing it to be better for the permanent prosperity of the business of the whole country that merchants should go to the market, rather than the market go to them in this avalanche fashion. Jo.

Market Review.

OFFICE OF THE AMERICAN STATIONER,
WEDNESDAY, February 2, 1881.

THE MONEY MARKET.—The money market continued to work easily, and the offerings of capital were abundant at comparatively low rates of interest. Borrowers on call, on pledge of stock collateral, found ready accommodation at 4@6 per cent., the great bulk of the business, however, being effected at the intermediate rate. The government bond dealers had no difficulty in supplying their requirements at 3 per cent. In the discount market prime mercantile paper sold at 5@5½ per cent., according to date of maturity. The stock market continues active and for the most part strong, the long looked-for "bear" movement still being in the future. There is said to be an increasing short interest, but the fact remains that the "bulls" still control the market. The government bond market was characterized by considerable activity, and was affected to a large extent by the conflicting reports from Washington in regard to the new funding bill. The changes in quotations, however, on the week's transactions are unimportant. Railroad mortgages were very actively traded in, and many of the low-priced issues were purchased in round amounts and at advancing quotations. Foreign exchange is quiet. and has rnled at lower rates by from 2c. to 4c. than have prevailed at the same time of the year for many years past. This, no doubt, is mainly due to the demand for our securities abroad as well as to the heavy exportation of our products.

THE PAPER MARKET.—The general market has undergone very little change since our last review. Manufacturers still have enough orders to keep them fairly engaged, and many are unwilling to take additional contracts until they can see their way clear for their fulfillment within any reasonable time. While dealers in all branches of the trade are not exactly driven with business, yet in some grades of goods dealt in this is literally a fact, and, taken altogether, the jobbing trade have very little to complain of. It is true that there is not that amount of goods being handled now as there was a year ago at this time, yet the conditions of trade are now on a far more satisfactory basis, as the demand is governed solely by the actual requirements of consumers and free from pernicious speculative influences, which, together with the ruling steadiness of values, promises a very satisfactory result. In fine writings and print papers there is no new feature to add, the business in both being still only of a moderate character. Manilla wrappings can be said to take the lead in point of activity at the present time. All the mills have as much as they can do, and dealers generally wear very cheerfnl countenances. Prices, too, are firm throughout, and difficulty is experienced in placing orders at the mills. Straw wrappings show no new features, trade being about as last week. Binders' boards are moving moderately, and prices are steady. We quote: $80@90 per ton for No. 1 and $60@70 for No. 2. The trade in straw boards is much lighter than a month ago, as box makers anticipated their wants for the spring trade to a great extent immediately after the reduction in prices occurred early in December.

THE STATIONERY MARKET.—Business in staple goods, although only moderately active, is very much better than it was generally thonght it would be a month ago. Many of our large jobbing houses have been kept fairly engaged during the week in filling orders sent in by mail from out-of-town buyers, while there has been quite a considerable business done in the supply of city customers. Many of the new styles of spring goods which have already been put upon the market have met with much favor, and coupled with the fact of fair orders still coming in from country customers for additional stock for reassortments, have brought about a more active condition of things than is usual so much in advance of the openmg of the spring trade. The valentine and fancy card houses report unusually heavy sales, and the result of the season's trade in the former will be the largest the trade has ever experienced. Dealers in Easter cards and fans report an excellent trade, and the assortment of the former is more varied than in any previous year. A feature of the trade this week is the removal of a nnmber of well known houses, which in most instances is for the purpose of securing increased accommodations or more eligible locality. We do not hear of any changes in prices.

NEW PROCESS OF ENGRAVING AND PRINTING.

COPPER PLATES vs. LITHOGRAPHY.

Advantages of this Process over Stone Work:

A CLEAR SHARP IMPRESSION—AS METAL IS HARDER THAN STONE.
THE PAPER RETAINS ITS GLOSS—NO DAMPING REQUIRED.
WE PERFORATE EVERY BLANK WE PRINT BY OUR ROTARY MACHINE.
OUR NEW DESIGNS ARE ALL ORIGINAL AND FINELY EXECUTED.
WE USE NOTHING BUT HEAVY TUB-SIZED FIRST-CLASS PAPER.
EACH BOOK IS STRONGLY BOUND AND EVERY HALF DOZEN PUT UP IN BOXES.
OUR PRICE IS MUCH LESS THAN LITHOGRAPHIC WORK.

NOTES, DRAFTS, RECEIPTS, ORDERS, CHECKS, &c., by the above Process, and also from STEEL PLATES.

Designed and Manufactured especially for Stationers.

CASUAL CONVERSATIONS THROUGH THE BELL TELEPHONE.

The advantages of the telephone have been set forth so vividly in print, both in return for the gratuitous use of instruments and by the company controling the delightful engines of conversation, that any further reference to them might be considered superfluous. Admirers of the Bell telephone, however, seem in general to have been so carried away by their admiration that they have omitted to state in writing half the charms that this latest labor-making appliance possesses. We, who publish weekly, can more calmly and dispassionately discuss the subject, fortified by that serene patience so necessary to a just estimate, as one of the pleasing results of the telephone's missionary work among heathen business men.

Not the least eminent of the virtues of the Bell telephone are the pleasant social relations which it brings about. These are various and sometimes even refreshing to the wrinkled and careworn toiler whose days are numbered by the folios of the ledger and punctuated by figures. He approaches the telephone, his nerves strung to the utmost tension, touches the knob as the printed rules require. and places the receiver to his ear. The dialogue is somewhat as follows:

Sweetly Sentimental Feminine Voice—"Hel-lo, 469 Great Jones street; what do yon want?"
No. 469 (mollified and mystified)—"Samuel Brown & Co., No. 1,080 Broome street."
S. S. F. V. (in tones of mingled affection and surprise)—"Who?"
No. 469 (repeating his former request).
[Interval of five minutes.]
S S. F. V.—"Did you say Samuel Jones & Co., of 1,810 Brown street?"
No. 469—"No; I said as distinctly as I could, Samuel Brown & Co., No. 1,080 Broome street."
S. S. F. V. (con molto expressione)—"You don't say so, smartie; don't get mad; that's a nice fellow."
[Interval of eight minutes.]
S. S. F. V. (caressingly)—"Hello, No. 469."
No. 469—"Well, Central?"
S. S. F. V. (tenderly)—"Did you say"——
Bang!
No. 469—"What is the matter?"
Grnff Bass Voice—"For God's sake say yes or no; are you coming over to-night?"
No. 469—"Coming where?"
G. B. V.—"To the free and easy."
No. 469—"Who the dickens are you?"
Bang!
[After the storm a calm.]
Still, Soft Voice—"Hello!"
No. 469—"Hello, yourself. Is that you, Central?"
S. S. V.—"Are you through with the telephone?"
[It seems that the discreet instrument is incapable of transmitting the word "darling," and every sentence from the central office seems to he unfinished, probably for that reason.]
No. 469—"Finished? How in thunder can I finish unless you connect me with the party I asked for?"
S. S. V. (reproachfully)—"Please don't use naughty words" (dear or darling again omitted). "Who do you want to speak with?"
No. 469 (wrathfully)—"I want Samuel Brown & Co., No. 1,080 Broome street."
Female Voice (in lofty indignation)—"Then I wish you would say so."
[Interval of ten minutes.]
No. 469—"Hello, Central!"
[There being no response, No. 469 touches the knob, as directed.]
Caressing Feminine Voice—"Hel-lo, No. 469 Great Jones street."
No. 469—"Can't I get Samuel Brown & Co.?"
Exquisite Contralto, in tones of bewitching tenderness—"Did you ever get them before (dear)?"
No. 469—"Of course I have."
E. C., &c.—"When (dear)?"
No. 469—"Yesterday."
[Five minutes' interval.]
Sweet Female Voice—"Hel-lo, No. 469; are you *still* there?"
No. 469—"Yes, go ahead."
S. F. V.—"Don't speak quite so loud (dear); you'll break the transmitter."
No. 469—"Can I get Samuel Brown & Co.?"
S. F. V.—"What is their number?"
No. 469—"1,080 Broome street."
S. S. V.—"Waint *one* minute, please."
[Interval of ten minutes.]
S. S. V.—"Still there, No. 469 Great Jones street?"
No. 469—"Have you got Samuel Brown & Co.?"
S. S. V.—"Yes, there he is. Don't be long."

Conversation of two minutes between 460 and Brown, when—

S. S. Y.—"Hello, 469, are you through with the telephone?"

No. 469—"No, wait a—

Bang!

[Conversation interrupted for remainder of the day.]

There is another delightful phase of telephonic communication, which is somewhat as follows:

Courier Office (to Central)—"Please give me Mr. Spink, of No. 2,348 Forty-seventh street."

Central (after a pleasant interval of from five to ten minutes)—"Go ahead."

Courier—"There is a page missing from your copy—page eight."

Muffled Voice—"What?"

Courier (repeating)—"Page eight is missing from your criticism; can't you send it down?"

Muffled Voice—"Send a dray over Monday and you can have a full line of samples."

Courier—"Samples of what?"

Lively Tenor Voice—"Whose account shall I charge it to?"

Courier—"Say, Spink, are you going crazy?"

Muffled Voice—"Are you going to send, or what?"

Courier—"Send your own copy."

Tenor Voice—"Who are you?"

Courier—"*Musical and Dramatic Courier.* Who are you?"

Muffled Voice—"Reed & Co., Brooklyn. What do you want?"

[*Courier* explains.]

Reed & Co.—"I've been trying to get McKesson & Robbins, Fulton street, for half an hour, too; but go ahead if you are in a hurry."

[*Courier* calls Central.]

Silvery Voice—"Hel-lo, *Courier*, what do you want?"

[*Courier* repeats instructions.]

Silvery Voice—"You've been talking to him all the time. I will have to shut you off."

[*Courier* explains mistake.]

Silvery Voice—"I *beg* your pardon. You must not speak so loud. It is *your* fault."

Sometimes it happens that a merchant at an uptown hotel, unacquainted with the best society, finds himself in earnest conversation with a Murray Hill belle, when the dialogue takes this turn:

Belle—"You are impertinent, sir; I am not in the gents' furnishing business."

Merchant—"Who the dickens are you, then?"

Belle—"I am Miss So and So, of Park Avenue."

Merchant—"A thousand apologies."

Sweet Voice from the Central—"Are you through with the telephone?"

And so it goes on teaching mildness and patience and the control of one's temper to the most ferocious of fire-eaters, wooing man to hours of sweet communion with silver-tongued angels and turning his thoughts from the base and carking cares of business, lifting up to higher planes of thought, introducing him into the best society and bidding him rejoice that the Bell telephone has brought the millenium several feet nearer earth. Who would be without it?—*Musical and Dramatic Courier.*

Some of the early nations attained a knowledge of science and skill in art which were lost in the subsequent ages. Wendell Phillips' famous lecture on "The Lost Arts" ought to make us modest and less inclined to boast of our own superiority. In a recent lecture before the Geographical Society, Judge Daly paid a tribute to the knowledge of the old Babylonians. They were all well acquainted with the heavens, catalogued the stars, and named the constellations. They traced the sun's course through the twelve signs of the zodiac, and divided time into weeks, months and years. They speculated on the connection of the weather with the changes of the heavenly bodies, and thought the phases of the moon had a subtle influence. They noted the spots on the sun, and seemed to have possessed telescopes, as Layard found a crystal lens among the ruins of Nineveh. It is interesting to know that they had a seventh day of rest, corresponding to our Sabbath, and enacted rigorous rules for keeping it.

The number of books published last year in Switzerland amounted to 1,172, two-thirds of the total being in the German language.

VAN ANTWERP, BRAGG & CO.,

Eclectic Educational Series.

Cincinnati, February 1st, 1881.

The steadily increasing demand for the ECLECTIC EDUCATIONAL SERIES has determined us hereafter to give our entire attention to the manufacture and sale of our own publications and popular line of Blank Books, for which we shall be pleased to receive the orders of the Trade as heretofore.

We have disposed of our entire Jobbing stock of Miscellaneous School Books and Stationery to MESSRS. ROBERT CLARKE & CO., CINCINNATI, to whom we cordially recommend our customers. We shall from this date take the liberty to transfer to them all orders received by us for "outside" books and stationery.

Relieved from the detail inseparable from a large jobbing business, facilities for attention to our specialties are increased, and we hope to fill the orders of the Trade with greater promptness than heretofore.

We thank our friends for their generous patronage during the past forty years, and hope by exclusive attention to the publishing and manufacturing business to merit their continued confidence.

Very Respectfully,

VAN ANTWERP, BRAGG & CO.

Referring to the above notice we beg to call the attention of the Trade to our enlarged facilities for supplying, in any quantity, and at the lowest rates,

STAPLE AND FANCY STATIONERY OF ALL KINDS,
BOOKS IN EVERY DEPARTMENT OF LITERATURE.

Our Stock being one of the largest in the country, and selected with particular reference to the wants of the Western and Southern trade, purchasers ordering from us, either in person or by letter, can rely upon having their orders fully and carefully executed on the most favorable terms.

Catalogues of the various departments, some twenty in number, will be supplied on application.

Our stock embraces full and complete lines of all articles in the Book and Stationery Trade, enabling dealers to make their entire bills at one house, at the lowest rates.

The American Mail and Export Journal,

A MONTHLY PAPER DEVOTED TO THE AMERICAN EXPORT TRADE,

And for Circulation in Europe, Asia, Africa, British North America, Central and South America, Mexico, West Indies, Australia, New Zealand, East Indies, China, Japan, and the Sandwich Islands.

Published every Month, in one Edition, for all Countries. Subscription, $3.00 a Year, Post-paid; Single Copies, 25 Cents.

THE AMERICAN MAIL AND EXPORT JOURNAL is a medium for communication between *American Manufacturers and Exporters* and the *Foreign Trade*. Its idea and duty is to explain to people of other lands the nature, variety and advantages of American products, whether they come from the soil or the workshop. Its subject matter includes articles upon **Engineering and Machinery, Hardware, Textiles, Leather, Glass and Earthenware, Clocks, Watches, &c., Paper, Stationery and Fancy Goods, Metals and Mining, Drugs and Chemicals, Wines and Spirits, Freights, Produce, Provisions, Finance and Investments,** and other topics of general interest.

Agencies have been established in the following cities: In Europe, at London, Paris, Berlin, Vienna, St. Petersburg, Stockholm, Christiania, Venice, Turin, Antwerp, Amsterdam, Florence, Trieste; in South and Central America and West Indies, at Rio de Janeiro, Pernambuco, Rio Grande, Valparaiso, Valdivia, Barranquilla, Panama, Puntarenas, Montevideo, La Guaira, Havana, Matanzas, Curaçoa, La Paz, Barbadoes; in Australia, New Zealand and Tasmania, at Sydney, Melbourne, Brisbane, Adelaide, Auckland, Dunedin and Hobart Town; in China and Japan, at Foochow, Shanghai, Newchwang, and Yokohama; also at Honolulu, Sandwich Islands, and at hundreds of other cities throughout the world.

THE AMERICAN MAIL AND EXPORT JOURNAL is kept regularly on file at all **American Consulates** and **Commercial Agencies**, wherever established, and in this manner alone is brought under the direct attention of merchants and shipping houses doing business with the United States.

This Journal is also on file at over ONE THOUSAND **Chambers of Commerce, Boards of Trade, Banking Houses, Hotels, Reading Rooms, Libraries, Shipping Offices, &c.**, in important cities in all parts of the world.

THE AMERICAN MAIL AND EXPORT JOURNAL is sent regularly to the Export and Shipping Merchants in the cities of New York, Philadelphia, Boston and Baltimore, and to the same class of houses in London, Liverpool, Manchester and Birmingham. The English Export Merchants alone number about 5,000, and ship goods to all parts of the world.

The main portion of THE AMERICAN MAIL AND EXPORT JOURNAL is printed in English, that being the chief commercial language of the world.

A very complete *classified* list of advertisers appears in each number, with *headings* in **five** languages. This GLOSSARY enables readers not understanding English to refer at once to the advertisements they are interested in.

This Journal was started in June, 1877, after upwards of a year having been occupied in establishing Agencies, and arranging for its careful distribution throughout the world. A special agent was sent to Australia, New Zealand and the East Indies, prior to the issue of the first number. Our Agents, established all over the world, are using their best endeavors to promote the introduction of American goods.

THE AMERICAN MAIL AND EXPORT JOURNAL being the **PIONEER** in the field it occupies, claims the patronage of American Manufacturers and Exporters for the following reasons:

It is thoroughly Established and in a Prosperous Condition, the result of a most careful preparation before publication and the expenditure of a large amount of capital.

It is Entirely Independent, not being associated with any one firm or combination.

It is a Purely American Publication, its editorial columns not being open under any circumstances to describe foreign manufactures.

It is convenient in Size and Elegantly Printed on Strong and Finely-Finished Paper, thus insuring its preservation and presenting the cards of advertisers in the most attractive manner, quite equaling, if not surpassing, their own Catalogues.

Its Agents are Indirectly the Agents of all its Patrons, they being instructed to take personal interest in all the announcements appearing in the Journal, and always being ready to receive Catalogues and answer questions.

The First and Best of its Class, "THE MAIL," has gained a strong hold upon the Foreign Trade, and is especially in favor at all AMERICAN CONSULATES, where it is kept on file for reference.

It has nearly Completed its Third Year, and the manner in which it has been conducted from the start shows that it is in proper hands and under liberal management, and that with the increase of patronage it will also increase its efforts towards making the United States the great source of supply for the markets of the world.

Hundreds of our Leading Houses are ready to testify to the great value of this medium for reaching the Foreign Trade.

We refer to our oldest and largest patrons:

THE MERIDEN CUTLERY COMPANY, MERIDEN, CONN., write: "We have had more returns from our advertisement in THE AMERICAN MAIL than from *all other sources* of advertising *put together*."

JOS. DIXON CRUCIBLE COMPANY, JERSEY CITY, N. J., write: "We consider it of more value to us than any other method we have used to reach foreign buyers. THE MAIL has been the means, perhaps, to a greater extent than any other single medium, of promoting the export trade."

PERRY & COMPANY, ALBANY, N. Y., the great Stove Manufacturers write us: "We have had more applications for Circulars, &c., from readers of this paper than from all others combined."

MAST, FOOS & CO., Agricultural Implements, SPRINGFIELD, OHIO, write as follows: "THE MAIL AND EXPORT JOURNAL is one of the best mediums we have ever employed for introducing our goods to the world. It has brought us into correspondence with some very important trade."

☞ *So say most of our Patrons!!!* ☜ Orders for Advertisements should be sent in by the 25th of the Month preceding the date of issue. All communications should be addressed to

HOWARD LOCKWOOD, Publisher and Proprietor,

P. O. Box 3893. ***74 Duane Street, New York.***

AN ANCIENT INSTRUMENT.

The needle is one of the most ancient instruments of which we have any record. The modern needle is a pointed instrument having an eye, and is used for carrying a thread, some kind of fabric or other material. It is probable, however, that the needles of those people who lived in very ancient times had no eyes, as instruments of bone, which were most likely used for that purpose, are found in the caves that were inhabited by ancient people of France, and the needles of ancient Egypt, which are described as being of bronze, do not appear to have been made with eyes. Some writers are of opinion that in place of the eye a circular depression was made in or near the blunt end, in which the thread was buried. Pliny describes the needles of bronze which were used by the Greeks and Romans. These instruments have also been found in the ruins of Herculaneum. The first account that history gives of the manufacture of needles is that they were made at Nuremburg in 1760, and while the date of their first manufacture in England is in doubt it is said to have commenced in that country about 1543 or 1545; and it is asserted that the art was practiced by a Spanish negro or native of India, who died without disclosing the secret of his process. During the reign of Queen Elizabeth this industry was revived and has been continued ever since. Christopher Greening and a Mr Damer established needle factories at Long Crendon, near Redditch, in England, in 1650, and these were followed by other London needle makers. Redditch is still the centre of needle manufacture. The eyes of the earliest needles were square. Many unsuccessful attempts were made to bring out the so-called "drill-eyed" needles before they were finally introduced in 1826 Two years later the burnishing machine, in which the eyes of needles are polished, was completed. In this machine the needles are strung on a steel wire, which is caused to revolve rapidly, and thereby impart a beautiful finish to the eye. The process of hardening needles was for many years accomplished by casting them, while red hot, into cold water. By this means a large proportion of them became crooked, and the services of a large number of workmen were required to straighten them. In 1840 the substitution of oil in the place of water took place, and this caused a large number of the workmen to be thrown out of employment. A riot took place at Redditch, and the introducer of the oil process was driven out of the town. The machinery for making needles has now been brought to such a perfection that, from the coil of steel wire to the finished needle, the machines used perform their various operations in a manner that may be said to be almost automatic.—*Hardware.*

To remove grease spots from books, scrape some French chalk, or take some powdered whiting, lay as much on the grease spot, both sides of the paper, as will cover it. Then press a moderately hot flatiron on the spot, covering the powder with a small piece of blotting or common brown paper. The heat will dissolve the grease and mix itself with the chalk. If it does not come out the first time repeat the process.

TRADE MARKS.

A meeting of prominent merchants using trade marks in the sale of their goods was held on last Friday for the purpose of giving expression to the feelings of members upon the State law regarding trade marks as it now stands, and to determine the future action of the Association in regard to a United States trade mark statute. Francis Forbes referred to the fact that a new trade mark statute is desirable, but will not be attained for some time unless a united effort is made. "A defective codification of a State trade mark law," he said, "is before the Legislature. This will pass unless some opposition is made by us." A resolution has been introduced into Congress looking to the abolition of registration in the Patent Office. G. A. Laridon said that the Belgian Consul had informed him that unless certain Belgian manufacturers were protected by a satisfactory trade mark law protecting their goods, they would not atttempt to exhibit goods at the World's Fair of 1883. John Matthews, of Twenty-sixth street and First avenue, sent word that there was not in the proposed trade mark laws any provision for the protection of show cards or other symbols not attached to goods themselves. He says that beyond a doubt his signs are exhibited in windows while the dealer is using other manufacturers' goods. This has got to be, Mr. Matthews says, a most flagrant abuse, and calls for action to prevent the fraud. A copy of the English *Trade Mark Journal* was submitted. It was advised that government action be taken toward the establishment of a similar journal in this country, wherein cuts of trade marks are to be given.

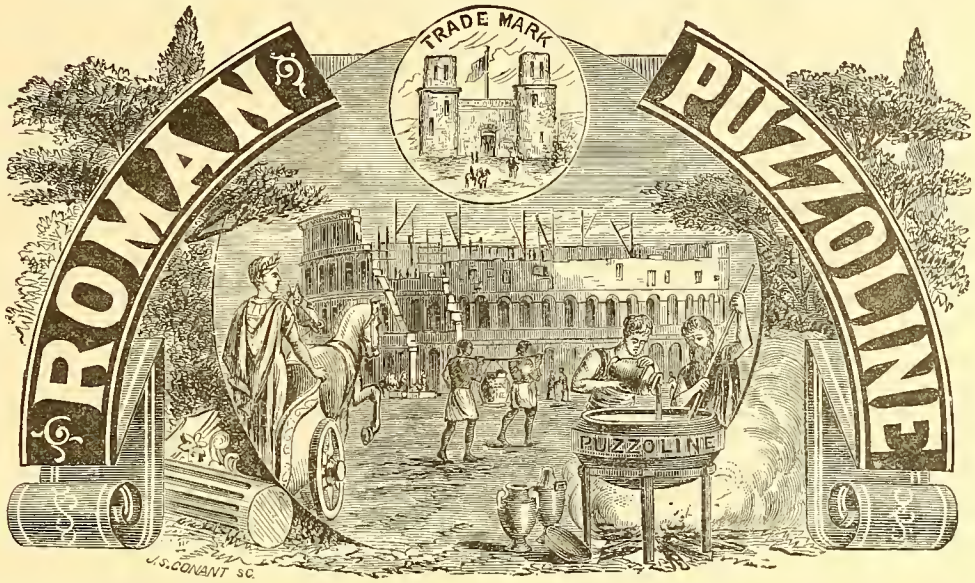
The Cement of the Ancients.

UNEXCELLED FOR STRENGTH AND DURABILITY!

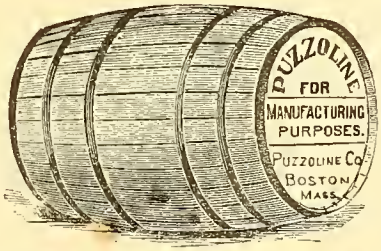
☞ CAUTION.—Manufacturers or others using adhesives of any kind are invited to examine into the merits of the above before purchasing, as none are genuine without the Trade-Mark, a castle, blown into the bottle.



☞ CAUTION.—Manufacturers or others using adhesives of any kind are invited to examine into the merits of the above before purchasing, as none are genuine without the Trade-Mark, a castle, blown into the bottle.

This new adhesive is a **liquid glue and cement combined,** and possesses greater strength and tenacity than any other known cement. It is composed of no injurious ingredients, **is entirely odorless,** and is **always ready** for use; no heat being required as with other adhesive compounds.

As a **Cement** in repairing **Crockery, Glassware** and **broken Ornaments** of all kinds, it is **unequaled.** It will stand the test of boiling water as no other adhesive will. As a **Glue** it is not affected by heat or moisture, and will hold more firmly than any other known preparation



CIMITOLINE.

A MUCILAGE.

Its action is quicker, it is not affected by moisture, will not sour, mold, or dry up in any climate, and does not wrinkle the paper, as is the case with mucilage now in general use.

THE PAPER TRADE IN THE CITY OF NEW YORK.

[Continued.]

Coes S. Buchanan had been for a number of years engaged in the paper trade of this city, when, in 1863, he employed George F. Perkins as clerk. At this time he was doing only a moderate business, and had desk room in the store of James T. Derrickson, at 30 Beekman street, now occupied by Clement & Stockwell. His business consisted mainly in selling news papers, but he also did something in book papers and in manufacturers' supplies. Mr. Buchanan, in addition to his business, owned the right for this country of Mellier's patent for making news paper from straw. He sold rights to several parties at different times, and finally, in 1864, sold the patent to the American Wood Paper Company, reserving, however, rights for the old "Pioneer" mill at Ballston, N. Y., and for the Schuylerville mill, at Schuylerville, in both of which he was at that time interested. The amount he received—something like $100,000—was a pretty good price for those days. The processes covered by this patent are, with various modifications and improvements, still used by the American Wood Paper Company. The Pioneer and Schuylerville mills were at the time given engaged exclusively in making white paper from straw, which was then comparatively a new thing in this country.

Although impracticable just now, the writer hopes at some future time to give a complete history of Mr. Buchanan's connection with the introduction of the manufacture of straw printing paper into this country.

Shortly after Mr. Perkins entered his employ, Mr. Buchanan removed to 43 Dey street, and there in January, 1865, the firm of Buchanan, Perkins & Goodwin was formed, Mr. Buchanan being the capitalist of the concern. The firm continued in the same lines of business that Mr. Buchanan had previously followed, but widened and extended them. A part of its business consisted in furnishing paper to the daily journals, and most of the great newspapers of this city were at different times among its customers. It may be remarked in passing that the quality of paper used in serving up the news fifteen years ago was greatly inferior to that in use now; yet it was considered pretty good in its day.

The firm remained in Dey street until 1867, and then it removed to 5 College place. In the fall of 1871 it changed to 84 Duane street, its present location.

In October, 1869, Mr. Buchanan's health having become bad, his interest in the business was purchased by his partners, and the firm name was then changed to Perkins & Goodwin. Mr. Buchanan is still living, but his bodily health is very feeble. He resides at Tarrytown, on the Hudson.

That Perkins & Goodwin have prospered everybody knows, and no one in the trade will deny that their prosperity is well deserved or refuse to congratulate them thereon.

George F. Perkins was born in Andover, Conn., in 1835, and brought up in Lee, Mass., whither his parents removed while he was a little boy. His father was a member of the firm of Turner & Perkins, machinists, of Lee, Mass. Young Perkins learned the machinist's trade in his father's shop, and before he had served out his apprenticeship was intrusted with the building and putting up of two paper machines for the mill of Tompkins & Bullis at Chatham Centre, N. Y. He afterwards went into the dry goods business in Lee, Mass., but about a year later gave it up, coming to this city, where he ob-

tained a situation in the paper warehouse of H. C. & M. Hulbert, which was then in its infancy. He left the Hulberts to go with Buchanan on November 20, 1863. Mr. Perkins has dignified yet affable manners and a thoroughly pleasing personal appearance.

Edward Goodwin, Jr., is a native of Hartford, Conn. Soon after he grew up he became engaged in manufacturing paper in a mill at Burnside, Conn., in which he was interested. He came to New York in the fall of 1864 and entered as a salesman into the employ of Mr. Buchanan, with the understanding that the firm of Buchanan, Perkins & Goodwin was to be formed on the 1st of January, 1865. Mr. Goodwin is genial in manner and appearance, and his pleasant smile and frank and good humored speech remind one not a little of the Cheeryble Brothers.

The firm became Perkins, Goodwin & Co. by the admission, on January 1, 1881, of two of their young men—Frank Squire, who has had charge of the paper department and been with the firm about twelve years, and J. Fred Ackerman, who has been with the firm since the first year it came into existence. Both of these young gentlemen are promising business men. Mr. Ackerman holds an important office in the famous Thirteenth Regiment of Brooklyn.

The firm is selling agent for five or six paper mills, and it buys largely from others.

[To be Continued.]

THE ERIE AND CHICAGO LINE.

It was not long ago remarked that "the fast trains that run between Chicago and New York are of little benefit to the people of the Northwest, and especially to those who have to make connections via the Northwestern or Chicago, Milwaukee and St. Paul lines, as their trains arrive about one hour after the departure of the fast trains."

To obviate this the Erie and Chicago line has put on a through train of Pullman palace hotel cars (with family room in each car), leaving Chicago at 5:15 P. M., and running through without change, arriving in New York early the second morning, only a few hours later than the fast train which arrives there in the night.

Passengers by the Erie and Chicago line remain in the sleeper until morning, instead of being turned out at midnight to hunt a hotel in the dark.

The second class passengers by this line can truly say that they are second class only in name, for all the accommodations are on first class trains.

The people of the West and Northwest should remember that this is the only line running Pullman palace hotel cars to New York without change, to connect with the trains from the Northwest that reach Chicago in the afternoon.

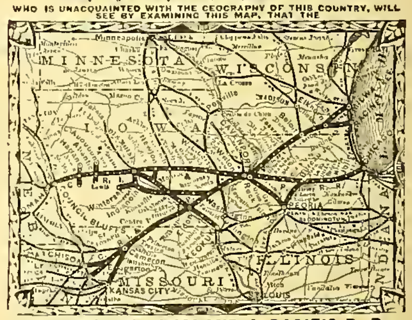
A MAN

WHO IS UNACQUAINTED WITH THE GEOGRAPHY OF THIS COUNTRY, WILL SEE BY EXAMINING THIS MAP, THAT THE



CHICAGO, ROCK ISLAND & PACIFIC R. R.

IS THE GREAT CONNECTING LINK BETWEEN THE EAST & THE WEST!

Its main line runs from Chicago to Council Bluffs, passing through Joliet, Ottawa, La Salle, Geneseo, Moline, Rock Island, Davenport, West Liberty, Iowa City, Marengo, Brooklyn, Grinnell, Des Moines (the capital of Iowa), Stuart, Atlantic, and Avoca; with branches from Bureau Junction to Peoria; Wilton Junction to Muscatine, Washington, Fairfield, Eldon, Belknap, Centreville, Princeton, Trenton, Gallatin, Cameron, Leavenworth, Atchison, and Kansas City; Washington to Sigourney, Oskaloosa, and Knoxville; Keokuk to Farmington, Bonaparte, Bentonsport, Independent, Eldon, Ottumwa, Eddyville, Oskaloosa, Pella, Monroe, and Des Moines; Newton to Monroe; Des Moines to Indianola and Winterset; Atlantic to Lewis and Audubon; and Avoca to Harlan. This is positively the only railroad, which owns and operates a through line from Chicago into the State of Kansas.

Through Express Passenger Trains, with Pullman Palace Cars attached, are run each way daily between CHICAGO and PEORIA, KANSAS CITY, COUNCIL BLUFFS, LEAVENWORTH and ATCHISON. Through cars are also run between Milwaukee and Kansas City, via the "Milwaukee and Rock Island Short Line."

The "Great Rock Island" is magnificently equipped. Its road bed is simply perfect, and its track is laid with steel rails.

What will please you most will be the pleasure of enjoying your meals, while passing over the beautiful prairies of Illinois and Iowa, in one of our magnificent Dining Cars that accompany all Through Express Trains. You get an entire meal, as good as is served in any first-class hotel, for seventy-five cents.

Appreciating the fact that a majority of the people prefer separate apartments for different purposes (and the immense passenger business of this line warranting it), we are pleased to announce that this Company runs Pullman Palace Sleeping Cars for sleeping purposes, and Palace Dining Cars for eating purposes only. One other great feature of our Palace Cars is a SMOKING SALOON where you can enjoy your "Havana" at all hours of the day.

Magnificent Iron Bridges span the Mississippi and Missouri rivers at all points crossed by this line, and transfers are avoided at Council Bluffs, Kansas City, Leavenworth, and Atchison, connections being made in Union Depots.

THE PRINCIPAL R. R. CONNECTIONS OF THIS GREAT THROUGH LINE ARE AS FOLLOWS:

At CHICAGO, with all diverging lines for the East and South.
At ENGLEWOOD, with the L. S. & M. S., and P., Ft. W. & C. R. Rds.
At WASHINGTON HEIGHTS, with P., C. & St. L. R. R.
At LA SALLE, with Ill. Cent. R. R.
At PEORIA, with P. P. & J.; P. D. & E.; I. B. & W.; Ill. Mid.; and T. P. & W. Rds.
At ROCK ISLAND, with "Milwaukee & Rock Island Short Line," and Rock Isl'd & Peo. Rds.
At DAVENPORT, with the Davenport Division C. M. & St. P. R. R.
At WEST LIBERTY, with the B., C. R. & N. R. R.
At GRINNELL, with Central Iowa R. R.
At DES MOINES, with D. M. & F. D. R. R.
At COUNCIL BLUFFS, with Union Pacific R. R.
At OMAHA, with B. & Mo. R. R. R. in Neb.
At COLUMBUS JUNCTION, with B., C. R. & N. R. R.
At OTTUMWA, with Central Iowa R. R., W., St. L. & Pac., and C. B. & Q. R. Rds.
At KEOKUK, with Tol., Peo. & War.; Wab., St. Louis & Pac., and St. L., Keo. & N.-W. R. Rds.
At CAMERON, with H. St. J. R. R.
At ATCHISON, with Atch., Topeka & Santa Fe; Atch. & Neb. and Cen. Br. U. P. R. Rds.
At LEAVENWORTH, with Kan. Pac., and Kan. Cent. R. Rds.
At KANSAS CITY, with all lines for the West and Southwest.

PULLMAN PALACE CARS are run through to PEORIA, DES MOINES, COUNCIL BLUFFS, KANSAS CITY, ATCHISON, and LEAVENWORTH.

Tickets via this Line, known as the "Great Rock Island Route," are sold by all Ticket Agents in the United States and Canada.

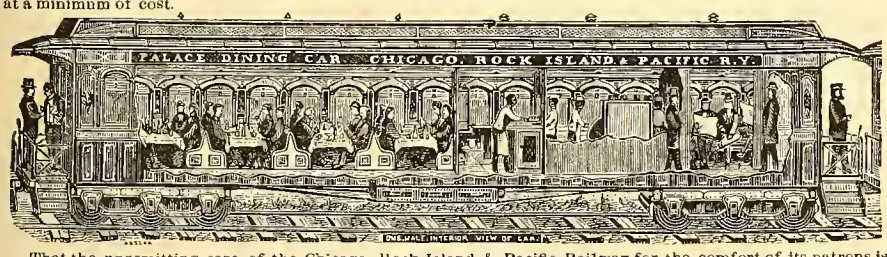
"THE GREAT ROCK ISLAND ROUTE"

Calls your attention to the following REASONS WHY, if about to make a Journey to the GREAT WEST, you should travel over it:

As nearly absolute safety as is possible to be attained. Direct connections in UNION DEPOTS, at all important points. No change of cars between CHICAGO, KANSAS CITY, LEAVENWORTH, ATCHISON or COUNCIL BLUFFS. Quick journeys because carried on Fast Express Trains. Day cars that are not only artistically decorated, but furnished with seats that admit of ease and comfort. Sleeping cars that permit quiet rest in home-like beds. Dining cars that are used only for eating purposes, and in which the best of meals are served for the reasonable sum of seventy-five cents each. A journey that furnishes the finest views of the fertile farms and pretty cities of Illinois, Iowa and Missouri, and is afterwards remembered as one of the pleasant incidents of life. You arrive at destination rested, not weary; clean, not dirty; calm, not angry. In brief, you get the maximum of comfort at a minimum of cost.



That the unremitting care of the Chicago, Rock Island & Pacific Railway for the comfort of its patrons is appreciated, is attested by its constantly increasing business, and the fact that it is the favorite route with delegates and visitors to the great assemblages, political, religious, educational and benevolent, that assemble from time to time in the great cities of the United States, as well as tourists who seek the pleasantest lines of travel while *en route* to behold the wonderful scenes of Colorado, the Yellowstone and Yosemite. To accommodate those who desire to visit Colorado for health, pleasure or business, in the most auspicious time of the year, the Summer season and months of September and October, the Company every year puts on sale, May 1st, at all coupon ticket offices in the United States and Canadas, round trip tickets to

DENVER, COLORADO SPRINGS AND PUEBLO,

At reduced rates, good returning, until October 31st. Also to San Francisco, for parties of ten or more, good for ninety days, at great reduction from regular fares.

REMEMBER, this is the most direct route for all points WEST and SOUTHWEST. For further information, time-tables, maps or folders, call upon or address

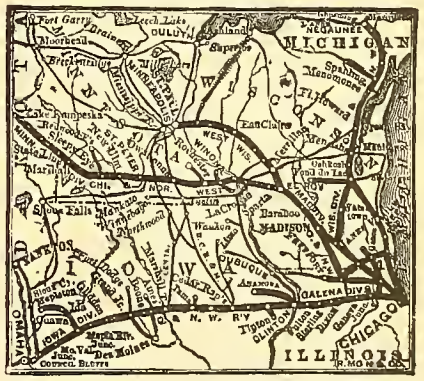
C AND N-W RAILWAY

The Chicago & Northwestern Railway

Is the oldest, best constructed, best equipped, and hence the most reliable railway corporation of the West. It is to-day the

Leading Railway of the West and Northwest.

It embraces under one management 2,380 miles of road, and embraces the following Trunk Lines:
"Chicago, Council Bluffs & California Line,"
"Chicago, Sioux City & Yankton Line,"
"Chicago, Clinton, Dubuque & La Crosse Line,"
"Chicago, Freeport & Dubuque Line,"
"Chicago, La Crosse, Winona & Minnesota Line,"
"Chicago, St. Paul & Minneapolis Line,"
"Chicago, Milwaukee & Lake Superior Line,"
"Chicago, Green Bay & Marquette Line."



MAP OF THE CHICAGO AND NORTHWESTERN RAILWAY.

The popularity of these lines is steadily increasing, and passengers should consult their interests by purchasing tickets via this line.

Tickets over this route are sold by all coupon ticket agents in the United States and Canadas.

For information, folders, maps, &c., not obtainable at Home Ticket Office, address any agent of the company, or

W. H. STENNETT,
Gen'l Passenger Agent,

BYRON WESTON

DALTON, MASS.,

HAS BEEN AWARDED THE

GRAND PRIZE GOLD MEDAL

AND RECOMMENDED THE

Medal of Honor and Perfection

At PARIS, 1878,

This being the **HIGHEST and ONLY AWARD** given for

LINEN RECORD and LEDGER PAPER.

—A SPECIALTY.—

THIS Paper has received THE HIGHEST PREMIUM over all others from *the Cincinnati Industrial Exhibition, Massachusetts Charitable Mechanics' Association, Franklin Institute* of Philadelphia, Louisville Exposition, Medal and diploma from *United States Centennial Commission, Medal of Progress American Institute, 1877, and Medal of Improvement and Progress, Boston, 1878.* Its

PRINCIPAL ADVANTAGES

are as follows:—1. It contains more LINEN than any other Ledger Paper, has a longer fibre, and is, consequently, tougher. 2. Having a harder and better body, it frays less in erasure, so that by simply using the rubber after the eraser, the ink is prevented from spreading. 3. It is more uniform in Weight Color and Finish. 4. It never cockles if properly bound. 5. Its chemical action upon ink is such that it both writes and rules up better. For proof of the foregoing, refer to a large number of Stationers, Bookbinders, Bookkeepers, and Recorders, who have given it, after a severe test, the preference over all others. This paper is *Double Sized*, and will stand any climate or the most acid of fluid inks.

☞ **Send for sample sheet, ERASE and REWRITE FOUR TIMES on same spot.**

Each sheet is water-marked with name and date.

Correspondence.

BOSTON NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

BOSTON, Mass., February 7, 1881.

Dealers in stationery report a good trade during the past week, the rise in the barometer having tended to bring buyers to the city. Country merchants, however, report a very dull trade during the recent cold snap, which seems to have paralyzed almost everything. With a decided "thaw," it is believed that trade would take a fresh start. It is time for the spring trade to get in, anyway.

A Bromfield street house supplies most of the cards and small chromos to collectors and to those dealers who advertise to send so many cards, &c., for a certain sum of money. The American chromo-lithograph products are the cheapest of the cards in the market, selling at $1.25 per 1,000. These cost nine cents per 100, and a nice assortment—ten or fifteen in a set—is sent by mail for ten cents, and yields the advertisers a good profit.

The cheapest foreign cards are the German. They are done in red and tint background, and sell for $2 per 1,000. French (as well as German) manufacture sell as high as $3 per 100. Splendid work is now put into these small French card chromos.

Of course, the sales of these cards are immense. Now that boys cannot collect these cards from the shopkeepers as easily as they did formerly, the business is larger than it ever was. Advertisements of different dealers in cards are becoming common in the popular daily newspapers. In the issue of one paper the other day there were no less than sixty advertisements of different dealers, most of them principally from outlying towns and cities in Massachusetts. Some of these advertisers send really good cards, many of them indifferent, and some don't send any—and the cards embrace every imaginable subject.

The leading dealers here in cards exchange with collectors and thus assist each other in enlarging their collections. There are generally from three to thirty cards in a "set," as advertised by the collectors. The greater number are set for the small price, the quality of the cards being poor, while the fewer number of cards cost twenty-five cents and upward. One collector who advertises extensively, has been known to have from six hundred to seven hundred letters in a single day.

Notwithstanding Prang, Bufford, Forbes and other American manufacturers, whose work is equal to the best in the world, large dealers in cards say they are in no way dependent upon home for cards, but send direct to Europe for them. And the business has its eccentricities. It is stated that a Chicago house has sent enough cards to Lynn, Mass. (right under Boston's nose), to cover all the fences in that city.

It is estimated that there are now about 2,600 varieties of cards. Card scrap-books are the craze just now, especially in the country towns of New England. No doubt these cards have an educating influence upon children, even if they do look shoppy, with the name of some dealer in soap printed across the sky of some fine sea view.

Benjamin Loring, who died in 1852 and left property valued at $700,000, was one of the merchants of the period of fifty years ago who assisted in giving character to commercial Boston. He was of the firm B. Loring & Co. (John Hooper), stationers, 122 State street. The firm is now Hooper, Lewis & Co., Milk street, and the concern is one of the most frequented and best appointed in town.

Boston's first directory was printed ninety-two years ago, on dirty brown paper. It was regarded in those days as a marvel of typography.

The father of Alex. Williams, who keeps the "Old Corner" bookstore, corner of Washington and School streets, used to keep with his brother, the firm being R. P. & C. Williams, a book and stationery store in the old Joy's Building, Washington street, nearly opposite State street, which is about to be abolished. Joy's Building is one of the old landmarks of the "Hub." Elder New York merchants may remember the old Cornhill coffee house, managed so many years by "Uncle" Fenno and his wife. That was near Joy's. Boston has not had such a popular lunch house since Fenno passed away.

A walk among the leading stationers has found a good feeling prevalent, although there are no special features of trade to note. There have been the customary calls from the ubiquitous, inevitable, and gentlemanly and persuasive agents of New York houses, who always have something new to offer. Boston dealers report a good trade at Chicago and further West. L.

BALTIMORE NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

BALTIMORE, Md., February 8, 1881.

Next Monday will be St. Valentine's Day, and love-sick swains and sentimental maidens are already out in force inspecting the stocks in the various book and stationery stores. The illuminated cards of the present time are more in demand than the lace and tinsel designs of old, and the abominable caricatures so much in vogue a few years among maid servants and festive youths with bell-bottomed pants are fortunately growing fewer and fewer as the seasons pass by. The stocks in all the houses are large and well assorted, sales are considerably earlier than usual, and all the dealers whom I have seen predict a good business before the 14th.

The general book and stationery trade is a trifle better than when I last wrote you, although the snow, which again covers the thoroughfares, has in a measure kept things back.

Borst & Co. have gotten into their new building and arranged their stock in a very neat and attractive manner.

The Baltimore and Ohio Railroad Company gave out a contract a few days ago of letter presses, and the job was secured by one of our Baltimore stationers.

A Baltimore Business Directory, with an illuminated cover, the first page of which bears handsome pictures of Baltimore in 1730 and Baltimore in 1881, and the last an attractive illustration of the City Hall, has just been issued. It was turned out for Webb Brothers, of New York, and Guggenheimer & Weil, of this city, and is, in all respects, a most creditable piece of work. The Directory is intended for the benefit of strangers, and will be largely sent out by our merchants.

A branch of Gray's Ferry Printing Ink Works, Philadelphia, has been opened at 66 Sharp street, by C. E. Robinson & Brother, and it already meets with gratifying encouragement.

Among the representatives of the trade who have been here during the past few days were: Charles W. Brown, of the Dixon Crucible Company, Jersey City, N. J., and John J. Farrell, of Lawrence Kehoe's; John D. Wheeler, of Brown & Sanson's; J. E. Zender, of James D. Whitmore & Co., and J. Aikenhead, all of New York.

W. P. M.

CHICAGO NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

CHICAGO, Ill., February 7, 1881.

The stationery trade, both here and throughout the West generally, promises to be excellent and permanent through the season. Reports from all of the dealers confirm this statement; although, among binders' stocks, the shoe trade buying largely of heavy skivers has somewhat stiffened the prices of these. The cold weather also has temporarily rendered bark leathers and sheep a little scarcer. For the rest, prices are firm and the demand steady.

Among items of interest during the past week

I may notice the change in name of the old Cleveland Paper Company, which is to be known hereafter as Geo. H. Taylor & Co. The change, as I understand, is principally in name, with Geo. H. Taylor as president, W. H. Longley treasurer, and H. M. Knickerbocker secretary.

During the past week also two wanderers have returned to Chicago, rendering a good report. Mr. Adams, of Adams & Kimball, Western representatives of the Readers and Writers Economy Company, after a four weeks' absence in the East; and H. A. Taylor, Western representative of the "Livermore New Stylographic Pen," from an extended trip through Missouri, Kansas, Nebraska and Iowa. The latter gentleman reports the outlook for the general stationery trade as "very promising," dealers everywhere expressing a feeling of confidence in a good spring trade, and making provision for the same by a corresponding liberal purchase of a variety of fine staple goods and choice novelties. He quotes his sales of the pen as highly gratifying, dealers who have handled it before testifying to the general satisfaction given; while "many of the best stationers in the West sell exclusively 'The Livermore.'"

In the new Chicago firm of Brown & Kelly, your readers will recognize T. H. Brown, Jr., recently with J. D. Whitmore & Co., New York, and J. B. Kelly, long known in connection with Culver, Page & Hoyne, of our city. They are to occupy next month Nos. 194 and 196 Dearborn street. Their business is to include general stationery, printing and blank books.

George E. Marshall, retail stationer, announces his removal from Nos. 161 and 163 to No. 167 Madison street, four doors above his old location.

G. B. H.

GEORGIA NOTES.

[CORRESPONDENCE OF THE STATIONER.]

AUGUSTA, Ga., February 2, 1881.

The visitor to Augusta is puzzled at finding a placard on every store door reading: "Open; walk in."

The weather has been very severe, not alone a heavy rain, but severe cold having been one of the inflictions placed upon the people of this region. The cold weather has obliged all shopkeepers to close their doors, and as the country people are not used to seeing the front doors closed they imagine the store is closed; hence the placards above mentioned.

W. T. Richards & Son reported only a fair holiday trade, and since Christmas nothing at all. The rainy weather has been so prolonged that very few country people could come to the city. Usually, during the month of January a very fine business is done; but it has been lost this year, and they do not think it will be regained.

A. F. Pendleton reported a good holiday trade, but would have been much better if the weather had been fine. Standard and fine works of literature sold better than juveniles. He says the best selling book was Doré's Bible Gallery—Cassell, Petter, Galpin & Co., publishers. I noticed a large number of juveniles on hand, all the publishers being represented.

George A. Oates reported a good sale of Christmas and New Year cards. Fine stationery was in good demaud; in fact, I find all dealers report sales of fine goods, whereas the commoner grades hung fire.

James L. Gow reported business fair, not as good as usual. He is devoting much of his time to his newspaper, which he says is a success.

During the year just passed two new firms have made their appearance. Pelot & Cole have been in the photographing business for about twenty years, and as an additional venture opened a store for framing pictures, sale of easels, frames, fancy goods, &c.; they have also a stationery counter. They had a large stock of fine leather goods and stationery, and report a very fine holiday trade, no goods, or very, very few, being left over. They think the undertaking a success and intend continuing.

The other new firm is W. T. Ness & Son. The father has been a shoemaker, and being an honest, saving German, he naturally accumulated something. He invested his savings in real estate, it consisting of two houses; these he mortgaged to give the son a start, who, having been clerk with Richards & Son for several years, has some knowledge of the business. I found upon examination a very small stock and business slow.

Exactly opposite is J. T. Buckley's. He started in the book and stationery business during the month of October, 1879, with a little or no capital. His wife had some $2,000 of her own and with generosity backed him up. He had no knowledge when he commenced the business; but has been remarkably successful and reports having done a very fine holiday business. He has accumulated much business knowledge, and in many instances buys goods at lower figures than others. He intends buying a finer class of literature than heretofore, as he says there is a demand for it. He reports a stock of goods worth $5,000 to $6,000, and only $500, owing, and that in book ready to meet demands.

The sale of Christmas and New Year cards has been very fine, several having duplicated their orders, and all sold out clean with none on hand. The valentine trade promises to be equally as fine, as good orders have been placed. One thing is especially noticeable in connection with the holiday trade in this city, and that is the poor sale toys have met with. One meets heavy stock on hand everywhere. The fine weather of the last few days has made merchants more hopeful, as fine weather is needed to allow farmers to plow and plant their cotton crop—the staple merchandise of the South.

LEONIDAS.

HINTS TO STATIONERS.

"Bring out your dead!" was the midnight cry at the time when the Great Plague was carrying despair to many a heart and desolation to many a home. Responding to the call, such people as had dead bodies in their houses opened their doors, that the grim officials might carry out the dead—for they could not. Just at this present time, the old blood-curdling cry might once again be revived, and hallooed into the ears of many a retail stationer. "Bring out your dead!"—the remains of more than one summer season's stock, and let them find their way to the burial ground of the third-rate fancy goods man. Why fill your shelves, drawers and counters with such a host of out-of-date manufactures? There is nothing gained by keeping clumsy old pocket-books, black and greasy with age; and old china ink-wells, with their tarnished nickel caps. On the contrary, you lose more every day than the things are worth, simply because, seeing nothing but fossilized fancies in your windows, the probable customer concludes he would but waste his time were he to walk inside to inspect your stock.

Depend upon it, the man who learns which is the right road to fortune, is the man who purchases his stock both wisely and well, and not he who rushes into all manner of big speculations, riding in the same rut, not daring or caring to strike out for himself.

We have known country stationers who, if they heard a certain article was having a run on public favor in London, would at once order tons of it, in order to supply the requirements of a little town of about five thousand inhabitants, instead of telling the traveler to send on a "dozen or so of this sort, and a dozen of that." They seem to lose sight of the fact that these runs are merely ephemeral; that a well selected stock is much better than a monopoly of one class of article; and that they stand a greater risk of losing good money by thus keeping "idle stock" than they would were they to make up their orders on the variety system. For instance, if a man were to fill his windows and counters with nothing but Eyre & Spottiswoode's albums in red plush, with Walker & Co.'s shilling packets of stationery, or even Waterston & Son's little "Pocket Jemmy," who would be attracted thereby? We can confidently answer, "No one!" On the other hand, suppose he ordered one of each series of the plush goods—albums, purses, portemonnaies, writing cases, papeteries, cigar and cigarette cases, &c.; a couple of packets of each class of note paper shown by Walker & Co., and a gross or so of the "Pocket Jemmy," see what an immense variety he would have, for pretty much the same amount of cash he would have spent on one thing. Here would be ample material for the window dressing, and a capital show could be made.

First and foremost, the groundwork of the display could be laid with a piece of oilcloth or lavender colored paper, cut to fit nicely all round. The larger class of plush goods should be arranged, with due respect to color or tint, in the bed of the window, the design worked out being semicircular, by which means a space would be left in the centre. Half a gross of the Jemmy could be taken off the cards and piled up in this central space, being flanked by a pyramid of filled cards. On the flank and back boards and brackets the smaller plush goods should be arranged in front of the note paper, which might conveniently be displayed in serrated fashion, after the pattern of a continuous door screen. Thus, with but three different classes of goods, a fine display might be made. But why stop at three? Wholesale houses will make you up small sets of any given line of fancy goods, so that you need not flounder about out of your depth with huge orders for any one line.

And now a few words as to the best way to entice customers.

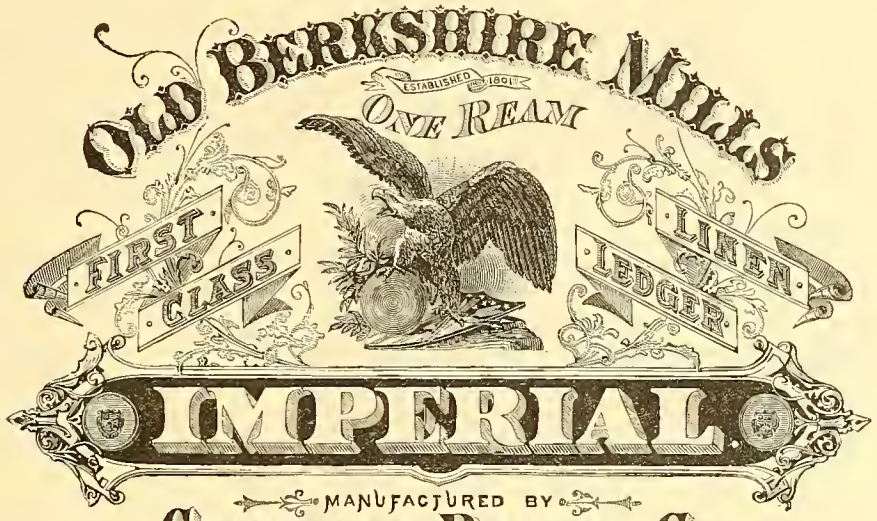
Don't crowd your window with goods; let there be just enough to give it a quiet, genteel appearance. Remember that what you cannot put in at one time will serve to attract attention later on. Don't leave one dressing in too long; it spoils the goods and deadens the interest of the public. It is a good plan to strip the window every Saturday morning, that being a time when there is likely to be least "chance-custom." Let every piece of leather goods be well "gone over" with the chamois cloth, and let every ornament in nickel and gilt be thoroughly cleaned up before it is replaced. In re-dressing, see that you "re-dress;" not merely put everything where you took it from; let there be some novelty about your display—it attracts the eye.

But above all, keep that old stock out of sight—it only hinders you from better trade. The accumulation of years, who will purchase it? Why, then, keep it to bar your progress? Look around you, and see what new things are coming out; make out a varied indent for these, using your discretionary powers as to what are best. Have a specialty if you like; consult us if you will; but don't forget to first "Bring out your dead."—*Paper and Print.*

OLD BERKSHIRE MILLS

DALTON, MASS., U. S. A.

One party writes: 'The two hundred RECORD BOOKS, for 83 of the 99 Counties, now on exhibition at the Iowa State Fair, at Des Moines; and all, but four (!) of them, made from your 'OLD BERKSHIRE MILLS LINEN LEDGER,' Medium, 40lb., make a splendid show."



[The above cut is a fac-simile of the wrapper used on the Linen Ledger Paper.]

We will pay for any book rejected on account of faulty paper. Send for Samples, test them in comparison, and see that your books are made from paper thus water-marked.

OLD BERKSHIRE MILLS

LINEN LEDGER PAPER

Will stand the severest test of COLOR, CLIMATE, INK OR WEAR.

Being **Triple Sized** (a process entirely our own) and **Loft Dried**, can be erased and written upon the fifth time distinctly. None genuine without the water-mark and date, thus—**Old Berkshire Mills Linen Ledger, 1880.**

CARSON & BROWN CO., Manufacturers.

CANAJOHARIE, N. Y. **JUVET & CO.,** CANAJOHARIE, N. Y.

—MANUFACTURERS OF—

Time Globes, Relative Time Globes, Tellurians, Celestial,

AND VARIOUS FORMS OF TERRESTRIAL GLOBES.

The **Time Globe**—see illustration—is not only a perfect geographical globe, but is also a time piece, each part working independent of the other and perfect in both. By means of internal mechanism the Globe is made to revolve once in twenty-four hours—as does the earth. **Universal Time** is obtained **without computation.** It is a **Stem Winder, regulates** from the **outside,** and runs four days without rewinding. Sizes, 6, 12, 18 and 30 inches. Prices $75 to $600, according to size and style of mounting.

The **Relative Time Globe,** while capable of performing **all** the problems of the ordinary **Globe,** gives in addition **Universal Time without computation.** Sizes, 6, 12, 18 and 30 inches, Prices, $35 to $300, according to size and style of mounting.

Tellurians, Celestial and **Terrestrial Globes,** so mounted (new designs) that no part of the map is hidden from view. Sizes, 6, 12, 18 and 30 inches. Prices, $3 to $250.

Above described Globes are **all** made of a new material, which, unlike the old plaster and clay Globes, will not fracture; in fact the shell is so strong and well made that it will be economy to recover in case of geographical changes or injury to the map.

All full Meridian Ring Globes are mounted with swiveled clutch, which allows them to be placed at any desired angle. None but the latest and most perfect maps used.

Meridian Rings are of **Brass,** and **carefully** graduated.

ALL ORDERS WILL RECEIVE PROMPT AND CAREFUL ATTENTION.

L. PRANG & CO.'S

Valentines for 1881.

We take pleasure in herewith presenting to the trade our Price List of Valentines for this Season:

ASSORTMENT.—Our Valentines are made up in sets of one dozen, except Series 1, where six constitute a set, and are put up in a box or envelope. Each set contains all the designs of the series; and as no series has more than six designs, each design is more or less repeated in the set.

ENVELOPES.—Fine Cream-Tinted Envelopes are furnished with every series, except Nos. 9, 11, 15, 16, 17, without extra charge.

VALENTINES WITH SILK FRINGES.—We would call especial attention to these, as they will doubtless prove very attractive. These goods are made up with the best quality heavy silk fringe, made expressly for us. All fringed Valentines are furnished with protectors and envelopes, and are put up with assorted colors of fringes.

LIST OF PRANG'S VALENTINES FOR 1881.

No. of Series.	No. of Designs.	DESCRIPTION.	HOW PUT UP.	Retail Price per set.

JOBBING STATIONERS

TAKE NOTICE !

The largest, finest and most complete Line of Manifold Order and Letter Books made in the world is manufactured by

SAMUEL HANO & Co.,

BOSTON, MASS.

NEW PROCESS OF ENGRAVING AND PRINTING.

COPPER PLATES vs. LITHOGRAPHY.

Advantages of this Process over Stone Work:

A CLEAR SHARP IMPRESSION—AS METAL IS HARDER THAN STONE.
THE PAPER RETAINS ITS GLOSS—NO DAMPING REQUIRED.
WE PERFORATE EVERY BLANK WE PRINT BY OUR ROTARY MACHINE.
OUR NEW DESIGNS ARE ALL ORIGINAL AND FINELY EXECUTED.
WE USE NOTHING BUT HEAVY TUB-SIZED FIRST-CLASS PAPER.
EACH BOOK IS STRONGLY BOUND AND EVERY HALF DOZEN PUT UP IN BOXES.
OUR PRICE IS MUCH LESS THAN LITHOGRAPHIC WORK.

NOTES, DRAFTS, RECEIPTS, ORDERS, CHECKS, &c., by the above Process, and also from STEEL PLATES.
Designed and Manufactured especially for Stationers.

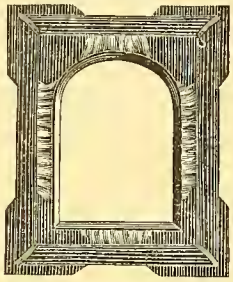
Trade Novelties.

[We will be glad to receive samples of all novelties issued in the trade, and will notice all such which possess merit free of charge. It is desirable to accompany descriptions with cuts whenever possible.]

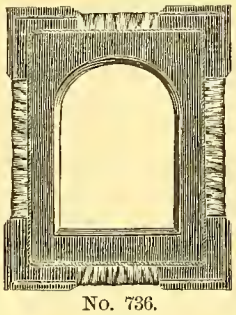
NEW PHOTO FRAMES.

Several new designs in photograph frames have been introduced by E. & H. T. Anthony & Co. Three of these are illustrated herewith.



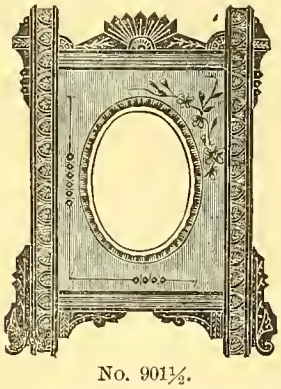
No. 864.

No. 864 is a velvet passe-partout, with Grecian corners, heavy velvet heads, satin puffings and a round topped opening. No. 901½ is also a velvet



No. 736.

frame, fitted with a nickel rim, and has Grecian corners, gilt satin heads, and satin puffings. No. 736 is an ebony frame, engraved in white and



No. 901½.

gold, and is fitted with a paper mat. It is decorated with hand-painted flowers, and has satin puffings around the opening.

How to Use Oil-Stones.—Instead of oil, which thickens and makes the stones dirty, a mixture of glycerine and alcohol is used by many. The proportions of the mixture vary according to the instrument operated upon. An article with a large surface, a razor, for instance, sharpens best with a limpid liquid, as three parts of glycerine to one of alcohol. For a graving tool, the cutting surface of which is very small, as is also the pressure exercised on the stone in sharpening, it is necessary to employ glycerine almost pure, with but two or three drops of alcohol.

READY FEBRUARY 1, 1881.

Four New Sets Folders, which for Elegance and Originality of Design will surpass everything heretofore done by us.

No. 20—6¼x8, 5 Designs.
No. 21—7¼x5⅝, 5 Designs.

PERFECTED STYLOGRAFIC.

The original and genuine Pen. Warranted the best made. Thirteen Patents granted to **A. T. CROSS,** the last, June 29, 1880, being the most important and giving the name **Perfected.** All cuts are exact size

MAXIMUM.—Holds most ink of any pen made; tires the hand less than smaller barrels. Fits Hambler's Pocket. Same price as Long.

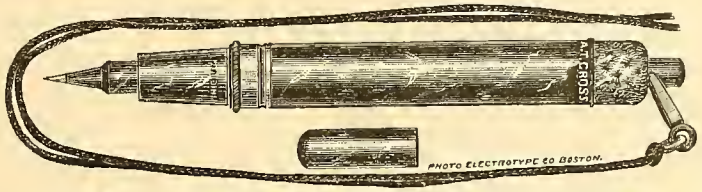
LONG.—The famous Desk Pen. Extra long. Holds most ink, except the **Maximum.**

SHORT.—Most widely known and sold heretofore; but Maximum is better for desk

or Hambler's Pocket, Giant for Vest Pocket or Cord. So this will be largely superseded.

Thirteen patents granted; seven more applied for; more genuine improvements; better record; more styles; larger stock; more thoroughly protected by patents than all rivals combined.

☞See Descriptive Circulars.



GIANT, with Cord and Gold Ring, same price as Short.

Dealers and agents supplied with wood, glass and paper signs, placards, circulars, leaflets and cuts. We make both largest and smallest Pens, both of which will have all new improvements.

☞See Descriptive Circulars

VEST GIANT, Plain, - - $2.50.

All Styles up to $4.00.

☞ **VEST GIANT.—The Cheapest PERFECTED Pen made.**

Trade Gossip.

All new goods and designs which are not, strictly speaking, "Novelties" will be noticed under this head. The trade are requested to forward descriptions with samples in order to secure proper notice.

J. H. Curtis shows several new and strikingly beautiful goods.

A. E. Seifert, publisher, Macon, Ga., is advertising to close out.

W. W. Miller, printer, Columbia, Tenn., has made an assignment.

Snow, Woodman & Co., printers, Worcester, Mass., have been burned out.

D. P. Cook, fancy goods dealer, Hartford, Conn., is offering to compromise.

A. Weidmann & Co. are having their new stores done up in magnificent style.

J. C. Bedingfield, fancy goods dealer, Kemptville, is reported to have left that town.

J. M. O'Loughlin, stationer, Montreal, P. Q., Can., has been burned out; partly insured.

Martineau & Desjardins, dealers in fancy goods, Quebec, Can., have dissolved partnership.

C. W. Papst, bookseller and stationer, Seaforth, Ont., Can., has had his stock damaged by water.

The Rockdale Paper Mill Company, paper manufacturer, Conyers, Ga., is advertising to close out.

M. Corrigan, stationer and bookseller, Lucknow, Ont., Can., has sold out his business to R. Clendenning, and formed a copartnership with John Peart.

W. Scott has retired from the firm of J. J. Duncan & Co., booksellers and stationers, Clarksburg, W. Va.

A. Colby's Sons, booksellers and stationers, Lowell, Mass., have dissolved partnership. J. S. & J. A. Colby succeed.

Veale & Case, manufacturers of paper barrels, New York city, have dissolved partnership. Alfred L. Case continues.

Chiswell & Wurts, publishers of the *Press*, Paterson, N. J., have dissolved partnership, and the business has been transferred to the *Press* Printing and Publishing Company.

Loeb & Brother have just finished a large line of novelties suitable for the season, and their representative will soon call on the trade with samples of them. Among the new goods added to the firm's line are several specialties which deserve careful inspection.

Henry Levy & Son are launching out this year more extensively than ever before, and say that the novelties they will offer during the spring and fall will completely surprise all who will see them. The trade should see the samples before placing their orders elsewhere.

The attention of the trade is invited to the advertisement, in another column, of J. H. Bufford's Sons. Among other things, it contains a notice of the removal of the firm's factory in Boston to Harrison Square. The building in which it is located was erected by the firm.

Myers Brothers are very busy with valentines and Easter cards. Orders for the former are daily accumulating, and the firm is making strenuous efforts to fill them in time. The house is bringing out new designs in cabinets, and is pushing matters rapidly in the staple stationery line.

The New York Silicate Book Slate Company, 191 Fulton street, manufactures an unrivaled article of silicate "Black Diamond" liquid slating for coating the surfaces of blackboards. This is just the thing required for every schoolroom where blackboards are in use. It can be applied with perfect success by any person who can handle an ordinary paint brush. It is put up in quantities to suit, and can be sent safely to any destination. Inquiries as to prices and other particulars cheerfully answered upon application to the sole manufacturers at the address above given.

Charles J. Cohen, Philadelphia, reports good trade. The envelope factory is working full time; prices are exceedingly low, and the superior quality of the goods produced under the now well known trade mark of the firm command a ready sale for all put on the market. Mr. Cohen has recently received a heavy shipment of French glazed copying papers and of white pelure papers, which he offers to the trade at lowest market rates, and will make special terms in case lots to large buyers.

Theodore V. Smith, formerly of the J. O. Smith Manufacturing Company, now represents William A. Haines, of Philadelphia, manufacturer of pocket books and other leather goods. Mr. Haines is to be congratulated that he has secured the services of a gentleman so long and so favorably known to the trade.

Harry R. Boss & Co., Chicago, have published a pamphlet on the "Use and Abuse of Abbreviations," with an alphabetical list of abbreviations which are in common use. The work is convenient and useful.

Emerick & Biggs, publishers of the *Plaindealer*, Galesburg, Ill., have admitted James A. Bryan to partnership, under the style of the *Plaindealer* Printing Company.

The firm of George H. Sanborn & Sons having been dissolved by the death of George H. Sanborn, Geo. E. & Herman L. Sanborn continue under the same style.

Charles Stewart, of Cincinnati, and Mr. Beiler, of Hall & Beiler, Sedalia, Mo., were among the visiting members of the trade in the city this week.

Anderson & Cameron, this city, have published their neat little pocket calendar for 1881. It is very handy to carry around.

Walnut & Marotte, wholesale dealers in fancy goods, Philadelphia, Pa., have dissolved partnership. Each continues alone.

Frank Harris, of the National Blank Book Company, will start this week for an extended trip through the South.

S. Gump, of S. & G. Gump, of San Francisco, and Mr. Wehle, of Cleveland, Ohio, were in town during the week.

A. H. Goetting has just introduced a new music roll, a new shelf folio and a new assortment of papeteries.

Elliott & Kohler, printers, Boston, Mass., have dissolved partnership. W. S. Kohler continues.

Hubbard Brothers, book publishers, Springfield, Mass., have removed to Boston, Mass.

Rowly & Ryan, booksellers and stationers, Galion, Ohio, have dissolved partnership.

Blanchard & Wilson, printers, Worcester, Mass., have been burned out. Insured.

John P. Fell, of Fell & Cook, dealers in paper hangings, Wilkesbarre, Pa., is dead.

Emanuel Loeb, lithographer, Cleveland, Ohio, has sold out to Johns & Co.

Robert Hill, paper stock dealer, Boston, Mass., is in insolvency.

D. L. Lowe, printer, Attleboro, Mass., has sold out to E. H. Sweet & Co.

John Sherrerd, printer, lithographer, &c., Philadelphia, Pa., is dead.

Mueller & Andries, publishers, Detroit, Mich., have dissolved partnership.

Mrs. M. E. Boas, dealer in notions, Tamaqua, Pa., is closing out at auction.

Jones & Armstrong, stationers, &c., Rome, N. Y., have been burned out.

Wales L. Egerton, paper box manufacturer, Boston, Mass., is in insolvency.

J. G. Darrah succeeds J. G. Darrah & Co., dealers in fancy goods, Waterville, Me.

H. C. F. Koch, dealer in fancy goods, this city, has changed to Henry C. F. Koch & Son.

R. M. Harrison, dealer in notions, Mount Union, Pa., has been closed by the sheriff.

James Butler, of Butler & Moorhouse, paper manufacturers, Philadelphia, Pa., is dead.

W. A. Rall & Co., dealers in notions, Belleville, Ill., have been sold out by the sheriff.

Geo. H. Longee, of Geo. H. Longee & Co., fancy goods dealers, Boston, Mass., is dead.

Gillett Brothers is the name of a new firm just starting in the stationery business at Chicago.

Elias Jessurun, dealer in paper stock, New York city, has had his stock damaged by fire.

C. D. Dawson has succeeded Lockwood & Dawson, publishers of the *Appeal*, Marysville, Cal.

Reynolds & Pierce, printers, Lafayette, Ind., have dissolved partnership. C. H. Pierce continues.

L. Lincoln & Co., paper manufacturers, North Dighton, Mass., have been burned out; partly insured.

Geo. Bixby, publisher of the *Owatonna Review*, Owatonna, Minn., has removed to Minneapolis, Minn.

J. Witmer, publisher of the *Reporter*, Lansdale, Pa., has sold out to A. K. Thomas and R. H. Andrews.

Levi & Bacon, booksellers and stationers, Pittsburg, Pa., have dissolved partnership. Frank Bacon continues.

Dennis & Robb, dealers in paper hangings, Baltimore, Md., have dissolved partnership. B. M. Dennis continues.

J. H. Butler & Co., publishers of school books, Philadelphia, Pa., have dissolved partnership. T. H. Butler & Co. succeed.

Keith Brothers & Musselman, printers and publishers, Quincy, Ill., have dissolved partnership. D. L. Musselman continues.

William Graham, of this city, met with quite a serious accident one day last week, by falling upon the ice on the street and breaking his right arm.

Joseph A. Hoffman, for a number of years with J. B. Lippincott & Co., Philadelphia, and later with A. Roman & Co., of San Francisco, has gone into business on his own name at the last named city. He is located at 210 Montgomery street, and will conduct a wholesale and retail book and stationery trade.

Philip Hake shows fifteen new and quite original designs in Easter cards, samples of which will be furnished by him on receipt of their cost. One very pretty conceit is in the shape of a vase with a wire stand, which serves the double purpose of holding it upright in position and as a receiver for a miniature bouguet Mr. Hake's business has increased so rapidly that he is seek-

ing to secure increased manufacturing facilities by the addition of several floors.

A. M. Lewis, dealer in law books, New York city, is dead.

Levien & Childs, printers and stationers, New York city, are closing out.

D. Hauser & Co., fancy goods dealers, Oakland, Cal., have dissolved partnership.

Henry Farrow, of the firm of Henry Farrow & Co., job printers, Mobile, Ala., is dead.

The *Journal* Publishing Company, Somersworth, N. H., has sold out to E. O. Lord & Co.

J. Wiggins, publisher of the *Union*, Wellsville, O., has changed his style to Wiggins & Young.

J. M. Skinner, publisher of the Atco (N. J.) *Argus*, has sold out to J. E. Watkins, of Morristown.

Cline & Caraway, booksellers and stationers, Ladoga, Ind., have sold out to Lemon & Pritchard.

John M. Graves & Co., wholesale dealers in notions, Chicago, Ill., have dissolved partnership by admitting E. C. Huling; style, Graves & Huling.

W. A. & C. S. Houghton, stationers and booksellers, Sacramento, Cal., are the subject of a notice in one of the papers of that city. The outline of their stock indicates that these gentlemen are well up to the times and that enterprise is not wanting. The business of the firm is said to be greatly extending.

The Eastern manufacturers of straw wrapping paper met at Stanwix Hall, Albany, on Tuesday, and took no further action beyond confirming their schedule of prices adopted last month and resolving to adhere to them strictly. There are various rumors afloat of cutting in prices, but none of them have been traced to any truthful foundation. It is said to be quite a common thing for the commission dealers to charge this upon one another, but none of them give any proof of specific cases.

On January 18 the store of Hamilton & Rockfellow, stationers, &c., Deadwood, D. T., was burned with its entire contents. Half of the firm's stock was saved by being stored in a brick fire-proof building in the rear of the business house. The building will be rebuilt of brick and fire-proof as to external disasters of the same character. The fire caught from an adjoining store, which was burned down. Mr. Hamilton will be in New York next week. The firm says thet it cannot do without THE STATIONER, even if it is burned out.

George A. Raisbeck has just returned from a Westeru trip of several weeks' duration. Mr. Raisbeck, as usual, took quite a goodly number of orders, and says the outlook for the spring is very promising at every point he visited. Chas. S. Plummer is on the road, and was doing well when last heard from, and the same can be said of Charles S. Wright, the latest accession to Wm. Hake's list of salesmeu. It is said of the latter that he is doing much better than was expected of him, and that some of the older salesmen had better look to their laurels.

L. Prang & Co.'s valentine cards have met with a very large sale. Descriptions of these cards have been given in THE STATIONER, but description fails to give an adequate idea of their beauty. They have many new features of design and coloring and in some respects are by far the handsomest thing in the presentation card line that the house has ever got. This is said after an inspection of samples. The firm says that its aim has been to "offer to the public not only the best artistic taste and execution, but refined and pure sentiment." It has succeeded.

NEW GOODS! NEW GOODS!

MANUFACTURED AND JUST OFFERED TO THE TRADE BY

ACME STATIONERY AND PAPER CO.,

Nos. 117 Fulton and 52 Ann Streets, New York.

LAWYERS' BRIEF BOOKS.—(Copyrighted December, 1880.)

Made of our best Manilla paper in four sizes, bound in heavy paper covers, with an index printed on one side, and a filing blank on the other, so as to fold like a Lawyer's Brief. These have been highly approved by many prominent lawyers as meeting a want long felt by the profession, and will find a ready sale when brought to their attention.

THE STATIONER.

DEVOTED TO THE INTERESTS OF THE

Stationery and Fancy Goods Trades.

WEEKLY---$2.00 PER ANNUM.

Single Copies - - - - 10 Cents

NEW YORK, THURSDAY, FEBRUARY 10, 1881.

Advertisements cannot be received for insertion in the current week later than 12 M. on Wednesday. The charge for advertising is 25 cents a line, each insertion. Special terms for standing and displayed advertisements to be had on application.

This journal aims to be a medium of information for and a representative of the interests of every one connected with the stationery and fancy goods trades. It contains a full and trustworthy survey of the market for stationery in this country, in all cases giving the actual prices at which goods can be bought of importers and jobbers in this city, together with a detailed account of novelties in the trade, patents relating to stationery, and current items of interest. A review of foreign markets and accounts of movements abroad will also be furnished, and no pains will be spared to make THE STATIONER a thorough and complete exponent of the trade.

Subscription and postage for Great Britain, per annum..... ..... 12s.

Any information our readers may wish to obtain shall be cheerfully given, and prompt replies will be made to all inquiries addressed to us on any subjects of interest to the trade.

Communications on all trade matters are earnestly solicited. Address

Subscribers to THE STATIONER can be supplied with the best cloth binder in the market. Deliverable at the publication office. Price, fifty cents.

Readers of this paper who avail themselves of the information obtained from its columns, by advertisement or otherwise, are requested to notify their correspondents of the source of their information.

Now comes the commercial traveler to the fore. We print a view of the license tax question as taken by a gentleman very well known in the trade and who belongs to the fraternity which does so many naughty things.

EVERY discussion of the license question is of value. Points which affect all interests are brought out and facts are stated and suggestions made. which will set people to thinking what is best to be done about it. The statement of how wrongs are inflicted upon business men, whether in one way or another, legally or illegally, cannot but be useful and interesting. Our columns are open to argument and objection, statement and counter statement, and disputation generally, as long as the thing is conducted sensibly and properly. We are now having an experience meeting. Let us have a protracted one.

BUT now we come to the stirring up. A gentleman well known to stationers, and who is a member of the Board of Trade, sends us word to "stir up" that ponderous organization and to ask and keep on asking it to take up this license issue and do something. He says that the Board seems to think that its beginning and ending is to do the commercial agency business we have before spoken of and not to do even that very well. Certainly. We cannot force the Board to do anything, and would not if we could; but standing between it and the trade, we have the right to declare and represent the sentiment which animates the latter and to ask the former to exercise a right, perform a function and discharge a duty which belongs to it if it is what it claims to be. We know that there is a great deal of dissatisfaction in the trade because there is so little done by the Board of Trade to raise it above the suspicion of being a clique—working only for special purposes, selfish in its action and not catholic in its labor. We know that many—by far the larger number—of the members of the Board of Trade have the best intentions and admit the important relation which they bear to the stationery trade when they assume the representative position which they assert is held by the Board. They are not indifferent to the issues which concern the trade; but—and in that "but" there is all of it. They fail, they weaken; they shun the trouble, care and responsibility. They might as well be retail stationers in little shops on side avenues selling paper and things by the penny's worth.

STOP THIEF! Warning is given to the trade that the birds of prey are again going the rounds. Their fancy yet inclines to pens as being easily portable, quickly put out of sight, and sometimes of doubtful identification. It is best to keep your eyes open at all times; but you must be particularly wide awake just now. Some of the thieves have been arrested, but the circumstances of their release are remarkable. It takes a modern police justice to be a veritable "Dogberry." The pens stolen from a certain firm were found in the possession of a person who was known to be a bad character. An arrest followed, and the police officer, securing the confidence or perhaps exciting the fears of the prisoner elicited a confession of guilt. Be that as it may, when the case came up before the magistrate the attendant lawyer for the defense, leading the police officer who was under examination as a witness up to the proper point, and taking advantage of an expression of the witness, objected to testimony as to the confession, on the ground that it was given under duress and in response to threats. The officer, we are told was not permitted to explain; the objection was sustained, and although the goods were identified as having been sold to the firm claiming them, the latter could not testify that they were its property nor that they were stolen, and the prisoner was discharged. The next phase of the case is funny. The goods were *returned* to the firm from which it had been alleged they were stolen, and the "expert" went on his way rejoicing at having escaped the perils (?) of the law.

Communications.

[Correspondents are requested to write on only one side of their paper. No responsibility for the opinions of correspondents attaches to this paper.]

The License Question.

To the Editor of The Stationer:

Permit me—a traveling agent of twenty years' experience—to say a few words on this question.

I am opposed to the licensing system solely on the ground of its being impolitic, unjust and diametrically opposed to the true interests of the trade in general and the community at large and calculated only to favor a few monopolists. It gives the small jobber and manufacturer, especially if he is a beginner, no chance of establishing a business, and would therefore throw the jobbing trade of the whole country into the hands of a few wealthy firms, while the prices of goods would be greatly increased, resulting in what is equivalent to a tax (of another kind) being placed on each community. It would also throw the retail trade, outside of the large cities, into a few hands in each place, causing more concentration of different lines of business in single hands, and all the small traders would be crushed out, only those remaining who could visit regularly the great markets to buy, or who could afford to send a buyer for the purpose. A good many fancy articles could not find their way into many country towns under this system, or would do so in very limited quantities. Some may deem this a benefit because they think such goods are of little real utility and only encourage extravagance. This, however, is a most superficial idea, because these are the very goods that are needed to make life pleasant and enable us to show friendliness to each other, as well as decorate our homes and make them pleasant and attractive.

But suppose it were right and proper that every State should put on traveling salesmen a tax of $100 to $300 per year for the privilege of endeavoring to do business for a few days of each year, within its limits, why might not every town and city also, as in the Carolinas and some other Southern States? And if every State and

city in the Union had such laws, $300 or $500 would probably represent the expense of license for each State. This would have, as I have endeavored to show, a prohibitory effect on most salesmen, but the houses left to do the business would be able to make it up off the storekeepers that remained, and the latter off the public, who would ultimately be obliged to pay the tax ten times over to the monopolists. But, as I have always understood, the object of all wholesome legislation is to benefit the many rather than the few. This test, then, shows such an enactment to be utterly unsound and opposed to the true interests of the public at large. It will not do to look at such things from the narrow standpoint of self interest. Nobody can prove the licensing system to be right merely by showing it is best for his own interests. Such reasoning would be only blind selfishness and utter disregard of everybody else's rights.

It is to be hoped that the question will con tinue to be agitated and debated from the broad platform of the welfare of the whole country with justice to all, uttterly ignoring particular interests, which tend only to aggrandize certain individuals at the expense of the general public.

HAWTHORN.

ANSWERS TO CORRESPONDENTS.

H. S. & Co.—Ask for the address of some importer of grass-bleached English tissue papers. Ans.—Vernon Brothers & Co., 65 Duane street, and Wilkinson Brothers & Co., 72 Duane street, New York.

J. J. M.—Wants names of paper twine makers and of manufacturers of white and blay (?) twines. Ans.—John M. Conway, 113 Worth street, New York, makes paper twine, and J. P. Travers & Son, 46 Beekman street, make and sell a general line of twines. There are many other twine manufacturers, but we suppose that these addresses will suffice. We are not sure of what our correspondent means by "blay" twines. The expression is new to us, but we assume that it refers to fish twines.

OBITUARY.

FRANCIS HANMER.

Francis Hanmer, president and treasurer of the Hanmer & Forbes Paper Manufacturing Company, at Burnside, Conn., died at his residence in that city on last Sunday morning after a short illness. Mr. Hanmer was over eighty years of age, and had been connected with the paper trade for over thirty years, and was well known during that time as a man of irreproachable character and industrious habits. Previous to his engaging in the paper trade he was largely interested in the manufacture of gunpowder. It is said of him that his eyesight was most remarkable for a man of his years, as he was able to read the finest print without the aid of glasses.

EDGAR T. WILLSON.

Edgar T. Willson, of the firm of De Lacy & Willson, mercantile printers, corner William and John streets, this city, died of consumption at his residence at Pamrapo, N. J., on Sunday last, aged about thirty-eight years. Mr. Willson was well known among the trade for whom his firm did a great deal of work, and although comparatively a young man, was well thought of by all having business relations with him. He was an old and active member of the Ninth Regiment of this city, a lieutenant in one of its companies, and was also connected with the Masonic fraternity. His surviving partner is lieutenant colonel of the celebrated Sixty-ninth Regiment of this city. Mr. Willson leaves a widow and two children.

MARTIN R. DENNIS.

The death of M. R. Dennis, Newark, N. J , is announced as having occurred last week. Mr. Dennis had been for many years a member of the book and stationery trade, and was highly esteemed in the community in which he lived. The Board of Trustees of the First Presbyterian Church of Newark, and the Directors of the Newark Industrial Institute, with which he was connected, met and passed resolutions of eulogy and regret.

The booksellers and stationers, of Newark, met at Ingalls & Co.'s store, on the afternoon of February 2. H. B. Thistle, of the firm of Ingalls & Co., called the meeting to order, and stated the object of the meeting. He also paid a high tribute to the worth and sterling business character of deceased Charles H. Ingalls was then chosen chairman, and J. L. Davies, of the firm of Duncklee & Davies, secretary. Remarks were made by Messrs. Duncklee, Plum, Hardham, Mulligan, O'Connor, Chipp, Davies, Baldwin, Thistle and Chandler, all of whom bore testimony to the integrity, high character and genuine manhood of Mr. Dennis. Chairman Ingalls, who was formerly a partner of the deceased, spoke substantially as follows:

He said that twenty-six years ago he entered into the employ of Mr. Dennis, and was for many years his partner in business. He paid a warm tribute to the many excellent qualities of deceased, and dwelt at some length upon his uniform kindness and solicitude for the welfare and happiness of those who were under his care, and stating that those who loved Mr. Dennis the most were those who knew him the most intimately, and added that while not a demonstrative man, his friendships were warm and genial and his companionship most enjoyable.

Messrs. Chipp, Mulligan and Plum were then appointed a committee to prepare and submit to the meeting suitable resolutions in regard to the death of Mr. Dennis, and after a brief consultation they reported the following, which were unanimously adopted:

Whereas, We learn with heartfelt sorrow of the death of our late associate and friend, Martin R. Dennis, who was not only the oldest representative of our trade in this city, but who, as a conspicuous example of business integrity and energy, has ever brought honor and respect to the profession; therefore be it

Resolved, That while we in submission bow to the will of the Disposer of all things, yet we deeply deplore our loss, and hereby place on record our just appreciation of his sterling manliness, his purity of life, his consistent deportment as a Christian, a gentleman and a merchant, and his active and useful interest in all things pertaining to the welfare of our trade.

Resolved, That in the death of one whose untiring energy and ceaseless industry have made him a name in this community, and who added to these too rare qualities an integrity that was never questioned and a kindness that never failed, the trade has met with a loss indeed.

Resolved, That we, his survivors, can do nothing better to perpetuate his memory than to imitate his virtues, so that when death, the limit of human actions, shall claim us as it has him, our survivors shall say of us, as we do of him, excellent citizen, true friend, farewell.

Resolved, That while no words of ours can assuage or even mitigate the grief of the bereaved family of our late friend, we claim the privilege of sharing their sorrows, and commend them to the care of our Heavenly Father.

Resolved, That these resolutions be published and a copy of the same transmitted to the family of the deceased, and that our respective places of business be closed during the hours of the funeral services.

The National Blank Book Company is awaiting the completion of its new building at Holyoke to move its manufactory to that place. This will most likely be by May 1 next. It will continue its salesroom in its present location, only vacating the upper floors occupied by its factory.

Market Review.

OFFICE OF THE AMERICAN STATIONER,
WEDNESDAY, February 9, 1881.

THE MONEY MARKET.—The money market worked smoothly throughout the past week, but there was an increase in activity, and capital was in somewhat better demand. Call loans on pledge of stock collateral ranged between 6@3 per cent., and closed at 4 per cent. Loans were made on government bonds at 3@4 per cent. Time loans were quoted at 3½@4½ per cent. In the discount market prime mercantile paper ruled at 4½@5½ per cent. The government bond market was quiet, but generally firm, and quotations were unchanged except for new 4s, which declined ⅛ per cent. Railroad mortgages were in fair demand, but the market was unsettled. The sterling exchange market is not strong, owing to the very light inquiry which prevails for sterling, rather than to the plentiful supply of bids. The posted rates for prime bankers' sterling are respectively 4.82½@4.83 and 4.85½@4.86; the actual rates are 4.82@4.82¼ and 4.85@4.85¼; cable transfers, 4.85¾@4.86, and prime commercial bills, 4.80¾@4.81¼.

THE PAPER MARKET.—While dealers in all branches of the trade are not exactly driven with business, yet in some grades of goods dealt in this is literally a fact, and, taken altogether, the jobbing trade have very little to complain of. It is true that there is not that amount of goods being handled now as there was a year ago at this time, yet the conditions of trade are now on a far more satisfactory basis, as the demand is governed solely by the actual requirements of consumers and free from pernicious speculative influences, which, together with the ruling steadiness of values, promises a very satisfactory result. In fine writings and print papers there is no new feature to add, the business in both being still only of a moderate character. Manilla wrappings can be said to take the lead in point of activity at the present time. All the mills have as much as they can do, and dealers generally wear very cheerful countenances, the activity in and around their stores telling plainly that business with them is anything but dull. Prices, too, are firm throughout, and difficulty is experienced in placing orders at the mills. Straw wrappings show no new features, trade being about as last week. Binders' boards are moving moderately, and prices are steady. We quote: $80@90 per ton for No. 1 and $60@70 for No. 2. The trade in straw boards is much lighter than a month ago, as box makers anticipated their wants for the spring trade to a great extent immediately after the reduction in prices occurred early in December.

THE STATIONERY MARKET.—Business continues to improve gradually as we near the approach of spring. Although trade in strictly spring specialties has not yet set in with much earnestness, very nearly every house is doing a moderate amount of business, the most of it through the medium of traveling salesmen, some who have just returned reporting the outlook as very promising. The wholesale trade in valentines is about over, but in Easter cards a very active trade is in progress, and the selections shown this year, taken altogether, are the most elaborate ever brought out in this country. New designs make their appearance almost daily, and the principal houses making them vie with each other as to which shall excel. The fan trade is also progressing favorably, and numerous new conceits are displayed in the large houses in the fancy goods line of the trade. There is no new feature in the prices of staple goods, which, as a general thing, remain steady.

DE LA RUE'S

1881. Valentines and Easter Cards. 1881.

THE SATIN AND MANUFACTURED SATIN SERIES A SPECIALTY.

MYERS BROTHERS, **Direct Importers,** 62 JOHN STREET, NEW YORK.

A full sample set of Easter Cards, being three cards of each series, and one of each design, in all sixty-nine cards for $12.50. Twelve satin samples, being three of each series, and one of each design of the four series, for $3.60. An envelope is sent with each card.

DELANO'S

RAILROAD Red Rubber Bands and Rings. COMMERCIAL

THESE goods are put up in bulk, each box containing a pound, thereby saving the expense of putting them up in gross and great gross packages, and are designed for use by parties consuming large quantities. These goods are very popular with **STATIONERS DEALING with LARGE CORPORATIONS, &c.**

THE SIZES ARE AS FOLLOWS:

Elastic Bands. Nos. 27, 28, 29, 30, 31, 32, 33, 0¼, 0½, 0¾, 00¼, 00½, 00¾, 000¼, 000½, 000¾, 0000¼, 0000½, 0000¾.

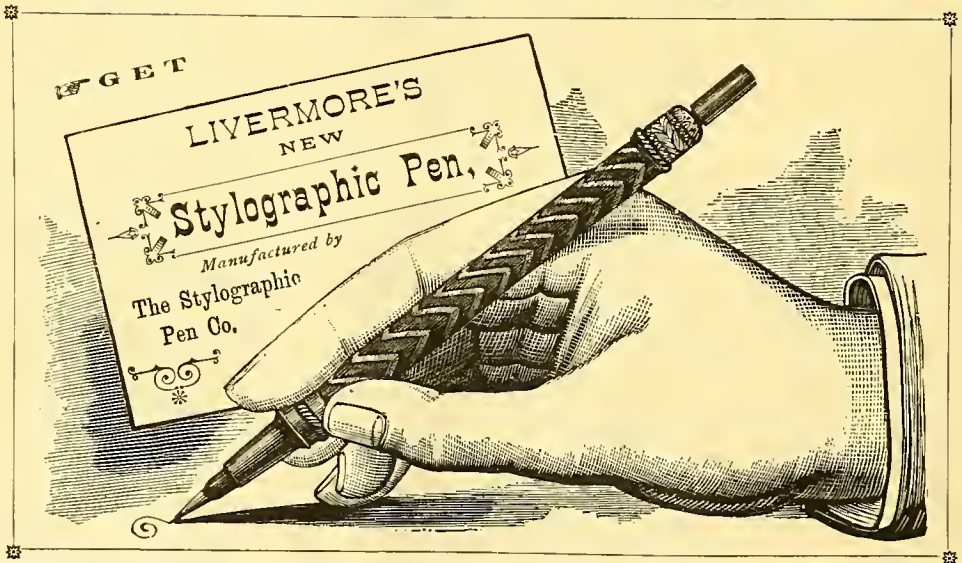
Nos. 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20 and 50. **Elastic Rings.**

P. O. Box 1337. Z. DELANO, Boston, Mass.

IF YOU WANT THE BEST STYLOGRAPHIC PEN,

The Latest and the Best.

Circulars on application.



Examination Solicited and Satisfaction Guaranteed.

The attention of the Trade is called to the improvements made and advantages offered in Livermore's New Stylographic Pen.

Patented July 15, 1879, and March 9, 1880.

FIRST—**A Smaller Air Tube,** allowing more space for the ink, and rendering the operation of filling easier and less frequent.

SECOND—**The Manner of Fastening the Needle,** not to the air tube, where it would be in danger of being bent or injured every time the pen was filled, but in the point, where it is not so exposed.

THIRD—**The Protection of the Spring** by a silver casing, preventing the ink from clogging its action.

FOURTH—**The Duplex Interchangeable Point Section,** furnishing great facility in cleaning the pen.

FIFTH—**The Ease with which Repairs can be Made.** The needle being in the point, it is not necessary to send the whole pen to the factory, but any dealer can supply a new point.

SIXTH—**Freedom from Legal Difficulties.** The New Stylographic Pen is manufactured under the patent controlling the use of an air tube in a Fountain Pen, and it is therefore free from legal complications.

The stationery thieves are about again, their objective points of attack this time being in the line of steel pens, and the trade would do well to be on the lookout for them. Last week a New York jobbing house received 700 gross of Gillott's No. 303 pens from a Washington firm, which wanted to dispose of the pens. On consultation with Henry Hoe, agent for Gillott, it was learned that the pens had been originally sold to a Baltimore house. The pens were returned to the Washington consignors and the Baltimore firm was notified. The latter immediately went on to Washington, saw the goods, identified its property, claimed and received the pens. The Washington firm, which alleges that it bought the goods as an offering of bankrupt stock, is out the money it paid for them. A city detective a few days ago, when strolling down the Bowery, saw a professional thief with a package under his arm, and on general principles at once arrested him. The package contained 75 gross of Gillott's 303 pens, which subsequent events proved were stolen from Noyes, Smith & Co., a large notion jobbing house of this city. Parties in this city have also been offering Esterbrook's Falcon pens at 25 cents per gross, the regular manufacturer's price being 40 cents. Stationers who may be offered these goods at suspicious rates may conclude at once that they have been illegally obtained, and should for the benefit of the trade cause the arrest of the parties offering them, and communicate at once with the manufacturers or their agents, as by purchasing them they are not only liable to have the goods seized by the rightful owner, but render themselves liable to being charged as accessory to the theft. In this connection it would be well to state, that any appearance of tampering with Gillott's private marks on his packages of pens, should at once condemn the goods as unlawfully obtained; at least, this is the common sense conclusion.

There is no strength in exaggeration; even the truth is weakened by being expressed too strongly.

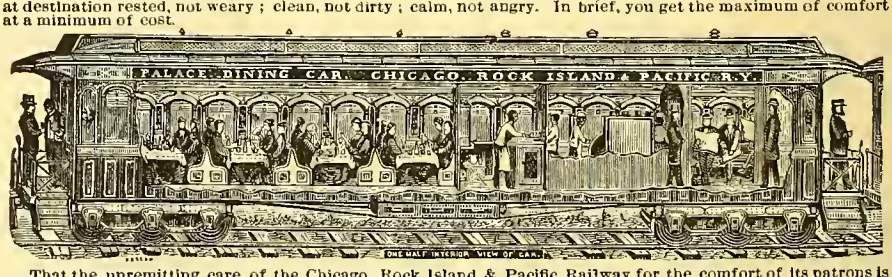
"THE GREAT ROCK ISLAND ROUTE"

Calls your attention to the following REASONS WHY, if about to make a Journey to the GREAT WEST, you should travel over it:

As nearly absolute safety as is possible to be attained. Sure connections in UNION DEPOTS, at all important points. No change of cars between CHICAGO, KANSAS CITY, LEAVENWORTH, ATCHISON or COUNCIL BLUFFS. Quick journeys because carried on Fast Express Trains. Day cars that are not only artistically decorated, but furnished with seats that admit of ease and comfort. Sleeping cars that permit quiet rest in home-like beds. Dining cars that are used only for eating purposes, and in which the best of meals are served for the reasonable sum of seventy-five cents each. A journey that furnishes the finest views of the fertile farms and pretty cities of Illinois, Iowa and Missouri, and is afterwards remembered as one of the pleasant incidents of life. You arrive at destination rested, not weary; clean, not dirty; calm, not angry. In brief, you get the maximum of comfort at a minimum of cost.



ONE HALF INTERIOR VIEW OF CAR.

That the unremitting care of the Chicago, Rock Island & Pacific Railway for the comfort of its patrons is appreciated, is attested by its constantly increasing business, and the fact that it is the favorite route with delegates and visitors to the great assemblages, political, religious, educational and benevolent, that assemble from time to time in the great cities of the United States, as well as tourists who seek the pleasantest lines of travel while *en route* to behold the wonderful scenes of Colorado, the Yellowstone and Yosemite. To accommodate those who desire to visit Colorado for health, pleasure or business, in the most auspicious time of the year, the Summer season and months of September and October, the Company every year puts on sale, May 1st, at all coupon ticket offices in the United States and Canadas, round trip tickets to

DENVER, COLORADO SPRINGS AND PUEBLO,

At reduced rates, good returning, until October 31st. Also to San Francisco, for parties of ten or more, good for ninety days, at great reduction from regular fares.

REMEMBER, this is the most direct route for all points WEST and SOUTHWEST. For further information, time-tables, maps or folders, call upon or address

RUBBER HEADED TACKS.

A New England firm has patented and is manufacturing a rubber headed tack, whose uses are multifarious. As an insulator for sewing machines they are largely used by the leading manufacturers, and are easily and quickly applied. For household uses they are placed in the backs of chairs to prevent damage to walls; in the ends and sides of door steps; in rabbets of large folding doors; on lids of pianos; in rabbets of rattling window frames, and, in fact, anywhere to overcome the nuisance of rattling. Car manufacturers use them to deaden noise and avoid abrasion of polished surfaces. Carriage manufacturers apply them to stop the rattling of window frames and doors, and for glass frames to drop upon on the inside of doors. Book manufacturers place them on the corners of large books to protect the binding. In schools slate frames and rattling desk lids demand them. On billiard cues they are used, and obviate the use of chalk. Indeed, there is hardly any limit to which this useful article may not be applied.

THE COSMOGRAPH.

M. Riviere, of Marseilles, France, is to be credited with a capital idea for popularizing astronomical knowledge through the medium of a simple monument which may be set up in public squares, private grounds, or any other convenient locality. Several have already been erected in French cities.

The cosmograph, as the invention is called, shows, first, by a vertical circle, the plane of the meridian. A rod, directed toward the polar star, passes diametrically through the circle and shows the position of the earth's axis. A circle placed at right angles to the first indicates the plane of the equator. Of course the inclination of the axial rod varies according to the latitude of the locality. A small rod, placed vertically above the meridian circle, shows the zenith. Four other arms, fixed 23° above and below the equator, mark the tropics, and four more, placed at the same distance from the points of intersection of the axis, mark the polar circles. The graduation comprised between the tropics allows of the sun's movement in declination being followed, the solstices and equinoxes being observed, and the succession of seasons noted. The equator, divided into degrees and receiving the shadow of the axis, becomes a sun dial, an arc of 15° counting one hour. After a little practice it is easy to refer the curves of the cosmograph to the heavens, when the principal constellations may readily be found, especially those of the zodiac, through which passes the plane of the ecliptic or annual apparent path of the sun.

Inscriptions in relief show the names of the various portions of the instrument, and several useful astronomical facts and data are engraved on the pedestal.

GILDING STEEL.—Polished steel may be beautifully gilded by means of the ethereal solution of gold. Dissolve pure gold in aquia regia, evaporate gently to dryness, so as to drive off the superfluous acid, redissolve in water and add three times its bulk of sulphuric ether. Allow to stand for twenty-four hours in a stoppered bottle, and the ethereal solution of gold will float at top. Polished steel dipped in this is at once beautifully gilded, and by tracing patterns on the surface of the metal with any kind of varnish, beautiful devices in plain metal and gilt will be produced. For other metals the electro process is best.

The first step to self-knowledge is self-distrust.

All this Stationery may be relied on to be according to representation. It is suited to the tastes of the most select trade.

Also, No. 1 White and Tinted Bristol Board.

SERIALS DEVOTED TO THE ARTS AND SCIENCES.

About the end of the seventeenth century serials devoted to the various arts and sciences began to appear.

The first journals devoted to the natural and philosophical sciences were the *Philosophical Transactions* and the *Miscellanea Curiosa*. The first commenced in London, in 1665, and the second in Germany, in 1670. The first medical serial appeared in Paris, in 1683, and the earliest upon jurisprudence in the same city, in 1692. Germany introduced theological journalism in 1701, and the first publication in philology in 1715, continuing to this day to exceed all other countries in its number of publications connected with the study of languages. The first periodical upon agriculture appeared in France during the eighteenth century, and the agricultural publications of that country, and those of England, where they are particularly excellent and numerous, are regarded as excelling those of both Germany and the United States of America.

An explosion occurred on last Friday night in the front portion of E. C. Palmer & Co.'s paper and printing warehouse, at Nos. 93 and 95 Camp street, New Orleans, La., blowing fragments of the windows entirely across the street, and setting fire to the building. The explosion was apparently the work of inexperienced burglars. The safe and vault doors were blown open. The concussion was so great that it completely wrecked three front windows on the second floor, and opened all the doors of the building, scattering the glass and splintering the wood work. Several windows across the street were also badly broken. The place was at first thought to be on fire but no damage resulted from it. The alarm created by the explosion probably prevented the burglars from stealing anything.

A letter in the *Typologie-Tucker* says: The employment of porcelain type is now *un fait accompli*. Porcelain types resemble those made from metal, the only difference being in the foot, and that only in the large letters used for posters. This is accounted for by the kaolin being used in a very plastic state, and then placed in an oven heated to nearly 1,200°. This baking is said to render the type nearly unbreakable; a fall from the "stone," which would ordinarily damage metal, has no effect on porcelain type. Two large Parisian houses have used these types for broadside work, and have expressed themselves thoroughly satisfied. Porcelain type is alleged to be from 30 to 40 per cent. cheaper than metal, of about the same price as wood type, but possessing the advantage of superior durability. It is also urged in its favor that a certain amount of violence must be employed to damage it; and in color printing it takes the ink easier than wood or metal.

A solution with which to moisten tissue paper in order that a press copy may be taken from writing which has already been once copied, or from writing too old to copy from ordinary water moisture, and which will not discolor the paper, is composed of a weak solution of tannic acid.

It may be open to question whether any success that is ever worth the having, or the beholding, is not built on a series of failures or repeated efforts. The divine fire is not blown out by a breath of disappointment. Discouragement sometimes fans the flames.

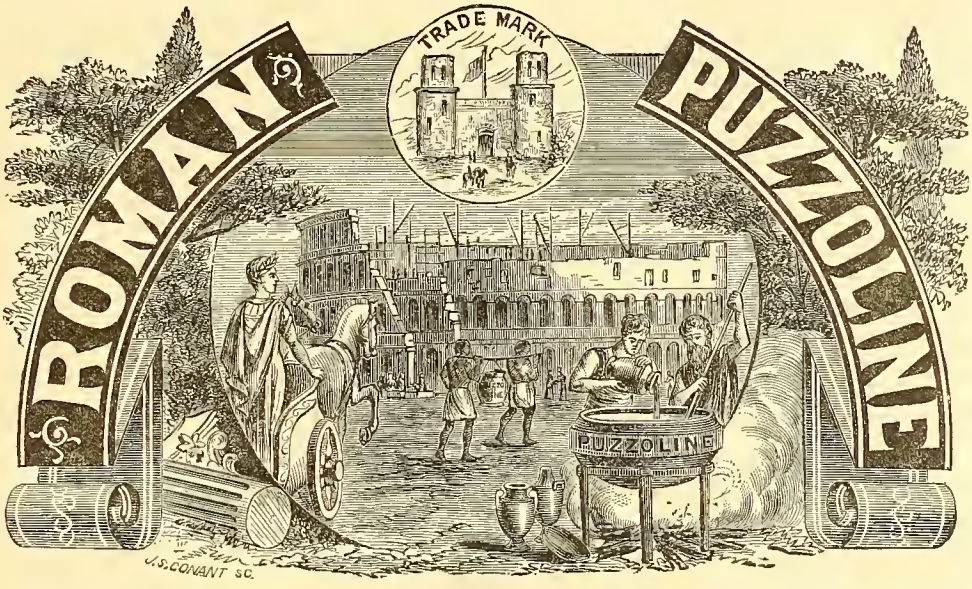
The Cement of the Ancients.

UNEXCELLED FOR STRENGTH AND DURABILITY!

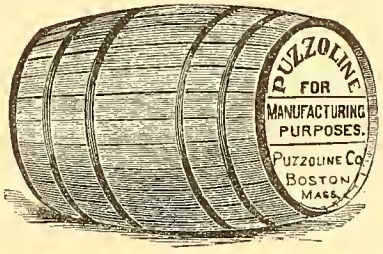
☞ CAUTION.—Manufacturers or others using adhesives of any kind are invited to examine into the merits of the above before purchasing, as none are genuine without the Trade-Mark, a castle, blown into the bottle.



☞ CAUTION.—Manufacturers or others using adhesives of any kind are invited to examine into the merits of the above before purchasing, as none are genuine without the Trade-Mark, a castle, blown into the bottle.

This new adhesive is a **liquid glue and cement combined,** and possesses greater strength and tenacity than any other known cement. It is composed of no injurious ingredients, **is entirely odorless,** and is **always ready** for use; no heat being required as with other adhesive compounds.

As a **Cement** in repairing **Crockery, Glassware** and **broken Ornaments** of all kinds, it is **unequaled.** It will stand the test of boiling water as no other adhesive will. As a **Glue** it is not affected by heat or moisture, and will hold more firmly than any other known preparation.



CIMITOLINE:

A MUCILAGE.

Its action is quicker, it is not affected by moisture, will not sour, mold, or dry up in any climate, and does not wrinkle the paper, as is the case with mucilage now in general use.

MANUFACTURED SOLELY BY

THE PUZZOLINE COMPANY,

New York—4 Bond Street.

☞ DESCRIPTIVE PRICE LIST ON APPLICATION.

TWO KINDS OF TIME.

Are the mornings now shorter than the afternoons? and do the days increase faster in the afternoon than in the morning? are questions of frequent recurrence among those interested in observing the lengthening days. According to the almanac this would seem to be the case. Take, for illustration, the 18th of January. The morning is twenty-two minutes shorter than the afternoon, and while in the morning the day's increase is only five minutes, in the afternoon the gain amounts to twenty-three minutes. But noon by the clock and noon by the sun are not the same thing, and the real noon is the passage of the real sun across the meridian or point overhead. Taking this for the standard, the mornings and afternoons are of equal length and the day's increase is uniform at each end. Thus, on the 18th, the sun is eleven minutes slower than the clock, and the real noon does not occur until eleven minutes after 12, clock time. The length of the day on the 18th is 9h. 32m. One half of the day is 4h. 46m. Subtract this half day from the real noon, 12h. 11m., and the result is 7h. 25m. for sunrise. Add the half day to the eleven minutes, and the result is 4h. 57m. for sunset, the morning and afternoon being equal and the day's increase uniform. Almost any almanac will give the required data, which are the time the sun is fast or slow and the day's length; a similar result will follow for any day in the year, remembering that if the sun is faster than the clock the time must be subtracted from 12 instead of added, in order to obtain the real noon.

The question then arises, what is the need of two kinds of time, and why do the sun and clock disagree? This may be easily understood. The interval between two successive returns of the sun to the same meridian, or from noon to the next noon, is called a solar day. Now, this daily motion of the sun is not uniform, but is also greatly affected by the inclination of the equator to the elliptic or sun's path through the heavens, so that the solar days are constantly varying in length. In former times the sun was the sole regulator. It was noon when the sun was at the meridian, and the hours were marked by the sun dial. This answered very well until clocks were made to keep time better than the sun, and then it became necessary to put them forward when the sun went too fast, and to set them back when the sun went too slow. To remedy this trouble all attempts to make them correspond were given up and a mean solar day, made up from the average of all the solar days in a year, was made the standard where accurate time is required. This mean sun, corresponding to clock time, is not the real sun, but is sometimes ahead of the real one and sometimes behind it. Therefore, irregular time, or that depending upon the motion of the sun or sun dial, is called apparent time, while that indicated by the fictitious sun, or a clock going at a uniform rate, is called mean time; the difference between them, which may amount to sixteen minutes, is called the equation of time. There are only four times in a year when the sun and the clock coincide. This point occurs on the 30th of January, when the sun is fourteen minutes slow, and continues so until the 23d of February. The difference, then, gradually lessens until the 13th of April, when noon by the sun and noon by the clock coincide. The sun after that time is faster than the clock, reaching the extreme points, or four minutes, on the 6th of May, the difference then lessening until the 12th of June, when sun and clock are again together. The next extreme is on the 13th of July, when the sun is six min-

utes slow. They are together again on the 30th of August; the sun is sixteen minutes fast on the 30th of October, and on the 23d of December sun and clock are together for the fourth time during the year. It is interesting, as well as instructive, to watch these variations between apparent or solar, and mean or clock time, and almost any observer can construct a sun-dial which will mark the passage of the sun over the meridiau, and note how much it varies from noon by the clock.—*Providence Journal.*

FOLEY'S
Celebrated Gold Pens and Pencils
THE FINEST AND BEST.

CIRCULAR.—To those engaged in mercantile pursuits, any invention that will facilitate their labor is highly worthy of notice, as well as of extensive patronage. One of the most important inventions of the present age is that of a pen that possesses the necessary qualities of firmness in mark and durability in use. Pre-eminently such are those of JOHN FOLEY, Manufacturer of Fine Gold Pens and Pencils, No. 2 Astor House. Their superior value is tested by the long time he has been engaged in our city in their manufacture. We, the subscribers, who know the value of FOLEY'S PENS from constant use of them for a number of years, cheerfully recommend them to those who wish for the best and most perfect Gold Pen ever made.

BYRON WESTON

DALTON, MASS.,

HAS BEEN AWARDED THE

GRAND PRIZE GOLD MEDAL

AND RECOMMENDED THE

Medal of Honor and Perfection

At PARIS, 1878,

This being the **HIGHEST and ONLY AWARD** given for

LINEN RECORD AND LEDGER PAPER.

—A SPECIALTY.—

THIS Paper has received THE HIGHEST PREMIUM over all others from *the Cincinnati Industrial Exhibition*, *Massachusetts Charitable Mechanics' Association*, *Franklin Institute* of Philadelphia, Louisville Exposition, Medal and diploma from *United States Centennial Commission*, *Medal of Progress American Institute*, *1877*, *and Medal of Improvement and Progress*, *Boston*, *1878*. Its

PRINCIPAL ADVANTAGES

are as follows:—1. It contains more LINEN than any other Ledger Paper, has a longer fibre, and is, consequently, tougher. 2. Having a harder and better body, it frays less in erasure, so that by simply using the rubber after the eraser, the ink is prevented from spreading. 3. It is more uniform in Weight Color and Finish. 4. It never cockles if properly bound. 5. Its chemical action upon ink is such that it both writes and rules up better. For proof of the foregoing, refer to a large number of Stationers, Bookbinders, Bookkeepers, and Recorders, who have given it, after a severe test, the preference over all others. This paper is *Double Sized*, and will stand any climate or the most acid of fluid inks.

☞ **Send for sample sheet, ERASE and REWRITE FOUR TIMES on same spot.**
Each sheet is water-marked with name and date.

The American Stationer

A JOURNAL DEVOTED TO THE INTERESTS OF THE STATIONERY & FANCY GOODS TRADES

REDMAN & KENNY, N.Y.

"The Stationer"—Every Thursday—$2.00 Per Annum.

VOL. IX.---NO. 7. NEW YORK, FEBRUARY 17, 1881. WHOLE NO. 295.

Correspondence.

BOSTON NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

BOSTON, Mass., February 14, 1881.

What with the floods and the bad roads and worse pedestrianism, the stationers, as well as dealers in all other kinds of merchandise, have experienced a dull week, both wholesale and jobbing. The retailers have had only a moderate trade. Among the periodical and fancy goods dealers there has been a fair trade in valentines, but not much to brag of.

The valentine cards of L. Prang & Co. appear to be well adapted for circulation among persons of refined taste, and are a decided improvement upon the silly and meaningless things that have for years disfigured the shop windows Let us hope that the introduction of Prang's valentines is the signal for no longer murdering St. Valentine on his recurring anniversary.

The agents of paper mills report plenty of water and plenty of stock. Holders of paper stock in Boston are disposed to wait for higher prices, believing that with settled weather trade will receive a fresh turn and that stock will be in better demand. The supplies of fine paper are ample for the season. Manufacturers of common paper were never more busy than they now are. Several new mills in the vicinity of Boston are in contemplation.

Apropos of the chromo business and other kinds of cards, referred to in my last letter, a singular case has just happened, which illustrates not only the competition which exists among boys and girls in securing the largest and finest collection, but also the weakness of human nature to resist temptation. A Cambridge letter carrier has been held in $1,000 by a United States commissioner for the non-delivery of complete postal packages containing advertising and fancy cards.

It appears that the full number of cards mailed to certain addresses did not reach their destination, and in order to fathom the mystery which existed at the Boston office, or the Cambridgeport branch, a decoy package of very nice lithographic cards was addressed to a party in Cambridgeport by the post office detective who had charge of the case. Result: Detection of a letter carrier who had, upon his own confession, on several occasions taken cards from unsealed packages for his little boy, who was in competition with other boys in securing the largest and best collection of cards. And the letter carrier turns out to be one of the most popular and oldest men in the service.

The winter reunion of the Massachusetts Press Association at the Hotel Vendome, on Wednesday, attended by one hundred and sixty members and their lady friends, was one of the pleasantest affairs of the kind in the history of the association. The details of arrangements for the next summer excursion were left to the Executive Committee, with full power.

There is an unusual absence of material for small talk or gossip this week. Perhaps the "thaw" has caused a depressive feeling all around. The mud and slush have "depressed" more or less, anyhow. With clean streets again people will feel more like trading.

Samuel Hano & Co., jobbing stationers, report a good trade in manifold order and letter books. Their facilities in this special line are among the largest in the country.

J. H. Bufford's Sons have got fairly settled in their new quarters at Harrison Square, and are now more than ever prepared to execute all kinds of work in their line. This firm's line of new cards for the spring trade is attracting special attention. The retail department of Buf ford's Sons is located at 39 Federal street, in the vicinity of the new post office. L.

CINCINNATI NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

CINCINNATI, O., February 14, 1881.

Our latitude has been blessed with exemption from damage by storm and flood. Half a degree north of us the trouble began which took in all the area at the North marked out for the joint operations of Boreas and Aquarius in a freakish frolic, to which, for savage rudeness and mischievous recklessness tradition has handed down no parallel. This winter will form an epoch in the climatic history of this country. It has about closed up business during the present month, especially for the last week, since trains freighted with passengers have been "stuck" in the snowdrifts of the Western plains and prairies, and communication has been severed by the winter-formed icebergs rafted on the angry bosoms of Indiana and Ohio table land rivers, snapping bridges as flame snaps flax.

In the Cincinnati region the paper mills have suffered little damage, and that indirectly if at all, and only in the matter of delay.

Of course, business has been a little dull in the trade in Cincinnati during February. The roads in some parts of the country tributary to this city have been bad, and that, you know, affects business. The country trade has been heavily stocked with stationery—in many places overstocked with certain lines of goods. Just now there is here a brisk business in valentines, and expensive ones are in request. The business in comics is not so large as it was when business was dull. February is at best an "off" month, and this season the weather has aggravated that peculiarity and made it more prominent. But Easter is coming, with the early swallow and the dove, and hopes are bright for briskness at that delightful season.

Strobridge & Co. are doing an immense business in theatrical and show chromos. Matt Morgan is in their employ, and is kept busy in his splendid line of work, and he is assisted by a corps of artists. The company is working two splendid Hoe lithographic presses day and night. After dark its whole establishment is kept luminous by electric lights.

There has been a change in the firm of Alison, Smith & Johnson, of the Franklin Type Foundry. Johnson goes out and Alison and Smith remain.

Van Antwerp, Braggs & Co., school book publishers, have turned over to Robert Clarke & Co., all of their "outside book and stationery business," and have determined hereafter to do nothing outside of their own strict line of publications, which all the world knows is immense.

Trade has been represented here within the last fortnight by travelers as follows: Lipman, for Boorum & Pease; Aikenhead, for John Gibson; Cameron, for National Blank Form Company; Watkins, for American Lead Pencil Company; Otis, for Acme Stationery Company, and some one for the Tower Manufacturing Company, all of New York; also by Clayton, of Powers Paper Company, Springfield, Mass.; Swain, for Platner & Porter, of Unionville, Conn., by Turner, of Langfeld, Turner & Andrews, Philadelphia. PRINCE WILLIAM.

CHICAGO NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

CHICAGO, Ill., February 14, 1881.

Indications of a good spring trade throughout the West are strengthening every day. Stationers are all hopeful, with large enough fund of auticipation to buoy them over the wintry weather we have been having.

Culver, Page & Hoyne report themselves busy, with prospects of being much more so.

The retail trade during the last week has made its expected jump in the matter of valentines. Despite predictions long since made to the contrary, the good old patron saint of lovers holds his own, and instead of a falling off, the trade this year in valentines has been decidedly better, not only in quantity, but in quality. I have seen fewer hideous caricatures and more tasteful

tokens in our shop windows than for several years heretofore.

Mr. Stuart, of Skeene & Stuart, says that the trade of that house during the two months of December and January past have been larger than ever before. This firm makes a specialty of Pilger's "Burlington" bill and letter files, which are having a demand beyond the manufacturers' present ability to supply. A patent has been applied for on this file, but neglect to follow up the application has led to one or two dangerous infringements.

The manilla department lately added to the regular busiuess of Carter, Rice & Co., has been placed in charge of O. D. Forbes, formerly of W. Y. Barker & Co. I. S. Lion, formerly with the Dillingham Paper Company, is also now connected with this firm.

John R. Anderson & Co., school books, &c., have removed from 40 Madison street to more convenient quarters in Central Music Hall Building; their present number being 46 Randolph street. Wm. C. Garside is their manager.

J. M. Woodford, for sixteen years past connected with W. G. Holmes' book store, 77 Madison, is retained by the present owner, F. H. Revell, in his old position.

The Great Western Type Foundry, of our city, lost a valuable assistant in the departure last Tuesday of Sibley A. Pierce, who goes to take charge of the Great Western Type Foundry at Kansas City.

Edward Lovejoy, 88 State street, displays a very tasteful stock of frames, chromos, photos and fancy goods, and reports a lively business.

Mr. Schweitzer, of Schweitzer & Beer, states that trade is good; especially in the celebrated "Whitney" baby coaches, for which they are sole agents in the West. The first fruits of the spring trade are already being reaped, and the "prospects were never so good." The coaches exhibit this year some very tasty "get-ups" in the way of Persian trimmings.

The maps for H. P. Hubbard's (New Haven, Conn.) "Newspaper and Bank Directory of the World" were engraved in this city by Henry G. Stebbins. How is that for Western enterprise!

Mr. Thomas—Thomas Ink Company—renders a cheerful report of his branch of business, "chording" well with the other voices of prosperity. He expects to start shortly on a business tour through the East.

In a street conversation with E. A. Blake, Western manager for C. B. Cottrell & Co., of the well known Cottrell presses, that gentleman asserted that never since he has had to do with the press trade (a number of years) has he done so much business in any six months as in the one month of January past. He says that the number of sales has been surprising—between seventeen and twenty presses in that time. Now, while this statement, unqualified, might mean little, yet, when we hear that at least four-fifths of those sold are large, "two revolution" presses, costing from $3,000 to $5,000 each, a just idea can be formed of the significance of the statement. Printers everywhere, even in the backwoods of the far West, are beginning to feel the value of time and labor saving machinery, and, this subject once comprehended, buyers are satisfied only with the best. Hence the "boom" in Cottrell presses.

Mr. Kimball, Readers and Writers Economy Company, is at present out of town. On his return in a day or two he intends starting on a prolonged Western canvass.

Last, but not least, as a pleasant send-off to my letter, I clip from an exchange the following personal: "Frederick B. Smith, of the firm of Jansen, McClurg & Co., was united in marriage to Alice Wetmore Smith, of Hallowell, Me., on Thursday evening, at St. Matthew's Church."

G. B. H.

MICHIGAN NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

DETROIT, Mich., February 14, 1881.

St. Valentine's Day, the 14th of February, was originally celebrated in England, Scotland, and different parts of the Continent, particularly Lorraine, and some cities of France. In the fifteenth century, making presents of a "valentine" was very popular among the upper classes, and at many European Courts. But as time rolls on, so do the style of valentines. Each year brings its peculiar kind, and 1881 particularly so. The fancy lace valentines are gradually being superseded by artistic cards, similar in style to the Christmas and New Year cards imported by Thomas Dando & Co. from De La Rue & Co., of London. The beauty of this London firm's cards consists in the soft colors used, and as their designs are mostly of a figure order, they are obliged to use the very finest and most subdued colors.

L. Prang & Co., Boston, have presented to the trade, through the many recent issues of THE AMERICAN STATIONER, a full and descriptive line of chromo valentines, the most beautiful and artistic ever presented to the American people. Their lovely card chromos of flowers, leaves, grasses, small fans, and a hundred different designs made by the best artists, and manufactured in elegant forms, may be preserved for years as beautiful souvenirs. The good taste displayed by these designs will probably revolutionize the trade in valentines, and reform it of the frivolity which has so much deteriorated the custom of recent years. The stock has been complete in most houses, even to druggists, florist and confectionery stores.

The new paper mill at Jackson, H. N. Mather, proprietor, is now running in good order, and turns out in quantity from four to five thousand pounds of straw wrapping daily. The building is principally brick; three 62-inch cylinder paper machines; steam engine, 120 horse-power. This mill commenced running last Monday, and trade has been good up to date at Jackson mill.

R. A. Beal, of Ann Arbor, publisher of "Dr. Chase's Receipts," complainant in the case of Beal vs. Ann Arbor Printing and Publishing Company, has filed two bills of interrogatories to be answered by the defendants. The one to be answered by the printing company numbers seventeen articles, ond the one to the other defendant nnmbers twelve articles.

The Detroit *Graphic*, and also the *International Reporter*, both suspended for a week, but the *Hotel Reporter* appeared again on Saturday.

S. M. Finley, druggist and stationer, of Niles, goes to Salt Lake City, to labor for Bradstreet's commercial agency.

It should have been stated in my former letter that Mr. Shumway resigned his position with Mr. Nourse, at his store, for a similar position at New York.

Thorndike Nourse arrived from the East the latter part of the week, and looks better for his trip.

Mr. Richmond, of Richmond, Backus & Co., expects to leave Detroit shortly for an extended trip to Florida, Bermuda and the West India Islands for the benefit of his health, and to find out how fortunes are made on the plantations of Cuba.

The collector of this port will sell at the custom house on February 24, at noon, 1,800 pounds cotton rags, 410 pounds woolen rags, 86 pounds mixed rags, &c., seized for violation of duty. The way of the transgressor is hard. People will go over the channel and try to smuggle those goods over with other produce, but they usually lose their stock, and discover that the trick won't work.

F. W. Wood, of J. B. Lippincott & Co., is here taking large orders from the trade for their new re-revised edition of Chambers' Encyclopædia, which will be published in ten volumes, royal octavo, cloth, $15; sheep, $20; and half morocco, $25. His stock is mostly new. He has also a specimen copy of Worcester's New Dictionary. This will contain 12,500 more new words, and has 210 new pages, which will be published as a supplement. The price of this new book is $10 only. In this connection it must be said that the American Book Exchange edition of Chambers' Encyclopædia, fifteen volumes, is $15, and will not be gotten up in the manner and style in which the Lippincotts advertise their new encyclopædia.

William Horn, with Koch, Sons & Co., has the finest line of imported albums ever seen by the trade.

Samuel Barling, with Thos. Nelson & Sons, of New York, has a fine assortment of Episcopal prayer and hymnals in every style of binding and size; also, teachers' new bibles, with something new in "indexing."

W. J. Kelly, with J. E. Potter & Co., Philadelphia, has a new line of samples; also imported books.

The travelers report trade in Detroit as rather slow. The numerous representatives from the East who have visited this half-way city to the West lately, must remember that all of our stores have not yet taken an account of stock, and many bought heavily prior to the holiday season. When one hundred sets of Chambers' Encyclopædia can be sold by one gentlemanly representative in less than twelve hours, don't think, commercial travelers, that there is a "thaw" in Detroit.

A few arrivals are mentioned this week for fun: J. J. Fraser, with Riverside Paper Company, Holyoke, Mass.; Mr. Vandegript, with Charles Scribner & Sons, New York; Will Horn, with Koch, Sons & Co., New York; W. J. Kelly, with John E. Potter & Co., Philadelphia; W. Tatlock, with Lee & Shepard, Boston; F. W. Wood, with J. B. Lippincott & Co., Philadelphia; Samuel Barling, with Thos. Nelson & Sons, New York; Jas. T. Watkins, with American Lead Pencil Company, New York; John H. May, with Porter & Coates, Philadelphia; Thos. S. James, with Dan'l Slote & Co., New York; O. H. Houghton, of Houghton, Miflin & Co., Boston; W. H. Chamberlin, with Z. Crane, Jr. & Brother, Dalton, Mass.; Mr. Worthington, of New York; Mr. Gladdings, of Philadelphia; Mr. Illfelder, of New York.

CITY OF THE STRAITS.

OHIO NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

DAYTON, O., February 11, 1881.

At last mud is king, and the snow and ice are a thing of the past.

Our ten weeks of sleighing are a pleasant memory only.

The mills that have been crying all winter for more water are satisfied—in fact, they have more than they relish. One prominent paper maker, who has complained all winter of scarcity of water, was heard to lament to-day that the water was twelve feet deep in the basement of his mill. As the weather is a little

colder, and the snow all melted, we do not think much further trouble need be expected.

Business among all the mills is good, and rushing with the wrapping paper makers. The price in news and book is not very firm. This is caused to some extent by the prospective decline in rags and the reports of lower prices in the East.

General trade cannot, in truth, be said to be brisk; the weather has been against it; but all signs seem to point to better times.

Travelers are plenty now. Since my last letter, Raisbeck, with Ph. Hake, has been here. Raisbeck is nothing if not neat. He was in the depths of despair at the state his samples were in. The coal soot was too much for them, and his soul writhed to see his beautiful line begrimed with soft coal soot. Watkins, of the American Lead Pencil Company, Aikenhead, with John Gibson, McNamara, of Anderson & Cameron, and Peck, of the Chapin Paper Company, have all been in our city. They all report a good trade.

Amongst expected arrivals is Fred Horn, with Koch, Sons & Co., who is due here to-morrow, with the greatest show in albums, he claims, ever seen in the West.

Speaking of commercial travelers, brings up the subject of a local license. I have read your editorials and the various communications in your paper with interest, and think that in the main you are correct. One thing is certain that, for every dollar a drummer is taxed in a town or State, he will try to get two back in advanced prices charged for his wares.

There is one class of drummers I am not so clear whether they should go entirely free; I refer to jewelry and other agents who carry a stock of goods with them and deliver as they sell.

It seems to me that the best way to settle the whole matter is to make a case in each State and get a decision in the matter before the highest court, which ought to be final.

All of our stationers' windows are filled with valentines, and the display was never finer. The demand for valentines in the larger cities is running more to cards, and the box and lace cards of the higher prices are being neglected.

Anniversary cards are an institution. The makers of them must be wideawake, as the public taste is being enlightened, and poor goods in bad designs have seen their day. There is a demand for better; at least I speak for the

MIAMI VALLEY.

DOMINION NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

TORONTO, ONT., February 12, 1881.

I sent you a *Globe* newspaper last week containing a review of the Toronto wholesale trade for the year 1880; as there are many of your readers who do not see that paper, who are more or less interested in the progress of trade on this side of the line, I append that portion of it which relates to the business which your paper so efficiently represents:

The wholesale stationery trade throughout the year 1880 was good. In the early part of the year the prospects were not favorable, and up to the month of August the trade was not more than moderately active. In August, however, the business increased to a wonderful extent, and the greatest activity continued throughout the fall to the end of the year. During the week preceding and the week following Christmas, business was remarkably good, not only in the city but all through the country. Trade has during the past year been extremely profitable, and payments have been highly satisfactory—far more so than they have been for some time past. Prices were good and the demand was large. The increase in the amount of trade done in 1880 may be safely estimated at about 33⅓ per cent. better than that done in any of the preceding five years, while the number of failures throughout the last year have been few compared with the number in 1879 or during the four years preceding.

There are at present seven leading wholesale houses in this trade in Toronto, and the amount of transactions by these houses in 1880 may be estimated at $1,750,000. The manufacture of envelopes has also largely increased, one firm in the city alone reporting that they manufactured them at the rate of one million per week, while in the years preceding 1880 the trade in this line did not amount to more than one million per month. Dealers report that the trade in articles of luxury was largely augmented, and the public seemed more disposed to purchase in this line than during the years when the depression was so great. The prospects for the year 1881 are exceedingly bright, and a prosperous business is confidently expected by those in the trade. Wholesale dealers all unite in pronouncing the past year as an exceptionally prosperous and favorable one.

The windows and counters of our book and fancy goods stores are tastefully and temptingly decorated with valentines, and any time through the day the youth of both sexes may be seen taking hasty and wistful glances at the display. Among the most noteworthy are the card valentines of Prang. Many of these are very beautiful and fully up to the high standard of excellence attained by this celebrated house. Of the regular valentines those of H. & A. Mullord, London, England, are the most attractive. It would be difficult to imagine anything neater and prettier than the goods supplied by this house through its agent here; and, it is to be hoped, the young folk will appreciate the taste and enterprise of the dealers by a liberal patronage, and gladden the hearts of one another by dispatching, at the proper time, these tokens of —to put it in a mild form—esteem.

I. Macdonald, of Jno. Walker & Co., London, England, has finished his trip and left via New York for home. W. King, of Collins, Sons & Co., Glasgow and London, has also about finished. Both report trade good.

The new *Grip* office is drawing on toward completion and also the new premises of Willing & Williamson. I shall take occasion to notice these more fully when completed.

Nisbet, Byron & Co. have had their travelers on the road since the first of last month and are greatly pleased with the success they are having.

A Montreal correspondent speaking of the present healthy state of the commercial body there says that, out of two thousand notes due in the Bank of Montreal on the 4th inst., not one went to protest.

Somebody said recently that Chicago was one of the finest winter resorts in the West, in proof of which he asserts that the cold weather has resorted there since last November. My impression is that the claimants to this distinction are so numerous that it would be difficult to decide what particular place stood in the highest order of merit. Our weather keeper says that during a period of forty years the thermometer has reached a lower temperature on three occasions only, and that the average temperature is lower than we have had it during that period. It is always satisfactory to know that we are getting ahead of former years, thanks to Probabilities, weather sages, cold waves and blizzards. There is a chance for a let up, for we have got back to rain and slush, and may get thawed out before June next. There was one cause of vexation about the long, protracted cold snap: both the elements and the coal dealers seem to have syndicated, and as the price of coal went up the thermometer went down, and so did the supply in the coal bin with alarming rapidity.

J. C. Stuart & Co. have been making alterations in their store, which adds considerably to its appearance.

The Outario government is about closing up the book depository in connection with the Education Department, a thing which the trade has been urging for some time. It served a good turn years ago; but latterly its usefulness consisted mostly in giving employment to a few persons; and as it had the control of the schools and many of their requirements, the trade were unable to compete. At the best, it seemed rather an anomalous state of things to have the government running a large book store; but it has about come to an end, and the trade will at once take hold of the lines of goods they were practically shut out from before. The Canada Publishing Company announces that it has commenced the publication of large school maps—W. C. Campbell managing director.

Last Tuesday evening Barber & Ellis entertained about one hundred of their employees at Thornhill. It was a very enjoyable affair.

C. H.

Stained glass has become quite an important factor in the art decorations of our homes, yet it is a subject not yet fully comprehended; we are prone to overdo the matter by filling the sash with large figured subjects, heavily shaded, abounding in black lines, and generally bordered with many bright and glaring colors; copying the ideas that we are impressed with from noticing the effect produced in churches and public buildings. For domestic purposes stained glass should be used upon an entirely different principle, for it should not be forgotten that light is conducive of health and should not be excluded from our living rooms. Effective windows are made by varying the sizes of the lights of glass and simply filling in with quiet colors, such as amber or wine-color, which do not exclude all the light, but mellows its tone. Many designs are made by leading with irregular lines and into odd shapes, using very pale tints, relieved by bright spots, here and there, of flash ruby or opalescent glass; and designs of this nature are fast taking the place of the heavier stained glass.

Aldus Manutius, of Venice, was the first to print preface in italic, and his example was followed by the early printers, till it became a typographical custom. But as the italic type was never a favorite, it was gradually abandoned for the roman, like the type in the rest of the work, but of a size larger or a size smaller, or even of the same size, but leaded.

There is this of good in real evils—they deliver us, while they last, from the petty despotism of all that were imaginary.

OLD BERKSHIRE MILLS

DALTON, MASS., U. S. A.

One party writes: 'The two hundred RECORD BOOKS, for 83 of the 99 Counties, now on exhibition at the Iowa State Fair, at Des Moines; and all, but four (!) of them, made from your 'OLD BERKSHIRE MILLS LINEN LEDGER,' Medium, 40lb., make a splendid show."

[The above cut is a fac-simile of the wrapper used on the Linen Ledger Paper.]

We will pay for any book rejected on account of fault in the paper. Send for Samples, test them in comparison, and see that your books are made from paper thus water-marked.

OLD BERKSHIRE MILLS

LINEN LEDGER PAPER

Will stand the severest test of COLOR, CLIMATE, INK OR WEAR.

Being **Triple Sized** (a process entirely our own) and **Loft Dried**, can be erased and written upon the fifth time distinctly. None genuine without the water-mark and date, thus—**Old Berkshire Mills Linen Ledger, 1880.**

CARSON & BROWN CO., Manufacturers.

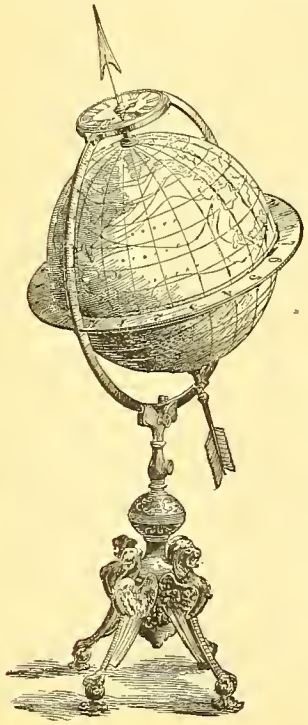
CANAJOHARIE, N. Y.

JUVET & CO.,

CANAJOHARIE, N. Y.

—MANUFACTURERS OF—

Time Globes, Relative Time Globes, Tellurians, Celestial,



AND VARIOUS FORMS OF TERRESTRIAL GLOBES.

The **Time Globe**—see illustration—is not only a perfect geographical globe, but is also a time piece, each part working independent of the other and perfect in both. By means of internal mechanism the Globe is made to revolve once in twenty-four hours—as does the earth. **Universal Time** is obtained **without computation.** It is a **Stem Winder, regulates** from the **outside,** and runs four days without rewinding. Sizes, 6, 12, 18 and 30 inches. Prices $75 to $600, according to size and style of mounting.

The **Relative Time Globe,** while capable of performing **all** the problems of the ordinary **Globe,** gives in addition **Universal Time without computation.** Sizes, 6, 12, 18 and 30 inches, Prices, $35 to $300, according to size and style of mounting.

Tellurians, Celestial and **Terrestrial Globes,** so mounted (new designs) that no part of the map is hidden from view. Sizes, 6, 12, 18 and 30 inches. Prices, $3 to $250.

Above described Globes are **all** made of a new material, which, unlike the old plaster and clay Globes, will not fracture; in fact the shell is so strong and well made that it will be economy to recover in case of geographical changes or injury to the map.

All full Meridian Ring Globes are mounted with swiveled clutch, which allows them to be placed at any desired angle. None but the latest and most perfect maps used.

Meridian Rings are of **Brass,** and **carefully** graduated.

ALL ORDERS WILL RECEIVE PROMPT AND CAREFUL ATTENTION.

L. PRANG & CO.'S
Easter Cards for 1881.

We take pleasure in herewith presenting to the trade our Price List of Easter Cards for this Season:

ASSORTMENT.—Our Easter Cards are made up in sets of one dozen, except Nos. 11 to 19, and are put up in a box or envelope. Each set contains all the designs of the series; and as no series has more than six designs, each design is more or less repeated in the set.

ENVELOPES.—Fine Cream-Tinted Envelopes are furnished with every series, without extra charge.

EASTER CARDS, WITH SILK FRINGES.—We would call especial attention to these, as they will doubtless prove very attractive. These goods are made up with the best quality heavy silk fringe, made expressly for us. All fringed Easter Cards are furnished with Protectors and Envelopes, and are put up with assorted colors of fringes.

LIST OF PRANG'S EASTER CARDS FOR 1881.

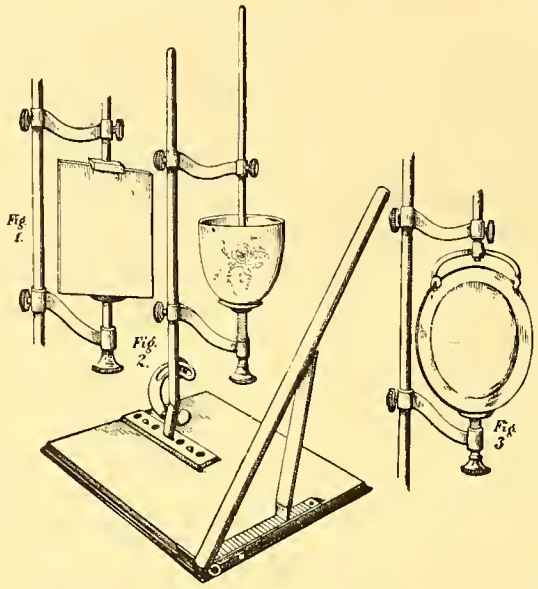
Trade Novelties.

[We will be glad to receive samples of all novelties issued in the trade, and will notice all such which possess merit free of charge. It is desirable to accompany descriptions with cuts whenever possible.]

DECORATOR'S EASEL.

The Decorators' Easel is a newly invented ingenious apparatus supplying a long felt want to artists painting on china, pottery, &c. It is nicely made of japanned iron, with brass attachments and adjustable hand-rest, and permits articles for decoration to be placed at any angle at the option of the artist. The iron easel is firmly screwed in the iron base on the polished walnut table, and the hand-rest hinged to the latter. The illustration shows the various applications. Figure 1 represents the manner of holding tiles and other flat articles; Fig. 2, cups, vases, &c., and Fig. 3, plates and plaques. Any possibility of injury to the tint is avoided, and painting can be done with more safety and accuracy. Cups, saucers, vases, plaques, &c., can be firmly adjusted and held in any position until the painting is completed. For tiles and plates this is said to be an admirable invention, inasmuch as it gives the painter ample opportunity for looking at his work from a picture distance. In this way the work of flower painters will receive much broader effects than if the piece is held in the hand and under the edge of the ordinary hand-rest, as it is now used. Further than this, it will allow the artist to sit erect at his work, and by bringing it nearer the level of the eye, he can get better and more artistic effects of light and shade in his picture than he could possibly get by holding it in the position above mentioned. The easel is manufactured by Janentzky & Co., No. 1,125 Chestnut street, Philadelphia.



DECORATOR'S EASEL.

NEW PATENTS.

No. 237,053. Puzzle Game Board.—Charles J. Schumaker, Allegheny City, Pa.

A puzzle, consisting of a board or sheet, with a series of numbers connected by rectangular and diagonal lines fixed thereon, and of a series of pins or pegs to be placed in the apertures adjoining the numbers.

No. 237,055. Machine for Making Card Board.—Robert Shackleton, Bradford, county of York, England. Filed September 17, 1880.

1. A machine for making card board combining the following elements: Two or more sets of pasting-rolls, pressure-rolls, drying-cylinders, calender-rolls, and cutting devices. 2. The combination of sets of pasting-rolls and their troughs, with an elevated reservoir, stirrer, and distributing-pipes.

No. 237,061. Scrap-Book.—Charles Sneider, New York, N. Y., assignor to Samuel L. Clements and Daniel Slote, same place.

A scrap-book having the leaves thereof coated with adhesive material and provided with superimposed sheets of paper or other material, cut through at suitable intervals in suitable designs, so as to prevent the adhesive surfaces from meeting, and at the same time permit the matter to be secured to the leaves to be attached thereto.

No. 237,067. Printing Press.—John Till, Canton, Pa.

No. 237,068. Canceling Stamp.—Leonard Tilton, Brooklyn, N. Y.

No. 237,103. Inkstand.—Henry D. Forbes, Boston, Mass.

No. 237,111. Paper Bag Machine.—Henry A. House, Bridgeport, Conn., assignor to the Union Paper Bag Machine Company, Philadelphia, Pa.

No. 237,125. Envelope Machine.—Dora A. Plaice, Springfield, Mass., administratrix of George H. Plaice, deceased.

No. 237,139. Fountain Pen Holder.—William W. Stewart, Brooklyn, N. Y.

No. 237,145. Tag.—Francis H. Tobias, New York, N. Y.

A ticket composed of two layers of paper, between which is cemented a wire, having its outer end curved spirally and pointed, and its inner end bent and flattened.

No. 237,163. Book Protector.—George W. Brumm, Boise City, Idaho.

No. 237,184. Pen.—Friedrich W. Holdt, Berlin, Prussia, Germany, assignor to Perry & Co., Limited, Birmingham, England. Patented in England July 16, 1878.

A writing pen one nib whereof is constructed so as to be more elastic than its companion nib.

No. 237,189. Wall Paper Exhibitor.—Frederick W. Jackson, Watkins, N. Y.

No. 237,202. Composing Stick Gauge.—John D. Parker, Kansas City, Mo.

1. In a gauge for composing sticks, rectangular divisions arranged to project correspondingly at each end beyond the outer adjacent one. 2. A gauge for compositors' sticks, made with graduated rectangular divisions on each side of the middle of a plate, corresponding notches being formed at each end of each side.

No. 237,223. Writing Tablet.—George R. Wight, New York, N. Y.

A writing tablet composed of a stiff continuous back piece, a pad of writing paper attached to the upper part of the back piece, and a pad of blotting paper attached to the lower part of the back piece, the lower edge of the upper pad and the upper edge of the lower pad being contiguous, and the two pads forming a continuous and unbroken top surface, the stiff continuous back piece securing the blotting pad in such relation to the writing pad that the blotting pad will form a rest for the hand in writing when the tablet is not used upon a table or other rigid surface.

No. 237,241. Letter File.—Bloomfield Brower, New York, N. Y.

No. 237,254. Device for Giving Positive Motion to Sliders of Printing Presses.—John H. Cranston, Norwich, Conn.

In a printing press, the combination of a reciprocating bed, sliders provided with a series of rollers, and a system of links and levers connecting the bed and the sliders with the press frame.

No. 237,260. Toy Pistol.—George W. Eddy, New Britain, assignor to Edward R. Ives, Bridgeport, Conn., and Cornelius Blakeslee, Brooklyn, N. Y.

No. 237,291. Book-Stitching Machine.—Edmond Keith, Buffalo, N. Y., assignor of one-half to Edward M. Jewett, same place.

No. 237,355. Electric Music Box.—Leonidas G. Woolley, Mendon, Mich.

No. 237,358. Paper Box.—Geo. P. Adams and James Miller, San Francisco, Cal.; said Miller assignor to said Adams.

No. 237,365. Lead and Crayon Holder.—Claes W. Boman, New York, N. Y., assignor to Joseph Reckendorfer, same place.

No. 237,374. Combined Envelope and Letter Sheet.—Jams F. Dodd, Martinsburg, Ohio.

No. 237,384. Lead and Crayon Holder.—Joseph Hoffman, New York, N. Y., assignor to Joseph Reckendorfer, same place.

No. 237,389. Optical Toy.—George E. King, New York, N. Y.

No. 237,413. Sheet Delivery Apparatus for Printing Machines.—Walter Scott, Plainfield, N. J.

No. 237,436. Game Board.—Clarence E. Garrett, Collinsville, Conn.

No. 237,454. Fountain Pen.—William W. Stewart, Brooklyn, N. Y.

No. 237,464. Geometrical Puzzle.—Edwyn Anthony, Hereford, county of Hereford, England.

The employment or use, in a puzzle, of eight right angled triangles, bearing a certain relation to each other in shape and size, dependent upon their construction.

No. 237,493. Admission Ticket.—Frederick H. Cyrenius, Scriba, N. Y.

A ticket divided into sections, each marked for a certain day on which the ticket may be used, and having each of the sections subdivided into two parts for registering, respectively, the number of admissions and number of exits of the holder of the ticket.

No. 237,513. Writing Tablet.—George L. Garrigues, Philadelphia, Pa.

No. 237,531. Lead and Crayon Holder.—Joseph Hoffman, New York, N. Y., assignor to Joseph Reckendorfer, same place.

No. 237,543. Toy Wheel.—John McA. Jones, Philadelphia, Pa.

No. 237,558. Plate Printing Machine.—Homer Lee, New York, N. Y.

No. 237,578. Paper Floor Covering.—Daniel H. Morrison, Philadelphia, Pa.

Paper floor covering to be used in place of carpets, matting, oil-cloth, &c., being applied and put down in the same manner that wall paper is put upon the wall—that is, being fast to the floor—consisting of paper, putty, paste, manilla or hardware paper, wall paper, sizing, and hard oil finish varnish.

No. 237,582. Copy Holder.—Elmer P. Newman, Dimondale, Mich., assignor of one-third to Darwin F. Emens, Rochester, N. Y.

No. 237,584. Combined Paper Weight and Calendar. George A. Cole, Baltimore, Md.

A combined paper weight and calendar, which consists of a cubical block having its six sides figured and lettered for different days in the week throughout the year.

REISSUES.

No. 9,557. Mounting and Attachment for Terrestrial Globes.—Ellen E. Fitz, St. John, New Brunswick, Can. Original No., 158,581, dated January 12, 1875.

No. 9,560. Type Distributing Machine.—Dexter Reynolds, Albany, N. Y. Original No., 192,281, dated January 19, 1877.

AWARDED HIGHEST MEDAL AT VIENNA AND PHILADELPHIA.

PERFECTED STYLOGRAFIC.

The original and genuine Pen. Warranted the best made. Thirteen Patents granted to **A. T. CROSS,** the last, June 29, 1880, being the most important and giving the name **Perfected.** All cuts are exact size

MAXIMUM.—Holds most ink of any pen made; tires the hand less than smaller barrels. Fits Hambler's Pocket. Same price as Long.

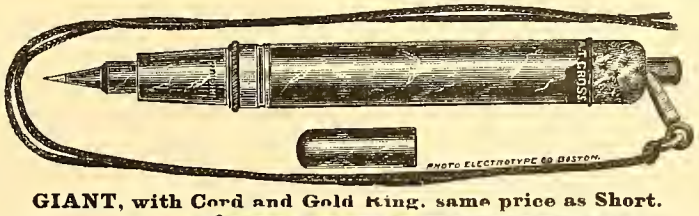
LONG.—The famous Desk Pen. Extra long. Holds most ink, except the **Maximum.**

SHORT.—Most widely known and sold heretofore; but Maximum is better for desk

or Hambler's Pocket, Giant for Vest Pocket or Cord. So this will be largely superseded.

Thirteen patents granted; seven more applied for; more genuine improvements; better record; more styles; larger stock; more thoroughly protected by patents than all rivals combined.

☞See Descriptive Circulars.



GIANT, with Cord and Gold Ring, same price as Short.

Dealers and agents supplied with wood, glass and paper signs, placards, circulars, leaflets and cuts. We make both largest and smallest Pens, both of which will have all new improvements.

☞See Descriptive Circulars.

VEST GIANT, Plain, - - $2.50.

All Styles up to $4.00.

☞ **VEST GIANT.—The Cheapest PERFECTED Pen made.**

This Miniature Cut is for Agents' Cards, Newspaper Advertisements, &c., &c., &c.

Trade Gossip.

All new goods and designs which are not, strictly speaking, "Novelties" will be noticed under this head. The trade are requested to forward descriptions with samples in order to secure proper notice.

A. J. Pulsford, representing De La Rue & Co., London, is in town.

C. H. Codman, Boston, and J. W. Grove, Pittsburg, Pa., were in town, during the week.

Robert J. Lester, with J. H. Bufford's Sons, left, on Wednesday, for an extended Western trip.

Schenk & Schlichte, New York, have removed their paper box factory to Nos. 93 and 95 Sixth avenue.

The attention of the trade is invited to a card of McCarty & Hasberg in another column. It is in relation to import orders.

The new quarters of A. Weidman & Co., 306 Broadway, are elegantly fitted up. The firm is now ready to receive its friends there.

A. H. Goetting has just imported a new line of photograph albums, samples of which will be shown to the trade for the purpose of taking import orders.

Potsdamer & Co., 321 Chestnut street, Philadelphia, Pa., have ready four new sets of folders. No. 20, size, 6¼ by 8; No. 21, 7¼ by 5⅝; No. 22, 5 by 5½; No. 23, 4½ by 7, three folds.

Myers Brothers have received this week a large consignment of De La Rue's Easter cards. As the valentine season is about over, the firm intends to push the Easter goods with *vim*.

Matthews & Co., 1,202 Chestnut street, Philadelphia, have got out a "Rustic" calendar stand and pen rack, which is very neat and ornamental for desk use. It comes in bronze, silver and gold.

D. H. Matson, bookkeeper for the late firm of Cross, Gibson & Laimbeer, New York, has been appointed receiver to collect all claims due them, and to settle up the business. His office is located at 92 William street.

The orders for folding cards for both old and new styles and sizes are so heavy that Potsdamer & Co., Philadelphia, are again compelled to bring out their hand presses to keep their customers supplied with their elegant commercial work for office use.

T. B. Peterson & Brother have just published a translation of Adolphe Belot's story, "The Black Venus," which is the foundation of the spectacular play now being performed at Niblo's Garden, New York. It is called one of the most remarkable works of the day. The statement is not far out of the way. There is in it an improbable romance, a French idea of leaping over difficulties, and a very indefinite and mythical description of equatorial Africa and its inhabitants.

Samuel Carson, 120 Sutter street, San Francisco, has published the third edition of the "Sazerac Lying Club," by Fred. H. Hart. This work was originally published by subscription, but the new editiou is for the trade. It is an octavo of 240 pages, with illustrations, and will sell at 50 cents in paper covers or $1 in cloth. This aggregation of wonderful stories, which most people would call lies, is presented as one of the most truthful records; in fact, every lie is said to be true—a statement which may or may not be a paradox.

S. R. Wells & Co. have published "Reminiscenses of Dr. Spurzheim and George Combe," a review of the science of phrenology from the time of its discovery by Dr. Gall, to the time of the visit of George Combe to the United States, in 1838-40, with a new portrait of Spurzheim. By Nahum Capen, LL. D. While "Reminiscenses" does not purport to be a treatise on mental science, it is not wanting in argument and authority for the system Dr. Spurzheim taught; and so clearly and candidly discusses the questions naturally arising in its course, in the relation of the brain to the mind, and the philosophy of human character, that it is a very instructive volume aside from his biographical specialty.

J. H. Bufford's Sons show this week several new series in chromo cards, which are designated as Nos. 600, 640, 650, 740, 760 and 780. No. 600 includes four designs in cats' heads; 640 represents a series of views along the Hudson River; 650 is a dancing girl series in four designs, on enamel board; 740 represents ladies rowing in canoes; 760 is a harvest and flower series, and 780 shows four different designs in dog's heads. All of the designs have spaces for advertising purposes. This house is also adding to its line of engraved folders a number of new designs, and has just introduced a neat line of illuminated folders, in twenty styles, for orders of dance.

Charles Cohen, Philadelphia, has been offering for several weeks an excellent line of stationery at prices very much below cost, so as to close lots. The assortment embraces copying books, penholders, paper weights, papeteries, rulers, inkstands, files and other goods. Many of the trade have purchased from this offer, and are said to have expressed satisfaction with the bargains secured. Mr. Cohen says that the assortment is still unbroken, and that this offer is one every dealer should take advantage of.

I. H. Hamburger has arrived from Europe, where he has been for the past two months selecting goods. He reports business more brisk on the other side than at this time last year, and says intending buyers should make their selections early if they wish to secure suitable goods. Mr. Hamburger further remarks that English dealers have bought largely this season in Germany.

Potsdamer & Co., 321 Chestnut street, Philadelphia, call attention to their advertisement in THE STATIONER, giving the names of their agents. Dealers can buy of the nearest agent at the same figures and same freight as they can of the publishers.

The toy shop of A. B. Ruggles, in Birmingham, Conn., owned by Willington Shelton, was destroyed by fire on Sunday. The loss is estimated at $10,000. The machinery was insured for $3,000.

The American Crayon and Slate Company, 39 Dey street, is said to be making a big "gap" in its stock of Blue Ridge school slates at the "Gap," and that the cry is, "Still they come."

The firm of Butler & Moorhouse, paper manufacturers, Philadelphia, Pa., has been dissolved by the death of James Butler. Walter Moorhouse will settle all accounts.

Tackaberry, Joselin & Co., wholesale dealers in fancy goods, Toronto, Ont., have dissolved partnership. R. J. Tackaberry continues.

Jacob Richman, dealer in fancy goods, Providence, R. I., is offering to compromise at twenty-five cents on the dollar.

Jacobs & Wineburgh, dealers in fancy goods, San Francisco, Cal., have dissolved partnership.

T. E. Palmer, news dealer, etc., Harlan, Iowa, has failed.

H. Rauth, printer, St. Louis, Mo., has been burned out.

William Steele, bookseller and stationer, San Jose, Cal., is dead.

Geo. W. Park, publisher and printer, Mount Vernon, O., has sold out.

H. G. Armstrong, publisher of the *Republican*, Mount Vernon, O., has sold out.

Wallace & Hassett, printers, San Francisco, Cal., have dissolved partnership.

The *Republican*, Woodland, Cal., and the Yolo (Cal.) *Mail* have been consolidated.

Tukesbury & Co., dealers in fancy goods, Portland, Me., have dissolved partnership.

H. Keller & Co., book publishers, &c., San Francisco, Cal., have dissolved partnership.

Tomkins, Hewit & Barrie, stationers, Sydney, New South Wales, have dissolved partnership.

Manilla and other school bags can be had at low figures at Henry Levy & Sons', 477 Broadway.

H. L. Thurber, dealer in periodicals, stationery, &c., Pawtucket, R. I., has sold out to Jas. L. Martin.

Tobin, Davisson & Co., wholesale dealers in fancy goods, San Francisco, Cal., have dissolved partnership.

Clark & Allen, manufacturers of paper bags, Rochester, N. Y., have dissolved partnership. F. W. Clark continues.

J. S. Cameron & Co., publishers of the *Free Press*, Carrollton, O., have dissolved partnership. John H. Tripp succeeds.

C. H. Pendexter & Co., fancy goods dealers, Lewiston, Me., have dissolved partnership. C. H. Pendexter continues.

A fire in J. M. O'Laughlin's book store, St. James street, Montreal, on Thursday night, damaged the store $3,000, which is insured.

Anson D. F. Randolph & Co., booksellers, New York city, have dissolved partnership. Anson D. F. Randolph continues under same style.

Baker Brothers, stationers, &c., Fitchburg, Mass., have dissolved partnership. A. Warren Baker, Jr., and E.N. Cummings continue under old style.

A new stationery firm has been formed at 126 and 128 Duane street, under the style of Hard & Parsons, consisting of Bradley A. Hard, formerly of May, Hard & Co., and Samuel Parsons, the latter gentleman making his *début* in the trade.

H. H. Carter, 3 Beacon street, Boston, is agent for Marcus Ward's cards. He did a very heavy holiday trade, and now has his travelers on the road with Easter goods, who report their sales far in excess of last year. This house handles Dixon's pencils, and claims to have sold more of them than any Eastern house.

The draft of a proposed international copyright treaty between Great Britain and the United States, recently submitted by Minister Lowell to the English Board of Trade, after a conference of authors and publishers, by whom it was freely discussed, received three amendments. They were to the effect that the limit of time within which a book must be republished in order to secure copyright should be extended from three months to six months; that the provision requiring the manufacture of books to be in the country of publication should be confined to the United States, and that all prints or reprints of books by English authors, published in the States with their consent, should be freely

admitted into England and all parts of the Empire.

The Woonsocket, R. I.. *Patriot* is to be sold at auction.

Edward Niles, publisher of the *Times*, Carson City, Nev., has suspended.

J. W. Burson, publisher of the *Herald*, Denison, Texas, has been burned out.

Mrs. L. E. Gagne, fancy goods dealer, Biddeford, Me., has sold out to D. S. Bullock.

Albert Cogswell, of the firm of A. Cogswell & Co., publishers, New York city, is dead.

H. I. Nelson & Co., dealer in fancy goods, Portland, Me., has been burned out. Insured.

Nugent & Steves, dealers in wrapping paper, New York city, have had their stock damaged by fire.

Sullivan & Vinton, publishers of the *Chronicle*, Cambridge, Md., have been burned out. Not insured.

Harry Gove, fancy goods dealer, Methuen, Mass., has had his store robbed of several hundred dollars.

L. H. Porter, printer and publisher of the *Monitor*, Waterbury, Conu., has sold out to I. Henry Morrow.

L. E. Tisdale, dealer in notions and stationery, Rayville, La., has changed the name of his firm to Tisdale Brothers.

Mr. Williams, of Scranton, Pa., and Mr. Thorp, of Winkley, Thorp & Dresser, Boston, were among the visiting members of the trade this week.

R. Fideau, 16 Beekman street, is daily filling large orders for his "Unparalleled" school bags, which are fast becoming very popular. Mr. Fidean had application made to him last year from Brazil for samples of the Nos. 1, 2 and 3 bags, which he furnished, and last week he received an order for fifty gross of them.

A meeting of the Copyright Association took place on the 8th inst. at London, Anthony Trollope and representatives of all the leading publishers being present. Resolutions were passed generally approving the American proposal for a copyright treaty, but advocating the extension of the time within which English books should be published in America to six months, and condemning the suggestion of the British Board of Trade that American reprints, with the author's consent, be freely admitted to England.

Hasbrouck & Watson have purchased and now hold the control for the United States and Canada of all of the patent rights for the well known M. & H. blotter tablets. They take hold of this business just where J. S. Robinson left off, and propose making a thorough success of it. The popularity of the tablets is an established fact. The goods are widely advertised and largely used, and as they present paper in an attractive shape, the extent of the business may easily be conjectured. The firm intends to use good materials, and proposes putting out the most complete assortment of blank stock ever yet offered to the trade. Its list will comprise every form in general use, affording the stationer advantages of supplying his customer with everything he may require in the way of "paper" from one line of goods. The compactness in the style of putting them up obviates the breaking of packages. The goods keep nicely on the shelves. When a customer wants a few sheets or blanks, the stationer can sell him a large or small quantity and in an attractive shape. The convenience of the blotter is said to be incalculable, and the pleasure of always having clean paper to write on is inestimable.

Tower's writing and copying inks are having a largely increased sale. The manufacturers claim for it valuable qualities, viz., the color is warranted permanent, it flows from the pen with the greatest freedom, and its copying qualities are excellent in the highest degree. Those who desire to use a uniform standard ink are simply asked to try this ink. They also make a specialty of black ink, which has the long sought qualification of flowing black from the pen; also carmine and violet and marking inks. Office, 3 Beacon street, Boston.

F. L. Morling, of F. L. Morling & Co., publishers of the *News* and job printers, Woodberry, Md., has applied for relief under the insolvent act.

Farquhar & Hartley, dealers in fancy goods, Paterson, N. J., have dissolved partnership. William Farquhar continues.

The Worcester Paper Box Company, Worcester, Mass., has gone into insolvency.

Frederick Schaefer, bookseller and stationer, Pekin, Ill., has made an assignment.

A fair compensation for honest service is the best service you can make a man, and the best gift he can receive.

OBITUARY.

Samuel G. Bass.

Samuel G. Bass, junior member of the firm of J. S. Rockwell & Co., of this city, manufacturers and importers of bookbinders' leather, died at his residence, 137 Henry street, Brooklyn, on Tuesday night, aged about forty-five years. Mr. Bass was born at Colebrook, Conn., and twenty-three years ago entered the house of J. S. Rockwell & Co. as a clerk, and in 1863 he was made a partner in the firm, and continued as such up to the time of his death. He had been attending to business and enjoying unusual good health until a week or ten days ago, when, complaining of indisposition, he subsequently remained at his home. The immediate cause of his death is believed to be heart disease. Mr. Bass was a gentleman highly respected in the business community for his sterling qualities. He was a member and regular attendant of Plymouth Church, Brooklyn, and leaves a widow. The only surviving member of the firm is George Whiting, the founder of the house, James S. Rockwell, having died about two years ago. Mr. Bass' funeral took place to-day at 12 o'clock from his late residence, and his remains were taken to Colebrook, Conn., for interment.

THE STATIONER.

DEVOTED TO THE INTERESTS OF THE

Stationery and Fancy Goods Trades.

WEEKLY---$2.00 PER ANNUM.

Single Copies - - - - 10 Cents

NEW YORK, THURSDAY, FEBRUARY 17, 1881.

Advertisements cannot be received for insertion in the current week later than 12 M. on Wednesday. The charge for advertising is 25 cents a line, each insertion. Special terms for standing and displayed advertisements to be had on application.

This journal aims to be a medium of information for and a representative of the interests of every one connected with the stationery and fancy goods trades. It contains a full and trustworthy survey of the market for stationery in this country, in all cases giving the actual prices at which goods can be bought of importers and jobbers in this city, together with a detailed account of novelties in the trade, patents relating to stationery, and current items of interest. A review of foreign markets and accounts of movements abroad will also be furnished, and no pains will be spared to make THE STATIONER a thorough and complete exponent of the trade.

Subscription and postage for Great Britain, per annum..... 12s.

Any information our readers may wish to obtain shall be cheerfully given, and prompt replies will be made to all inquiries addressed to us on any subjects of interest to the trade.

Communications on all trade matters are earnestly solicited. Address

HOWARD LOCKWOOD, Pres. and Treas.
American Stationer Association,

Subscribers to THE STATIONER can be supplied with the best cloth binder in the market. Deliverable at the publication office. Price, fifty cents.

Readers of this paper who avail themselves of the information obtained from its columns, by advertisement or otherwise, are requested to notify their correspondents of the source of their information.

OF late years, the fashionable observance of St. Valeutine's day has been falling into desuetude. If anything can revive the old custom and bring it again into universal favor, it will be the elegant fancies which have been brought forth this year.

WHILE the old style valentine has many good points, when taste and art combine in its perfection, it seems to have reached its limit as to design, and to have become, however beautiful, a set form, of which people weary. Its stiffness might be relieved, perhaps; but taste is running in other directions, in which there is so great an opportunity for change and variety that the field is almost illimitable.

CARD fancies this season show how exacting the demands of buyers are, and prove that the manufacturers are fully alive to the necessity for novelty and improvement. Valentine cards this year are the most beautiful presentatiou gifts of their class that we have ever seen. Some of the Easter samples are equally fine, but we wait to see what the different competing houses have to offer. We have heard that the London firms propose to outdo all former efforts. They need to, for we are sure that their German and American rivals do not propose to be last and least in the competition —not if they can help it.

IT will be observed that one of our correspondents, whose contributions to THE STATIONER are always interesting and valuable, takes up the subject of one of our recent articles and gives a very practical turn to the precept of honor in trade. His suggestion is excellent, not that he proposes to offer a premium for honesty—which ought to be beyond price,—but because he desires to lay the foundation of an honorable ambition and noble emulation among the juniors of the stationery trade. He suggests that the Board of Trade shall charge itself with the duty of offering prizes to those clerks and employees in the stationery trade who shall demonstrate their fitness, capacity, good character and gentlemanly standing under a system of rules or competition, in which the merits of candidates for prizes shall be gauged in a business way and not according to a sham formulary. We do not know whether the Board of Trade will feel itself equal to this task, since it has modestly deprecated its powers and capacity in matters of important and active interest to the trade. But let us suppose that it will undertake it. Our readers can see that much good can be effected and an honorable rivalry excited under the plan proposed, and the Board of Trade can hold a paternal relationship to the trade quite as creditable as any position it has heretofore assumed. Our correspondent offers to contribute his check for a reasonable amount in support of his proposition, or, if another method of defraying expenses should be resorted to, he will give a lot of fresh, salable goods, the proceeds of which may be devoted to the same object. He is a member of a firm which is, we believe, now represented in the Board of Trade; and although spending a great portion of his time abroad, is interested in everything that concerns our trade, and takes pride in his vocation. Is it too much to ask the Board of Trade to act on this proposition? Come, let it do something.

Communications.

[Correspondents are requested to write on only one side of their paper. No responsibility for the opinions of correspondents attaches to this paper.]

DOING A GOOD BUSINESS.

ATLANTA, Ga., February 11, 1881.

To the Editor of The Stationer:

We notice, in your issue of the 3d inst., a roving correspondent attempts, *currente calamo*, to "do up" the book and stationery trade of Atlanta. In that communication we are represented as "not having done as well as usual" and as being dissatisfied with the January business. As we are not in the habit of obtruding our private affairs upon any one, probably we did not pump as readily as some others; hence the error of your correspondent and the injustice done us.

The facts are simply these. Notwithstanding "two new firms have made their appearance," our business for 1880 was 25 per cent. greater than that of any previous year, while last January—a month of perpetual rain—showed an increase of 10 per cent. over the corresponding month of the previous year.

With this result and with the present outlook we are abundantly satisfied. We believe the trade generally was never in a more prosperous condition. Very truly,

PHILLIPS & CREW.

HONOR IN TRADE.

BERLIN, Germany, January 31, 1881.

To the Editor of The Stationer:

In your No. 52, page 17, you have an article headed "Falsehood in Business," which is very good, and the facts contained in the same cannot too often be impressed on the mind of business men, particularly of new beginners. I have known a young man in the stationery trade who, when he started for himself, told me that in trade and in war everything was fair. I told him that honor in trade, as well as in anything else, ought never to be disregarded. It was not many years before he had lost his credit and his business also, and died a poor man.

There are, however, other falsehoods in trade besides those you mention, and they are worse than false weights and false counts, against which you can guard by reweighing and recounting the goods when received, and these are imitating labels and copying designs and patterns of other parties, and the property of such parties. This, I am sorry to say, is carried on to a great extent by a certain class of tradesmen, who are not able themselves to get up a new design, or who do not want to pay an honest price to those who can get them up for them.

Now, to encourage fair and honorable dealing and to reward capacity and good behavior among the employees of the trade, I propose that the Board of Trade shall award prizes and distribute them annually, either in medals or in money, accompanied by a handsome diploma to those most deserving. This, as I said before, will be a great encouragement to the employees, and will certainly be the best recommendation in case they are compelled to change their em-

ployment; or in case they wish to start for themselves it will entitle them to credit to a great extent. Society is ever ready to punish crime and bad behavior, but is very slow in rewarding virtue and upright dealings, and how much better would it be to spend the money for such purposes than to spend it in building prisons and workhouses. And will it not benefit the employers also by creating a strife among the hands to be the best of the best?

If the Board of Trade will take this matter in hand, and appoint a committee, say of five, including the president, I do not think it would be a very difficult task to come to an understanding. The claims for award ought to be very carefully considered by a committee, and when handed in ought to be certified to by the employers of the respective persons. They should also be supported by proofs of capacity, steadiness, truthfulness, punctuality and good character. Whenever the committee is ready to receive contributions my check will be ready also; or, if they should conclude to get up a fair for the purpose of raising funds, a handsome, salable lot of goods shall be at their disposal.

Here, in the old country, everything goes on in its slow old way, much talk and little enterprise, much imagination and little reality. There is any amount of money ready for new guns and cannons, but very little for purposes to advance the welfare of the people and to assist trade and commerce. They are projecting now a World's Fair in 1886; but I hardly think there will ever be such a thing here, unless they can calculate beforehand that there is something to be made by it in the way of profits. In the stationery trade every one is looking to America for business, and every one is expecting plenty of it in the new year. Last year's trade was very good.

Before I close I wish to impress on the minds of our young folks to beware of too much pleasure seeking. Recreation is necessary after a good day's work, but there are many ways to enjoy one's self. Some kinds of pleasure are too expensive and are injurious to the health also, while some are useful and do not cost much, while they improve the mind. I would recommend the study of some mechanical art in leisure hours. This gives the mind a practical turn, which is ever useful in every position of life, and an inventive genius may obtain some very good results. The princes here all learn some trade. The Prince of Wales, they say, is a right good carpenter, and the Crown Prince of Prussia is a cabinet maker, which every one can see by looking at the chair in his father's sleeping room, in Babelsberg, which he made and presented to the old gentleman as a birthday present.

PAPER MAN.

ANSWERS TO CORRESPONDENTS.

W. B. C. & Co. asks: 1. What is the best manner of sampling or keeping ink in all sizes of bottles for retailing from? 2. Does any one make a rack or showcase specially adapted for the purpose?

Ans.—1. Some of the most experienced stationers keep a sample of each size of bottle of each manufacturer's ink in separate compartments. If there is any specially good way different from this, perhaps some of our readers who are posted on it will answer the question. 2. Some of the manufacturers of inks have racks or showcases made, one of which they generally present to customers or to those who handle their goods.

H. T. C. puts the following statement and inquiries: A manufacturer employs a traveling salesman, paying him a commission on his sales with no other compensation; the firm gives the salesman a list of customers to sell to 1. If one of these customers fails and the bill is lost, is it the fault of the agent, and should the firm refuse to pay him commission on the sale? 2. If a customer returns the goods, claiming that they are so inferior to the sample upon which he bought that he cannot use them, ought the agent to lose his commission on the sale? 3. If the firm is slack and does not ship goods promptly and the customer returns them on the ground that they came to hand so late that he could not use them, ought not the agent to be entitled to his commission? In these cases it is understood that the salesman did not guarantee sales, and that no other conditions were stipulated, the firm having confidence that the man would exercise his best judgment in all matters.

Ans.—The points presented by our correspondent are questions of law; the facts of sale may be accepted as beyond dispute. It is a sound maxim of law, however much some of our judges may set it at defiance, that law is based on common sense. In the absence of statutory provisions which might prescribe certain limitations to contracts, the common law or *lex non scripta*—that founded on common sense—must prevail. If the firm accepted the order sent in by the salesman the sale was effected. If the debtor failed, he was still liable on his contract to the firm, and the latter to the agent, the only question in this case being which party stood the best chance of getting his money. Again, a party is bound by his own *laches* (*i. e.*, errors or frauds); if the goods sent are not up to sample, the agent is not to blame and should not suffer, and the firm's neglect to perform its duty and its delay in forwarding goods does not vitiate its contract with its employee. We, therefore, answer our correspondent's inquiries as follows: 1, No; 2, No; 3, Yes.

A remarkable novelty for staining through any porous substances, such as wood, paper, papiermaché and numerous other articles, has been invented by H. C. Webb, of the Worcester tileries, Worcester, England. The most elaborate patterns, both as to color and form, can be stained through such substances to the depth of 1½ inches or more, the lines of the patterns being preserved clearly and perfectly. In the case of wood for floorings the pattern is as clear on the under side of the slab or tile as on the upper, only slightly weaker in color. One hundred sheets of paper can be printed in twenty colors at one operation in two or three minutes. For rooms, halls, churches, law courts and buildings where quietude is necessary, the new wood tile is invaluable, and doubtless there is a great future for the invention.

Market Review.

OFFICE OF THE AMERICAN STATIONER,
WEDNESDAY, February 16, 1881.

THE MONEY MARKET.—The monetary situation continues to be characterized by ease. On pledge of stock collateral the rates ranged between 4 and 5 per cent. The prevailing quotation, with United States bonds as security, was 3 per cent. Time loans were effected at 3@5 per cent. In the discount market, prime mercantile paper ruled at 4@5 per cent. On the stock exchange the chief characteristics of the speculation were strength and activity. Early in the week the market presented a somewhat unsettled aspect, and a portion of the list recorded a slight decline in prices. The depression, however, was only temporary. The government bond market was strong in tone and was fairly active, all the issues show an advance in prices, new 4's selling up ⅝@¾ per cent., 4½'s, ⅛@⅜ per cent., and 6's and 5's ⅛ per cent. In railroad mortgages a brisk demand prevailed for the leading issues, and almost all the bonds traded in show an advance. The market for foreign exchange was very firm. The posted rates for prime bankers' sterling were advanced to 4.83½ and 4.86½; the actual rates are 4.82¾@4.83 and 4.85½@4.86; cable transfers are 4.86@4.86½, and prime commercial bills are 4.81¼ @4.81¾.

THE PAPER MARKET.—There is no improvement to note in the movement of paper in the hands of either manufacturers or the jobbing trade. Jobbers, as a general thing, having supplied their early requirements, are now moderately engaged in the delivery of goods on old orders, many of them given by consumers late last year. In the line of coarse papers the ice has interfered with the running of many of the mills, and an advance in prices has been urged; but as we have had a thaw in the past few days, nothing will be likely to come out of this movement. The stock of light weight straw wrappings has become very much reduced in this market, and it is asserted that it would be difficult at this time to fill an order for 10,000 reams, which, for export, would be considered of moderate size. Notwithstanding the fact of its scarcity, and of an organization existing among the manufacturers pledged to sustain prices, it is openly asserted that, through strong competition, manufacturers permit the commission dealers, who handle most of their product, to undersell one another, and it is said to be an exception rather than a general thing that dealers confine themselves to the schedule of prices agreed upon.

THE STATIONERY MARKET.—There is no new feature to trade this week. The work of preparation for spring business still goes on actively, and the indications point to its gaining some headway in another fortnight. Business has been more or less retarded by seasonable influences. Although in this vicinity during the present week the weather has been propitious, that in most parts of the North and West, and in some sections of the South, was about the worst during the winter. The season is so far advanced, however, that such weather as we have had recently cannot prevail much longer, and when the change for the better does come, it cannot but quicken business activity in every direction. Orders for Easter cards are being received for large quantities, and dealers generally appear encouraged with the trade they have had so far, and which promises to keep up for several weeks to come. No changes have been made in the prices of staples that we are aware of.

PRANG'S EASTER CARDS.

Prang's new Easter cards are very elegant, and, it is asserted, the finest ever shown in this market. No. 1, called the "Daisy Egg," is an elegant present in book form, having a neat protector, with a white paper covering showing the words, "Easter greeting." On opening this cover a large egg, composed of daisies with a band of violets diagonally encircling it, is seen on a light blue ground. The two inside pages, on a light buff ground, very tastily decorated, present two seasonable poems, and the back, on a sky blue ground, shows a number of butterflies floating in the air. The whole is held together by a heavy silk string and tassels. No. 1 F shows the same card ornamented with a broad, heavy satin fringe.

No. 2, Easter Dove, is quite a large card, size 7 by 9½, and is beautifully designed and finely executed. It represents a storm-clouded sky, in which a graceful dove is flying towards the clearing clouds in the east, where, in a bit of blue sky, a rainbow appears. The whole design is emphatically an Easter design and conceived in excellent taste. No. 2 F shows the same card, ornamented with cord and tassel, to allow it to be suspended, and silk fringe all around it.

No. 3 shows two designs—Easter chariot and Easter boat. A broken egg filled with daisies represents the chariot, and is drawn by two little chickens, the traces being formed by grass; the boat is formed by a broken egg floating on a lily pond, and filled with forget-me-nots and lilies of the valley; a calla lily forms the sail, and a little chicken appears as the central figure. Both these designs are very handsome. No. 3 F shows the same two designs, with silk fringes. No. 4 presents two tasty and delicate designs—one showing a bouquet of daisies, the other a bouquet of white pansies on a sky-blue ground. This is a folding card, and the other sides show butterflies. No. 4 F shows the same two cards, with satin fringe, and an exceedingly tasty outside cover in tints. No. 5 exhibits four large panel-shaped floral designs, and is tasty and appropriate. No. 5 F is the same, with fringes. No. 6 presents four iris designs. This card is a double folder, with ornamental outside and a novel and peculiar combination of colors on the inside. No. 7 shows six designs of large gold crosses and flowers, on a drab and light green ground. No. 7 F shows the same, with silk fringe. No. 8 is a very striking card. On a light green ground, ornamented on either side, with a pretty lithographed border, four floral designs are shown in a gold field. The lettering is quite large and very tastily arranged. No. 8 F is the same with fringe. No. 9 is a large panel-shaped card showing two lily designs, one white, the other a Japan lily. No. 9 F is the same card with fringes, showing the two designs on face and back. No. 10 consists of two fine figure designs in antique style. No. 10 F shows the same two designs with fringes, one on the face, the other on the back. No. 11 consists of six designs of crosses and flowers, and is offered in four different styles, viz., as single cards and single cards with fringe, and as double card and double card with fringes. No. 12 is 4 by 6½, and in design rich and effective. On a light green ground, in a gold field, four floral designs appear, sprays of daisies, of white pansies, of passion flowers and of lily of the valley and violets. No. 12 F is the same with silk fringe. No. 13 is an Easter card for children and particularly designed for this purpose, and is offered in four styles, viz., single cards, single cards with fringe, double cards and double cards with fringe. No. 14 shows four designs of morning glories,

white pansies, crocus and fleurs-de-lis on a moss ground. No. 14 F has the same designs, with fringes, in 14 D in book form, and in 14 DF in book form, with fringes. No. 15 is offered in the same four styles, and also shows four floral designs on a moss ground. No. 16 shows four very fine designs of ferns and eggs, and is also offered singly, with or without fringe, and in book form, with or without fringe. No. 17 shows two designs in cheap cards, but tasty and delicate. No. 18 shows six floral designs on gold ground, and No. 19 eggs and feathers. Both of these, though cheap, are attractive. Quite a number of these cards will also be mounted on heavy gilt-edged board, and will make attractive panels and handsome Easter gifts.

L. Prang & Co. have made a great effort in this line of cards, and have been very successful in their selections. Samples of Easter cards are now ready, and stock can be delivered soon after March 1. Attention is called to the price list on another page.

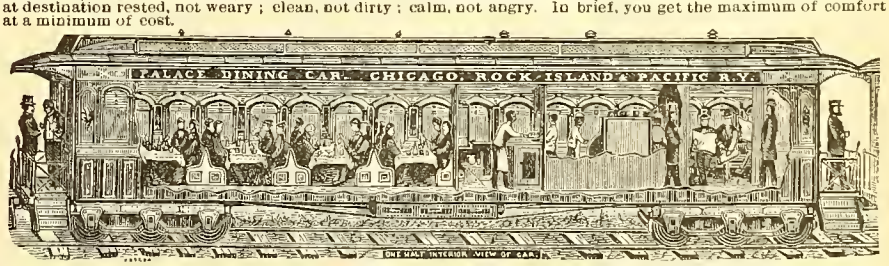
"THE GREAT ROCK ISLAND ROUTE"

Calls your attention to the following REASONS WHY, if about to make a Journey to the GREAT WEST, you should travel over it:

As nearly absolute safety as is possible to be attained. Sure connections in UNION DEPOTS, at all important points. No change of cars between CHICAGO, KANSAS CITY, LEAVENWORTH, ATCHISON or COUNCIL BLUFFS. Quick journeys because carried on Fast Express Trains. Day cars that are not only artistically decorated, but furnished with seats that admit of ease and comfort. Sleeping cars that permit quiet rest in home-like beds. Dining cars that are used only for eating purposes, and in which the best of meals are served for the reasonable sum of seventy-five cents each. A journey that furnishes the finest views of the fertile farms and pretty cities of Illinois, Iowa and Missouri, and is afterwards remembered as one of the pleasant incidents of life. You arrive at destination rested, not weary; clean, not dirty; calm, not angry. In brief, you get the maximum of comfort at a minimum of cost.



That the unremitting care of the Chicago, Rock Island & Pacific Railway for the comfort of its patrons is appreciated, is attested by its constantly increasing business, and the fact that it is the favorite route with delegates and visitors to the great assemblages, political, religious, educational and benevolent, that assemble from time to time in the great cities of the United States, as well as tourists who seek the pleasantest lines of travel while *en route* to behold the wonderful scenes of Colorado, the Yellowstone and Yosemite. To accommodate those who desire to visit Colorado for health, pleasure or business, in the most auspicious time of the year, the Summer season and months of September and October, the Company every year puts on sale, May 1st, at all coupon ticket offices in the United States and Canadas, round trip tickets to

DENVER, COLORADO SPRINGS AND PUEBLO,

At reduced rates, good returning, until October 31st. Also to San Francisco, for parties of ten or more, good for ninety days, at great reduction from regular fares.

REMEMBER, this is the most direct route for all points WEST and SOUTHWEST. For further information, time-tables, maps or folders, call upon or address

R. R. CABLE,
Vice-Pres't and Gen'l Man'gr, Chicago.

E. ST. JOHN,
Gen'l Ticket and Pass'r Agent, Chicago.

BRAZING AND SOLDERING.

The term *soldering* is generally applied when fusible alloys of lead and tin are employed. When hard metals, such as copper, brass or silver are used, the term *brazing* (derived from brass) is more appropriate.

In uniting tin, copper, brass, etc., with any of the soft solders, a copper soldering iron is generally used. This tool and the manner of using it are too well known to need description. In many cases, however, the work may be done more neatly without the soldering iron, by filling or turning off the joints so that they fit closely, moistening them with soldering fluid, placing a piece of smooth tinfoil between them tying them together with binding wire and heating the whole in a lamp or fire till the tinfoil melts. Pieces of brass are often joined in this way so that the joints are quite invisible. Indeed, with good soft solder almost all work may be done over a lamp without the use of a soldering iron.

Advantage may be taken of the varying degrees of fusibility of solders to make several joints in the same piece of work. Thus, if the first joint has been made with fine tinner's solder, there would be no danger of melting it in making a joint near it with bismuth solder, composed of lead, 4, tin, 4, and bismuth, 1, and the melting point of both is far enough removed from that of a solder composed of lead, 2, tin, 1, and bismuth, 2, to be in no danger of fusion during the use of the latter.

Soft solders do not make malleable joints. To join brass, copper or iron so as to have the joint very strong and malleable, hard solder must be used. For this purpose equal parts of silver and brass will be found excellent, though for iron, copper, or very infusible brass nothing is better than silver coin rolled out thin, which may be done by any silversmith or dentist. This makes decidedly the toughest of all joints, and as a little silver goes a long way, it is not very expensive.

For most hard solders borax is the best flux. It dissolves any oxides which may exist on the surface of the metal and protects the latter from the further action of the air, so that the solder is enabled to come into actual contact with the surfaces which are to be joined. For soft solders the best flux is a soldering fluid which may be prepared by saturating equal parts of water and hydrochloric acid (spirit of salt) with zinc. The addition of a little sal ammoniac is said to improve it. In using ordinary tinner's solder, resin is the best and cheapest flux. It possesses this important advantage over chloride of zinc, that it does not induce subsequent corrosion of the article to which it is applied. When chlorides have been applied to anything that is liable to rust, it is necessary to see that they are thoroughly washed off and the articles carefully dried.

P. P. McHUGH (late with Roby & Cole), manufacturer of **Blank Cards** and **Card Boards**, No. 51 Ann Street, New York. Card Stock by the case at special low rates. SPECIALTY.—Fine Translucent Goods for Lithographic Printing or Steel-plate Work. Warranted to stand printing in ten colors. Engravers' Super Bristol, White and Cream, the very perfection of fine finished stock. Gilt Bevel-Edge Panels for Artists' and Photographers' use, and other artistic novelties.

HOVER'S MANUSCRIPT WRITING PAPER, (Patented.)
Gives greater facility in writing and produces at once a **BLACKER MANUSCRIPT.**
For Sale by the Principal Stationers, or

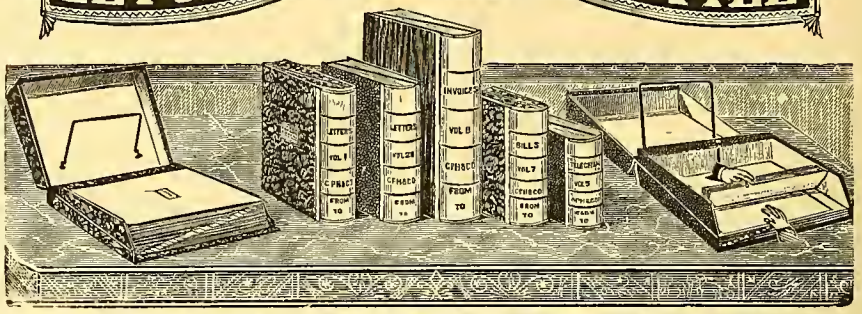
Note, Sermon, and Ledger Papers, &c.

LIPMAN'S PATENT EYELET MACHINES.

ECONOMICAL. CLEANLY AND LABOR SAVING

SELF INDEXING **BROWN'S** SELF-BINDING
PERFECT
LETTER, BILL AND INVOICE FILE
PATENTED OCT. 30 1877



Prices: Marble Paper Sides, $15.00; Cloth, $18.00; Walnut, $24.00 per doz

The following are a few of its many advantages:

1st—It will hold nearly twice the quantity of any File of equal bulk.

2d—It costs less than any File of equal capacity.

3d—It is instantaneously *self-indexing* and *self-binding*.

4th—It does not *tear* or *mutilate* the letters.

5th—Any letter or paper can be *removed* and *replaced at pleasure* and at any time, *without* tearing or mutilating, or in any manner *disturbing* the others.

6th—Its contents are not *exposed* to *dirt* and *dust*, and are kept in a cleanly, orderly manner for rapid reference.

7th—It *files*, *indexes* and *binds* in *one operation*, and in less time than is consumed for either with any other File now in the market.

8th—It is adapted to any system of filing.

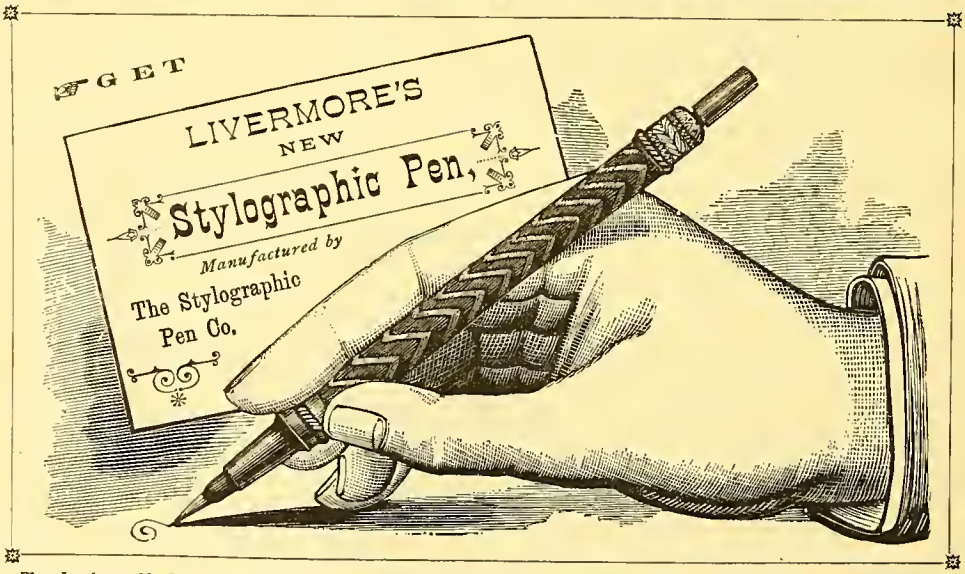
IF YOU WANT THE BEST STYLOGRAPHIC PEN,

The Latest and the Best. Circulars on application.



Examination Solicited and Satisfaction Guaranteed.

The attention of the Trade is called to the improvements made and advantages offered in Livermore's New Stylographic Pen.

Patented July 15, 1879, and March 9, 1880.

FIRST—**A Smaller Air Tube**, allowing more space for the ink, and rendering the operation of filling easier and less frequent.

SECOND—**The Manner of Fastening the Needle**, not to the air tube, where it would be in danger of being bent or injured every time the pen was filled, but in the point, where it is not so exposed.

THIRD—**The Protection of the Spring** by a silver casing, preventing the ink from clogging its action.

FOURTH—**The Duplex Interchangeable Point Section**, furnishing great facility in cleaning the pen.

FIFTH—**The Ease with which Repairs can be Made.** The needle being in the point, it is not necessary to send the whole pen to the factory, but any dealer can supply a new point.

SIXTH—**Freedom from Legal Difficulties.** The New Stylographic Pen is manufactured under the patent controlling the use of an air tube in a Fountain Pen, and it is therefore free from legal complications.

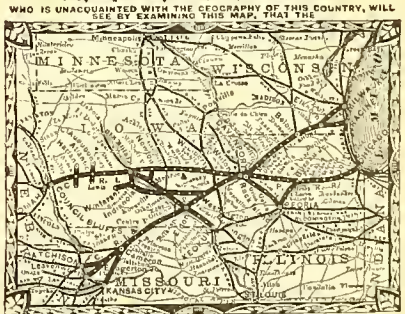
A MAN

WHO IS UNACQUAINTED WITH THE GEOGRAPHY OF THIS COUNTRY, WILL SEE BY EXAMINING THIS MAP, THAT THE



CHICAGO, ROCK ISLAND & PACIFIC R. R.

IS THE GREAT CONNECTING LINK BETWEEN THE EAST & THE WEST!

Its main line runs from Chicago to Council Bluffs, passing through Joliet, Ottawa, La Salle, Hennepin, Mollne, Rock Island, Davenport, West Liberty, Iowa City, Marengo, Brooklyn, Grinnell, Des Moines (the capital of Iowa), Stuart, Atlantic, and Avoca; with branches from Bureau Junction to Peoria, Western Junction to Muscatine, Washington, Fairfield, Eldon, Belknap, Centerville, Princeton, Trenton, Gallatin, Cameron, Lostonsworth, Atchison, and Kansas City; Washington to Keokuk; Iowa Junction to Muscatine; Kewanee to Farmington, Delmont, Bushnell, Prairie City, Roseville, Macomb, and Rushville; Galva to Atkinson, Cambridge, Orion, Colona, Rock Island, and Davenport; Morrison to Fulton, Morrison, and Lyndon; Manchester to Maquon; Andalusia to Rock Island; Avoca to Harlan. This is positively the only line running which operates a through car from Chicago into the State of Kansas.

Two-and-Three-Days' Service, with Pullman Palace Cars attached, are run each way daily between CHICAGO and PEORIA, KANSAS CITY, COUNCIL BLUFFS, LEAVENWORTH and ATCHISON. Through Sleeping Cars between Milwaukee and Kansas City, via the "Milwaukee and Rock Island Short Line."

The "Great Rock Island" is magnificently equipped. Its road bed is simply perfect, and the track is laid with steel rails.

What will please you most will be the pleasure of enjoying your meals, while passing over the beautiful prairies of Illinois and Iowa, in one of our magnificent Dining Cars that accompany all Through Express Trains. You get an entire meal as good as is served in any first-class hotel, for seventy-five cents.

Appreciating the fact that a majority of the people prefer separate apartments for different purposes (and the numerous passenger business of this line warranting it), we are pleased to announce that this company runs Pullman Palace Sleeping Cars for storage purposes, and Palace

PULLMAN PALACE CARS are run through to COUNCIL BLUFFS, KANSAS CITY, ATCHISON, and LEAVENWORTH.

Tickets via this Line, known as the "Great Rock Island Route," are sold by all Ticket Agents in the United States and Canada.

N. Y. SILICATE BOOK SLATE COMPANY,

No. 191 Fulton Street.

This Blackboard and Easel is accompanied with a set of nine new pictures, printed upon stiff cards to be placed in a groove at the top of the board for Drawing. It is reversible for marking on both sides; is very portable and easily carried about the house. Size 18x24 inches, height 46 inches, which allows the child to sit or stand while drawing.

No family should be without one. Price of all with chamois, rubber and five dustless crayons, **$3.00.**

Sent by Express to Dealers, one dozen in crate, or singly to Families.

STAINING WOOD.

Staining wood may be divided into two classes—the staining or dyeing proper, and a sort of painting in which the coloring matter, in a liquid state, partially penetrates the pores of the wood and is held by them. Dyeing colors the fibres, to a greater or less depth, in the same manner as the fibres of fabrics are colored by the deposition of a coating of coloring matter in and upon them, and occasionally by actually changing the colors of the fibres themselves. Staining, properly speaking, is an exceedingly unsatisfactory method of coloring wood. The pigment usually penetrates but a very little way into the wood. The slightest scratch or abrasion of the surface shows the natural color. When this happens, as it almost invariably does after a short time, repair is practically out of the question. In dyeing, the coloring matter can usually be made to stain the fibres for some little distance into the body of the wood, and thus a much more durable color is effected. In the case of veneers, a piece of wood not over an eighth of an inch thick, it is possible, by careful manipulation, to produce a tolerably even color throughout the wood. In general, wood can be made almost any desired tint, from red rose, color, through the blues, to black. Most of the bright colors, however, are liable to fade, and their use is not to be recommended.

At the present time, naturally, woods are in great demand, and it is often convenient to imitate the color of some precious wood upon one less costly. Thus we may, upon cherry or maple, imitate rosewood or ebony. Ebony, in fact, can be imitated upon a great variety of woods; the methods of producing the color, however, must be varied for the different kinds. The books are filled with instructions for producing black walnut stains and dyeing woods to imitate black walnut. A more useless or senseless practice could hardly be imagined, for black walnut is really the last wood in the world which one would wish to imitate. Its color is bad, and its only recommendation is that it is easily worked and is considerably harder than pine.

At the present time mahogany is somewhat difficult to get, and it is fashionable to use substitues for it, which are mahoganized. Cherry is one of the most commonly used woods for this purpose. If properly treated, cherry is one of the finest cabinet woods which we have, and it seems almost a pity to use it for imitating anything else, even though it be mahogany. A great number of recipes are given in the books for mahoganizing, but the workman in using them is usually in the dark, because no explanations of the reasons for the directions are given. One of the English recipes says, after getting the surface of the wood smooth, rub with a solution of nitric acid, and then apply a solution of dragon's blood. The solution is made by dissolving one ounce in a pint of alcohol and adding one-third of an ounce of carbonate of soda or common washing soda. Sulphuric acid will answer just as well. Its office is to darken the wood and prepare it for receiving the dye, which is the dragon's blood. Our own experiments lead us to believe that the only advantage of the washing soda is to neutralize any of the acid which may remain behind. Another recipe calls for the acid treatment of the wood first, which is then followed by a liquid made with two ounces of logwood, eight ounces of madder, one ounce of fustic and one gallon of water. This is boiled two hours and then applied to the wood. Unfortunately, there are no recipes, so far as we know, which give di-

rections for using logwood, dragon's blood, &c., in the shape in which they are found in the stores. For example, instead of logwood in chips, it is much more convenient to buy a little four-ounce box of the extract of logwood, and instead of the madder coming in the old form, it can now be obtained in the form of a solid, which is all ready to be dissolved in boiling water. By dissolving separately the logwood, dragon's blood and madder in water, and then, after getting them of good strength, mixing a little of each and drying on a waste piece of wood, the proper proportions necessary to get just the color desired are easily found. It must be borne in mind that the logwood gives a purplish tone to the mixture, and that the others, if kept to themselves, will only produce a yellow. The stain, when put upon cherry without an acid being previously applied, will give a sort of dirty yellowish brown. If the acid is added afterward, the red will speedily make its appearance. Besides producing the red color, the acid has another effect, which is valuable in imitating old and dark mahogany—it darkens the wood very materially. The greatest amount of darkening can be obtained by brushing the wood with the weak acid and then warming it. The heat intensifies the action of the acid; but if too long continued it is possible to scorch the surface, making it look as though a hot iron had passed over it. Indeed, acid may be used for staining almost any wood a dark brown. It would be possible, by a combination of yellow and red stains, to produce the color of mahogany on almost any of our common woods. In Dick's Encyclopedia we find the following directions for producing a dark mahogany color: "Boil half a pound of madder and two ounces of logwood in a gallon of water; apply with a brush while the liquid is hot; when dry, go over the whole with a solution of pearlash made of two drachms of pearlash to a quart of water." We have some doubts as to the action of this solution on cherry, though it might act well enough on other woods. Permanganate of potash is often mentioned as being a good material for imitating certain kinds of wood. It comes in the form of crystals, which are readily dissolved in water. When put upon the wood it penetrates deeply and produces a pink color at first; but this, by the decomposition of the permanganate of potash itself, soon changes to a dark brown. This is a durable color, consisting of a metal oxide distributed wherever the liquid has penetrated.

Many woods get their best color by age. Among these are mahogany, oak and cherry. Usually, by imitating the chemical action to which they are subject with time, we may produce the same results quickly. If we wash oak with lime water, or, better yet, aqua ammonia, we darken its color as though with age. Lime water also darkens mahogany, and greatly improves the colors of some kinds. It also has an effect on cherry. Maple is a very easily stained wood, but it appears to have been somewhat neglected by those who wish to imitate the more valuable woods. The only colors which we remember to have seen upon maple are a dark blue-gray, produced by an iron solution and a yellowish tint due to the varnish.—*Carpentry and Building.*

Cementing steel for thirty days, instead of the usual nine to twelve, gives a material excellently adapted for special cutting purposes, and this long process should be resorted to whenever an exceptionally choice and reliable steel is needed.

The MacKinnon Pen or Fluid Pencil.

FULL LENGTH, POCKET SIZE.

FULL LENGTH, DESK SIZE.

Patented March 21, 1876; January 21, 1879; Reissued July 15, 1879. Patented July 29, 1879.

THE COMMERCIAL PEN FOR THE AGE.

The Only Successful Reservoir Pen in the Market.

THE ONLY PEN ever made with a CIRCLE OF IRIDIUM (DIAMOND) around the Point.

THE ONLY PEN accompanied by a WRITTEN GUARANTEE from the Manufacturers.

THE ONLY RESERVOIR PEN supplied with a GRAVITATING VALVE. Others substitute a SPRING, which soon gets out of order.

THE ONLY PEN that will stand the Test of Time.

The above are FACTS which it behooves every man in the trade to know. Enough said.

The "SOVEREIGN" MacKinnon Pen.

READY FOR USE.

CLOSED FOR THE POCKET.

The above cuts represent our "SOVEREIGN" Pen, which differs from the other styles only in the construction of the case. Its advantages are:

GREATER STRENGTH!

GREATER CONVENIENCE FOR THE POCKET!

GREATER INK CAPACITY!

Its full length, when closed, is but 4 inches, while it can be lengthened to 5½ inches for use. THE MOST POPULAR PEN MADE. We make these in plain rubber—price $4.50; and covered completely with 18k. gold—price $7. The latter makes a very handsome gift Pen.

MACKINNON PEN CO., Patentees and Manufacturers, 200 Broadway. N. Y.

The Cement of the Ancients.

BYRON WESTON

DALTON, MASS.,

HAS BEEN AWARDED THE

GRAND PRIZE GOLD MEDAL

AND RECOMMENDED THE

Medal of Honor and Perfection

At PARIS, 1878,

This being the **HIGHEST and ONLY AWARD** given for

LINEN RECORD AND LEDGER PAPER.

—A SPECIALTY.—

THIS Paper has received THE HIGHEST PREMIUM over all others from *the Cincinnati Industrial Exhibition*, *Massachusetts Charitable Mechanics' Association*, *Franklin Institute* of Philadelphia, Louisville Exposition, Medal and diploma from *United States Centennial Commission*, *Medal of Progress American Institute*, *1877*, *and Medal of Improvement and Progress*, *Boston*, *1878*. Its

PRINCIPAL ADVANTAGES

are as follows:—1. It contains more LINEN than any other Ledger Paper, has a longer fibre, and is, consequently, tougher. 2. Having a harder and better body, it frays less in erasure, so that by simply using the rubber after the eraser, the ink is prevented from spreading. 3. It is more uniform in Weight Color and Finish. 4. It never cockles if properly bound. 5. Its chemical action upon ink is such that it both writes and rules up better. For proof of the foregoing, refer to a large number of Stationers, Bookbinders, Bookkeepers, and Recorders, who have given it, after a severe test, the preference over all others. This paper is *Double Sized*, and will stand any climate or the most acid of fluid inks.

☞ **Send for sample sheet, ERASE and REWRITE FOUR TIMES on same spot. Each sheet is water-marked with name and date.**

The American Stationer

A Journal Devoted to the Interests of the Stationery & Fancy Goods Trades

REDMAN & KENNY, N.Y.

"The Stationer"—Every Thursday—$2.00 Per Annum.

VOL. IX.---NO. 8. NEW YORK, FEBRUARY 24, 1881. WHOLE NO. 296.

Correspondence.

BOSTON NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

BOSTON, Mass., February 21, 1881.

Trade among the stationers has been good the past week, and there are indications of an unusually large volume of spring trade. Interior dealers report short supplies in some lines of goods, and that the recent unfavorable weather has prevented a stocking up.

The partial destruction of Rockwell & Rollins' city, book and job printing office, Arch street, has brought disaster upon one of our youngest and most enterprising firms. This house has always produced premium work in the way of fancy and artistic stationery. The firm expects to be at rights in a few weeks, but some of its losses are irreparable.

Quite a number of New York dealers, by their agents, have been in town and introduced new novelties in stationery adapted to the coming season's trade. Live Boston dealers are ever ready to invest in anything new that will sell quickly—and they always know a good thing when they see it.

There have been an unusually large number of failures within the past three weeks, but none as yet among the stationers. On the contrary, the trade was never in a stronger position than at present. Probably the stationery trade is the most conservative of any department of business in the city. Loring, whose name is as familiar as a household word, stationer as well as publisher and dealer in fancy goods and periodicals, corner Broomfield and Washington streets, so many years, has opened a new establishment in the vicinity of the Boston Theatre, which is further uptown a few blocks. This old corner is a valuable one; and although a small store, secures a rental of $11,000 annually.

Forbes & Co., lithograph manufacturing company, announces a large and unique line of fancy advertising cards, wholesale only. "No samples for collectors." Cards to order a specialty. Bufford's Sons are also ready to furnish everybody with advertising cards of all kinds artistic. I am told that the demand for such cards in the West is unparalleled this season.

A few weeks ago I wrote you something about "card collections." The craze is now worse than ever. The last issue of the Sunday *Herald* gave the advertisement of seventy-two "card collections," representing as many persons in the business. These cards represent about everything on the earth, in the earth and around the earth; and some of the advertisers say, solemnly, that "customers may depend upon not being swindled"

Although the temptation is strong for men engaged in all kinds of business to step into the "whirlpool of speculation," our stationers, all of them, seem to stick to legitimate business. Speaking of speculation, there is a young man in this city, twenty-two years of age, who has made $200,000 since the "boom" commenced. He began business with less than $5,000. Here is another specimen of luck. A young man, noted for his extraordinary business capacity, has identified himself with a leading banking house, with an assured salary of $75,000 a year.

A prominent paper dealer and stationer has recently identified himself substantially with a new telegraph company, organized under the laws of Massachusetts.

The upper part of Milk street will soon be known to the trade as "Stationers' Row."

The sales of the Livermore stylographic pen, since the trouble with a competitor in the stylographic business has been practically settled in favor of the former, are larger than ever before, and the pen appears to give perfect satisfaction, as evidenced by the voluntary testimonials of hundreds of stationers in and out of New England. I called upon Louis E. Dunlap, manufacturers' agent, 290 Washington street, for information on the subject, and he assured me that he was very busy in responding to orders for the Livermore pen. Boston stationers now sell no other pen to any extent, they being thoroughly satisfied with the Livermore article. Its nonliability to get out of order and the certain manner in which it does it work are among its recommendations.

THE STATIONER is a greater favorite than ever among the trade here, which now instinctively look to it for the earliest announcements of novelties, the drift of trade, timely suggestions, &c. In fact, the paper has become an authority in its special line.

Dealers are expecting a pretty lively trade next month and stocks are ample for the season.

L.

BALTIMORE NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

BALTIMORE, Md., February 22, 1881.

Business is looking up. The jobbers have their travelers on the road, and they are sending in good orders and cheering reports. Retail business, too, is much better than this time last year. I visited Washington, D. C., during the past week, and found trade in a most healthy condition. The stationery and book men are putting in fine stocks of goods in anticipation of increased sales on the 4th of the coming month, when so many strangers will be in the capital. James Bellew, of that city, is talking of taking one of the new warehouses recently erected in his block. Brad. Adams (also of Washington), who is so well known and liked by all traveling men, says that business with him during the past month has been good, and that, like everybody else, he expects still better things by Inauguration Day. The remainder of the trade, viz., Robert Beall, James Shillington, Mohen Brothers and W. H. & O. H. Morrison, all seem to be doing well.

But to return to Baltimore. Daniel Miller & Co., dry goods and notion men, have gotten into their new warehouse, which is one of the handsomest in the city. This house has a large stationery department, in which it carries an extensive line of staple goods.

John B. Piet has just received from the Baltimore and Ohio Railroad Company an order to make up a large lot of copy books.

R. S. Hill, supply clerk in the purchasing agency office of the B and O. Railroad, died last Sunday of a complication of diseases. He was between twenty-eight and twenty-nine years of age, had been in the employ of the company since 1877, and attended chiefly to the purchase of stationery supplies. His place is temporarily filled by M. C. Sullivan, from the chief office of the company, at Camden Station.

The firm of Dennis & Robb, paper hangers, has been dissolved, and B. M. Dennis has given notice that he will continue the business at the old stand, 23 N. Charles street

The press banquet here was a grand affair, and the speech made by President R. B. Hayes on the occasion was much admired. Mr. Routledge, a son of George Routledge, the London publisher, was invited, but he had already made another engagement for the day of the feast. The *carte*, gotten up by Guggenheimer & Weil, was a magnificent affair, and President Hayes and others spoke of it in most complimentary terms. The first page of the *menu* bore a phototype representing the various daily and weekly papers of the city.

Mr. Weil, of the firm of Guggenheimer & Weil, has just recovered from a severe attack of pneumonia. He is very popular in the city, and his illness caused much concern among his many friends.

A letter, received in this city this morning, states that J. M. Hennessy, of the firm of Burns & Oates, publishers, London, started for America on the 19th instant.

Among the representatives of the trade in the city during the past few days were Joseph S. Gally, of Rumpp & Co., Philadelphia; Charles

Small, of D. & P. Lawrence, New York; F. C. Welsh, of John E. Potter & Co.; W. E. Farrell, president of the Nescochague Manufacturing Company, and E. A. Bush, of the Continental Manufacturing Company, all of Philadelphia. J. Viennot, general manager of the Philadelphia branch of the Lockwood Press, has also been here for a few days. He is en route for Pittsburg, and goes hence with the regrets of his many friends in Baltimore. W. P. M.

IOWA NOTES.

[CORRESPONDENCE OF THE STATIONER.]

KEOKUK, Iowa., February 18, 1881.

Knowing you would like to hear from the trade in different sections of the country, I will give you a few lines concerning the trade in our little city of 15,000 inhabitants.

We have three regular book and stationery houses, besides eight or ten small shops, such as news depots, confectioneries and corner groceries and small druggist shops, which carry a stock of school books, stationery and such other stationers' goods as pay a profit. Besides these our retail dry goods houses carry quite an assortment of stationers' goods, and of course sell them as leaders, which hurts the legitimate trade very much. Papeteries are articles the book trade have about abandoned, or they have abandoned the trade, as the dry goods dealers sell them at a much lower profit than the stationers care to, or can afford to do. They sell them at about 5 per cent. profit, in fact, they make leaders of all stationers' goods.

Trade here is fair, although competition is quite strong. The holiday trade was better than ever known here before; all of the dealers were heavily stocked, but found no trouble in disposing of their goods, and could have sold much more had they bought heavier. Christmas cards had an immense sale, and stocks were all sold three days before Christmas. All of the Christmas cards, both the foreign and domestic, were very pretty.

The trade in valentiues has just closed, and our dealers have not fully recovered from the effects incident to this class of trade. The sale of the beautiful missives this season was very gaeat, and it seems to me that this trade is increasing instead of decreasing. This year the old folks as well as the young were afflicted with the mania of purchasing valentines. Whitney's and Prang's both found a ready sale. The latter were something new this year, and very pretty, especially the ones with fringe. Prang's fine one ($2), I am told, was the first to go with one stationer. People bought valentines this season who are not in the habit of buying them, simply because they were pretty.

As this is considered a quiet month the trade fully realize it. It is very dull, and is made more so by the continued snow storms of the past two weeks, which have completely choked the wheels of traffic in this, the Gate City of Iowa.

WESTERN.

PHOTOGRAPHING THE CHROMOSPHERE.—Janssen has been induced, by his late novel experiments, to undertake photographs of the chromosphere. He allows the solar luminous action to continue so long that the solar image becomes positive to the very circumference, without going beyond it. The chromosphere is then shown in the form of a dark ring, with the thickness of 8″ or 10″. He has compared positive and negative solar photographs, which were obtained on the same day and with the same instrument; the measurement of the diameters shows that the dark ring in question is wholly outside of the solar disk.—*Comptes Rendus.*

CHINESE POTTERY AND PORCELAIN.

The discovery of the secrets of the manufacture of art pottery in China is claimed so long ago as B. C. 2698—2599, during the reign of the Emperor Hoang-ti, and whether this date be speculative or accurate, the discovery is doubtless of great antiquity. It is very probable that, like other nations, the Chinese learned the arts gradually, and that improvements upon improvements had resulted in some degree of perfection, while the world was young; and this wouderful people, so prepared for a development of art by their high state of civilization, took the more readily to ceramics from the scarcity of marbles with which to decorate the architecture.

Chinese pottery differs from any other in the density of its paste, and for this reason has not infrequently been compounded with porcelain, the special characteristic of which translucency, however, is absent. Some of the earlier productions are of a dull brownish-red color. An ornament peculiar to the Chinese potters, and adopted at an early date, was the crackle; this is generally found of a brownish-gray, and relieved by raised ornaments of a dark ferruginous color, much resembling bronze; handles of this kind consist of kylins' heads, with movable rings placed inside the teeth; circular ornaments are also found, some three or four upon a vase, at irregular intervals, about the size of a silver quarter, with seal-like impressions, and bands of the same bronze-like paste round the lips and bodies of the vases. The crackle appearance is produced by a very simple method; the body or pâte being made more sensitive to heat and expansion than the coating, or glaze, only a little manipulation is required to cause the cracks all over the surface to be more or less frequent, and so form crackle of a larger or smaller pattern; black, and sometimes red, were then rubbed into these tiny cracks to give this curious decoration a more marked form.

There is much variety in the colored glazes which are thus crackled. Some colors, such as turquoise blue and apple green, seem nearly always to assume a crackled appearance; others, such as reds, are rarely affected. The color chiefly selected is a grayish white; the forms are archaic, and with ornaments in dark brown, occasionally gilt. The crackled appearance, though not always artificial, owes doubtless its origin, in the first instance, to accident, and at an early period. Some of the vases of the Sung dynasty (A.D. 960—1270) are noticed as being crackled. The productions of the two brothers Chang, who lived under that dynasty, were distinguished by one being crackled and the other not. Crackled vases were called Tui-Khi yas, under the southern Sung dynasty (1127—1279). The way in which the size of the crackle is regulated seems to be indicated in one of the receipts for making crackled vases, given in the history of King-te-chin from which we learn that the material of the glaze was to be finely or coarsely worked, according to the size of the crackle required.

The oldest known specimens of Chinese porcelain are white. A piece of this kind of pure white, without gold or color, is extremely rare, and is seldom seen unless in a cabinet. White ware is still made in China. Specimens of the older periods are distinguished from modern by the fineness of paste and beauty of glaze. There are two shades of white, one tending to a creamy, the other toward a bluish white.

Next to the old white, in point of rarity, are old specimens of the bluish or sea green tint, termed by the French "céladon." In the Avery collection of porcelains in the Metropolitan Museum of Art are pieces of "céladon fleuré," "crackle céladon," and "starch blue." The student of ceramics cannot fail to derive much benefit from carefully comparing the varied examples of this useful collection, which is arranged in the north gallery of the large hall in wall cases, and in upright and table cases in the front of the gallery near the west end.

Yellow glazed porcelain is much valued by collectors, owing to the supposed scarcity of specimens of this color, it being the imperial color of the later dynasties. What is known as imperial yellow is extremely rare, its use being confined to the royal household. Other shades of yellow are less rare, but are much prized, particularly the mustard yellow.

The red glaze is of considerable antiquity, some of the vases made under the Sung dynasty, at Tsing-cheon, are mentioned as resembling chiseled red jade. One tint, the "sang de bœuf" of French collectors, is much valued in China. Sometimes portions of red glazed vases appear purple, owing probably to a different chemical condition of the coloring matter in those parts. This variety is called by the Japanese "shinsha." "Splash" vases are also met in other colors.

This style of ornamentation shows considerable knowledge of chemistry. It has been supposed that these agate like specimens were the result of mistakes or misfires; but there is now no doubt that the Chinese set a very high value on the potter's art, and endeavored to make specimens in imitation of many beautiful agates. It was well known that metallic oxides were susceptible of influence by oxygen; and by bold manipulation in the furnace, with a strong current of air, the oxygen would combine with the metal in fusion, the introduction of thick smoke would absorb the oxygen, and causing the destruction of the oxide, give the color of the pure metal. To such an extent was this science of decoration perfected, that it was possible to imitate a ripe fruit somewhat resembling our peach, with its many varied and beautiful tints, entirely by this process and without the aid of the pencil.

Blue glazes must have come into use in very early times, as blue is stated to have been the color of the vases of the Tsin dynasty (A. D. 265—419). The tints appear to have varied greatly, one of the most celebrated being the blue of the sky after rain, which was the tint selected for the use of the palace by the Emperor Chitsung (954—959). Specimens with a deep blue glaze are known in Japan as "Ruri." The purple glaze is another beautiful variety. Specimens of this color are mentioned as early as the Sung dynasty (960—1279). The brown and coffee-colored glazes do not appear to be very ancient. Père d'Entrecolles, writing in 1712, mentions them as recent inventions.

A brilliant black glaze is by no means common, excepting where it is used in combination with gilding. It is said to date from the reign of the Emperor Keenlung (1736—1795). It differs from the black ground of the painted wares, which are of a dull black, glazed over with green.

The "liver-red" is very old and rare. The glaze was a secret of the famous Lang family of potters, who became extinct in the year 1610. Their pottery fetches great prices at Pekin. The Chinese have never been able to successfully imitate the ware.

For decorative purposes pieces in solid color are sometimes remarkably effective. Besides the colors we have named, there are turquoise, robin's egg, and apple-green.—*Pottery Gazette.*

Some people are such inveterate borrowers that they will borrow trouble rather than not have any loan on hand.

OLD BERKSHIRE MILLS

DALTON, MASS., U. S. A.

One party writes: 'The two hundred RECORD BOOKS, for 83 of the 99 Counties, now on exhibition at the Iowa State Fair, at Des Moines; and all, but four (!) of them, made from your 'OLD BERKSHIRE MILLS LINEN LEDGER,' Medium, 40lb., make a splendid show."

[The above cut is a fac-simile of the wrapper used on the Linen Ledger Paper.]

We will pay for any book rejected on account of fault in the paper. Send for Samples, test them in comparison, and see that your books are made from paper thus water-marked.

OLD BERKSHIRE MILLS

LINEN LEDGER PAPER

Will stand the severest test of COLOR, CLIMATE, INK OR WEAR.

Being **Triple Sized** (a process entirely our own) and **Loft Dried**, can be erased and written upon the fifth time distinctly. None genuine without the water-mark and date, thus—**Old Berkshire Mills Linen Ledger, 1880.**

CARSON & BROWN CO., Manufacturers.

CANAJOHARIE, N. Y. **JUVET & CO.,** CANAJOHARIE, N. Y.

—MANUFACTURERS OF—

Time Globes, Relative Time Globes, Tellurians, Celestial,

AND VARIOUS FORMS OF TERRESTRIAL GLOBES.

The **Time Globe**—see illustration—is not only a perfect geographical globe, but is also a time piece, each part working independent of the other and perfect in both. By means of internal mechanism the Globe is made to revolve once in twenty-four hours—as does the earth. **Universal Time** is obtained **without computation.** It is a **Stem Winder, regulates** from the **outside,** and runs four days without rewinding. Sizes, 6, 12, 18 and 30 inches. Prices $75 to $600, according to size and style of mounting.

The **Relative Time Globe,** while capable of performing **all** the problems of the ordinary **Globe,** gives in addition **Universal Time without computation.** Sizes, 6, 12, 18 and 30 inches, Prices, $35 to $300, according to size and style of mounting.

Tellurians, Celestial and **Terrestrial Globes,** so mounted (new designs) that no part of the map is hidden from view. Sizes, 6, 12, 18 and 30 inches. Prices, $3 to $250.

Above described Globes are **all** made of a new material, which, unlike the old plaster and clay Globes, will not fracture; in fact the shell is so strong and well made that it will be economy to recover in case of geographical changes or injury to the map.

All full Meridian Ring Globes are mounted with swiveled clutch, which allows them to be placed at any desired angle. None but the latest and most perfect maps used.

Meridian Rings are of **Brass,** and **carefully** graduated.

ALL ORDERS WILL RECEIVE PROMPT AND CAREFUL ATTENTION.

L. PRANG & CO.'S Easter Cards for 1881.

We take pleasure in herewith presenting to the trade our Price List of Easter Cards for this Season:

ASSORTMENT.—Our Easter Cards are made up in sets of one dozen, except Nos. 11 to 19, and are put up in a box or envelope. Each set contains all the designs of the series; and as no series has more than six designs, each design is more or less repeated in the set.

ENVELOPES.—Fine Cream-Tinted Envelopes are furnished with every series, without extra charge.

EASTER CARDS, WITH SILK FRINGES.—We would call especial attention to these, as they will doubtless prove very attractive. These goods are made up with the best quality heavy silk fringe, made expressly for us. All fringed Easter Cards are furnished with Protectors and Envelopes, and are put up with assorted colors of fringes.

LIST OF PRANG'S EASTER CARDS FOR 1881.

FOLEY'S

Celebrated Gold Pens and Pencils

THE FINEST AND BEST.

CIRCULAR.—To those engaged in mercantile pursuits, any invention that will facilitate their labor is highly worthy of notice, as well as of extensive patronage. One of the most important inventions of the present age is that of a pen that possesses the necessary qualities of firmness in mark and durability in use. Pre-eminently such are those of JOHN FOLEY, Manufacturer of Fine Gold Pens and Pencils, No. 2 Astor House. Their superior value is tested by the long time he has been engaged in our city in their manufacture. We, the subscribers, who know the value of FOLEY'S PENS from constant use of them for a number of years, cheerfully recommend them to those who wish for the best and most perfect Gold Pen ever made.

IF YOU WANT THE BEST STYLOGRAPHIC PEN,

The Latest and the Best

Circulars on application.

Examination Solicited and Satisfaction Guaranteed.

The attention of the Trade is called to the improvements made and advantages offered in Livermore's New Stylographic Pen.

Patented July 15, 1879, and March 9, 1880.

FIRST—**A Smaller Air Tube**, allowing more space for the ink, and rendering the operation of filling easier and less frequent.

SECOND—**The Manner of Fastening the Needle**, not to the air tube, where it would be in danger of being bent or injured every time the pen was filled, but in the point, where it is not so exposed.

THIRD—**The Protection of the Spring** by a silver casing, preventing the ink from clogging its action.

FOURTH—**The Duplex Interchangeable Point Section**, furnishing great facility in cleaning the pen.

FIFTH—**The Ease with which Repairs can be Made.** The needle being in the point, it is not necessary to send the whole pen to the factory, but any dealer can supply a new point.

SIXTH—**Freedom from Legal Difficulties.** The New Stylographic Pen is manufactured under the patent controlling the use of an air tube in a Fountain Pen, and it is therefore free from legal complications.

Trade Gossip.

All new goods and designs which are not, strictly speaking, "Novelties" will be noticed under this head. The trade are requested to forward descriptions with samples in order to secure proper notice.

The rush for Easter cards is immense.

S. P. Clayton, dealer in notions, Freeport, Ill., has failed.

D. Grand, stationer, &c., Arkansas City, Kan., has sold out.

Ward Brothers, stationers, &c., Corpus Christi, Texas, have sold out.

Francis & Spaulding, publishers, Napa, Cal., have dissolved partnership.

N. B. Dresser, printer, Tilsonburg, Ont., Can., has sold out to McGuire & Co.

F. Korbel & Brother, publishers of the *Wasp*, San Francisco, Cal., have sold out.

McCarty & Hasberg ask the trade to look at their advertisement in another column.

J. D. McCaleb, stationer, &c., Mount Pleasant, Penn., has sold out to John Cunningham.

Owen Baxter & Son, paper stock dealers, Utica, N. Y., have sold out to Preston & Everett.

W. S. Sands, dealer in stationery, &c., Toronto, Ont., Can., is advertising his business for sale.

William A. Falkner, dealer in notions, Academy Corners, Pa., has been closed out by the sheriff.

H. Sierring & Co., dealers in fancy goods, San Francisco, Cal., have filed a petition in insolvency.

H. J. Werdebaugh, wholesale dealer in notions, Baltimore, Md., has sold out to Annan & Diffenderffer.

Levy Brothers, dealers in fancy goods, New Orleans, La., are offering to compromise at 33 cents on the dollar.

Ferber & Bishop, fancy goods dealers, Crawfordsville, Ind., have dissolved partnership. Louis Bishop continues.

Chas. Kaufmann has been admitted as partner to the firm of Kaufmann & Strauss, dealers in fancy papers, &c., New York city.

Myers Brothers have had an exceedingly good valentine trade, and from present appearances the indications are that an unusually large Easter card trade will be transacted by this house.

R. J. Lester, representing J. H. Bufford's Sons, is now canvassing the Western States, and is securing a large number of orders. He carries a full line of samples of all the firm's goods.

William George, 26 Park street, Bristol, England, has issued his "library supply list" No. 89, or catalogue of a new collection of Americana, which gives a list of many scarce books, pamphlets, &c., relating to the Western continent.

Geo. McDowell & Co., Philadelphia, have issued a combined descriptive list, price list and sample card of the Clothier pens, for which they are sole agents. These pens are adapted to all requirements and sample card will be mailed for 15 cents.

H. Siering & Co., San Francisco, fancy goods dealers, the leading house in that line there, have filed a petition in insolvency. The liabilities amount to $62,277, and assets $22,130. The firm have suffered greatly by depreciation, and their losses since March, 1880, they claim, have amounted to $101,706.

A suit, in which McDowell & Son, of Lambertville, N. J., were plaintiffs, and the Acme Letter File Manufacturing Company was defendant, was tried this week in the Superior Court, this city, before Judge Truax and a jury, resulting in a verdict for the plaintiffs. The action was brought upon a claim for goods purchased and delivered, amounting to about $900. It was alleged that W. T. Gray, who is a member of the company, and who bought the goods, had misrepresented the standing of his house, and the judgment above noted will be enforced by an execution against Mr. Gray's body, an order of arrest having been granted at the outset of the proceedings.

De La Rue & Co., London, make this year a great display of birthday cards. They are in fifty-eight designs, divided into series as follows, viz., embroidery, embossed frame, mounted, plain line mounted and unmounted. The embroidery series is chromo-lithographed on the finest white satin, and its designs are "Cupid's Gambols," "Sportive Maidens," "Home Delights," "The Hope of the House" and "Water Nymphs." Each includes three varieties. The other series are also all artistically and elaborately executed and evince the greatest taste.

Henry Levy & Son's representatives are now all on the road and have with them samples of the latest designs in European novelties. These samples are said to represent goods which will agreeably surprise the trade throughout the country, and the firm asks all who want to secure particularly fine and novel goods to withhold their orders until they see samples.

A funny little ornament called the cri cri, which imitates the wooden toy of the Parisian gamin, is the latest novelty in jewelry. It is of pure gold and so made as to produce the peculiar sound of the wooden model, an imitation itself of the cricket. Some of these little ornaments are jeweled. They are the popular favorites for the moment in Paris.

Erastus Darrow, Rochester, N. Y., has just published a Directory of Seneca County, N. Y., octavo, 260 pages, boards, $3; also, the "Semi-Centennial Anniversary Genesee Wesleyan Seminary, Lima, N. Y.," illustrated, octavo, 112 pages, in muslin.

The *Times* Publishing Company and the *Blade* Printing and Paper Company, Toledo, Ohio, suffered loss by the flood on the 15th inst., as near as can be approximated, as follows: The former $3,000, and the latter $350.

The interest of O. R. Davis, deceased, of the firm of Taggarts & Davis, paper manufacturers, Watertowa, N. Y., has been transferred to W. W. & B. B. Taggarts. The style is now Taggarts Brothers.

Frederick S. Merrick, stationer, &c., New Brighton, Penn., has sold out to Duncan & Merrick, dealers in notions, recently removed from Pittsburg to New Brighton.

The new mill of Louis Snider's Sons, paper manufacturers, Hamilton, O., has been burned. Loss, $25,000; insured.

J. H. Eakin, of the firm of J. H. Eakin & Co., publishers of the *Democrat*, Marshall, Mo., is dead.

The stock of Charles Lengel, publisher of the *Herald*, Kansas City, Mo., has been attached.

Woodruff & Van Epps, dealers in stationery, Olympia, W. T., have dissolved partnership.

Thompson Brothers, booksellers and stationers, Port Perry, Ont., Can., are closing out.

F. Loetgert, dealer in fancy goods, Grand Rapids, Mich., has sold out.

Charles J. Cohen, Philadelphia, reports a good demand for the "Satinette" copying paper. The special advantage claimed for this brand is that the paper is thick and strong and will not tear when dampened. It gives three perfect impressions from one writing and is largely used in the courts where immediate copies are needed and where the usual thin papers are not desirable. This satinette paper was invented by the late Henry Cohen, and it is stated that every office or corporation once adopting its use has found it so desirable that it has never been supplanted.

A fire broke out on Sunday morning in the printing establishment of Rockwell & Churchill, city printers, at 39 Arch street, Boston, and destroyed property valued at about $28,000, consisting principally of type, presses and paper, upon which there was a partial insurance in New York and Boston offices. The building, a five-story brick structure, was damaged mainly in the upper stories, where the fire started and was confined, to the extent of about $3,000; fully insured. The firm had a combination policy of between $25,000 and $30,000 in various companies.

J. Gasquoine, representing the New York Silicate Book Slate Company and F. S. Hasbrouck & Co., has just returned from a trip West, taking in all points up to Omaha. He reports that trade has never been better and that there is a general feeling of satisfaction. F. S. Hasbrouck & Co. have something new in the way of a library tablet, which, it is thought, will be the best thing of the kind in the market.

In the "Atlanta Trade Notes and Illustrated Calendar," published by James P. Harrison & Co., Atlanta, Ga., mention is made of F. G. Hancock's paper box factory, which has become one of the manufacturing institutions of the "Gate City." Mr. Hancock, besides doing a large stationery business, handling the best lines of goods, has built up a very large trade in paper boxes of all kinds.

A new stock company for the manufacture of children's toys, games and other goods, has been organized at Lee, Mass., by W. S. Reed, C. E. Dresser and others, and styled the W. S. Reed Toy Company. The capital stock is $25,000.

The style of the firm, B. & P. Lawrence, stationers, New York, has been discontinued. Albert Asher has been admitted to the firm, which will hereafter be known as B. Lawrence & Co.

G. O. Sawyer, fancy goods dealer, Hartford, Conn., has admitted to partnership C. H. Emmons; their style is G. O. Sawyer & Co.

Benjamin N. Lamb and Frederick C. Lawnner have retired from the *Eagle* Publishing Company, Minneapolis, Minn. Frederick F. Heunig and Henry W. Krueckeberg continue.

Charles Taber, of Charles Taber & Co., New Bedford, Mass., spent a few days during the past week at his branch office in this city.

Marks Simons & Son, wholesale and retail dealers in notions, Chicago, Ill., have dissolved partnership. Marks Simons continues.

The style of E. D. Robinson, publishers of the *Eagle*, Butler, Penn., has been changed to Robinson & Carson.

Walter Barss, proprietor of the *Star*, Wolfville, Nova Scotia, has sold out to A. J. Steele.

Mrs. Hawkins, dealer in fancy goods, Watford, Ont., Can., has removed to Petrotea.

The stock of Mrs. E. L. Libbey, fancy goods dealer, Saco, Me., has been attached.

The stock of Dunbar Brothers, printers, Damariscotta, Me., has been attached.

Cutler & Co., paper-box manufacturers, Haverhill, Mass., have failed.

J. G. Thomas, bookseller and stationer, Scranton, Pa., has been burned out.

A. N. McArthur & Co., publishers, Portland, Ore., have dissolved partnership.

Henry Schwoon, paper bag manufacturer, New York, has made an assignment.

W. Ireland, stationer, &c., Owen Sound, Ont., Can., has failed, and his stock is advertised for sale.

Winger & Pennypacker, booksellers and stationers, Van Wert, O., have made an assignment.

Robert Cockroft has just started out West on his second trip this year for Charles T. Bainbridge's Sons.

Nathan Stern, dealer in notions, Baltimore, Md., has made an assignment, and offers to compromise at 25 cents on the dollar.

The American Engraving and Printing Company, Gold street, New York, has issued a new sample package of colored envelopes.

Harry P. Blackburn, representing George McDowell & Co., Philadelphia, will start to-day on his spring trip through Pennsylvania.

George L. Pease, of the well known firm of Boorum & Pease, is taking a week's relaxation from business, and is now in Washington, D. C.

J. J. Frank, of Frank & Co., San Francisco, has returned from his visit to the Eastern paper mills, and left here a day or two ago *en route* for his home.

George E. Hess, of Salem, Ohio, is now representing George McDowell & Co., of Philadelphia, on the road. He will devote his time to Ohio and Indiana.

H. N. Harbach, stationer, of Philadelphia, has made a general assignment for the benefit of his creditors to Charles E. Lex, Jr., 51 North Sixth street, in that city.

Matthews & Co. publish the "Treasurer's Pocket Record" and the "Treasurer's Receipt Card," both very convenient and useful for associations where accounts are to be kept between the treasurer and members.

The firm of Lord, Brewster & Co., advertising agents and dealers in printing material, Chicago, Ill., has been succeeded by that of Lord & Thomas, the new firm consisting of D. M. Lord, of the old firm, and A. L. Thomas, recently of Boston.

C. H. Denison's reference index is applicable to dictionaries, blank books, catalogues, ledgers, and to all books of reference, old or new. With it any letter or subject can be turned to with a single motion. It is said to be very favorably indorsed by leading professional men.

George E. Marshall, of George E. Marshall & Co., Chicago, has been in the city this week, and is about leaving here to spend a month in Cuba for the benefit of his health.

White & Pratt, 38 and 40 Reade street, have been so driven with orders for toilet paper that up to within a short time ago they found it impossible to keep up the supply. At present, with a more plentiful supply of water, in connection with steam power, which has recently been added to the Alpine Mills, at Waterford, Conn., they are prepared to meet all the demands of the trade, however large they may be. This firm is agent for the Witch Hazeline, Alpine, Brighton, Meadow Mills and Sterling brands, and makes a specialty of toilet papers, handling no other goods, and is prepared to offer buyers very close figures. Its goods are put up in very attractive shape, and full count is guaranteed.

Moore & Warren, 57 John street, who do an extensive business for the trade in perforating, paging and consecutive numbering, are enlarging their facilities, a step made necessary by the large increase of their business. A portion of the first floor has been added to their office, increasing its dimensions considerably.

THE STATIONER.

DEVOTED TO THE INTERESTS OF THE

Stationery and Fancy Goods Trades.

WEEKLY---$2.00 PER ANNUM.

Single Copies - - - - 10 Cents

NEW YORK, THURSDAY, FEBRUARY 24, 1881.

Advertisements cannot be received for insertion in the current week later than 12 M. on Wednesday. The charge for advertising is 25 cents a line, each insertion. Special terms for standing and displayed advertisements to be had on application.

This journal aims to be a medium of information for and a representative of the interests of every one connected with the stationery and fancy goods trades. It contains a full and trustworthy survey of the market for stationery in this country, in all cases giving the actual prices at which goods can be bought of importers and jobbers in this city, together with a detailed account of novelties in the trade, patents relating to stationery, and current items of interest. A review of foreign markets and accounts of movements abroad will also be furnished, and no pains will be spared to make THE STATIONER a thorough and complete exponent of the trade.

Subscription and postage for Great Britain, per annum..... 12s.

Any information our readers may wish to obtain shall be cheerfully given, and prompt replies will be made to all inquiries addressed to us on any subjects of interest to the trade.

Communications on all trade matters are earnestly solicited. Address

HOWARD LOCKWOOD, Pres. and Treas.

Subscribers to THE STATIONER can be supplied with the best cloth binder in the market. Deliverable at the publication office. Price, fifty cents.

Readers of this paper who avail themselves of the information obtained from its columns, by advertisement or otherwise, are requested to notify their correspondents of the source of their information.

REPORTS as to trade in different parts of the country are quite satisfactory. The spring campaign is opening and indications point to an active movement.

AN extraordinary activity pervades all manufacturing interests. We have heard of houses which refuse to contract to fill orders until the latter half of the year, and generally people are rushed to keep up with the demands made upon them.

WE are afraid there is a disposition to become excited over the very favorable business aspect, and that the tendency to speculation is becoming so strong as to take men off of their feet and warp their judgment. Of all lines of business, the stationery trade just now seems to be more strictly conservative than many others. One reason for thinking so is that there are so very few failures in the trade, and that, while buying has been going on to a full extent, there is not a disposition to take too many goods on chances.

GREAT outcry is being made and associations are forming against the adulterations of articles of food. In this, people are beginning to take more positive ground against frauds which are started to enrich dishonest traders at the expense and to the injury of consumers. It is not, however, the moral aspect of this fraudulent dealing which excites so much indignation, but the danger to life and health. The immorality of it is no worse than that of other tricks of trade concerning which we have had much and shall probably have more to say from time to time. While they are about it and are seeking legislation to protect the people from the dishonest practices they complain of, it would be well for those who are concerned in furthering the demand for relief to include every false dealing within the scope of their action. Our readers know full well what reforms are needed; and if any of them are concerned in these other measures for the prevention of fraud, let them bear in mind that weights and counts need looking after also.

IS it negligence, poor business capacity, or what, that prevents wholesale dealers in stationery articles from knowing when goods are carried off under their very noses? We do not want to make any harsh reflection upon the business methods of houses, or to insinuate aught against the employees when we say that it is remarkable that goods can be taken out of a store in broad daylight and no one know anything about it. There is certainly need of circumspection. Of course we all know about shoplifters; but these ought to be limited in their action, if we may concede them any privilege at all, to retail stores, where greater confusion and less system may be said to prevail than in the larger houses. The fact that a very considerable line of goods can be carried off from a jobbing house, suggests that greater attention should be paid to people who come into a store. It speaks ill for the attendants of any house, that persons can come and go without any one knowing the purport of their visit or the character of their operations. Too much indifference and want of courtesy is often shown to customers, and it would seem that in this way clerks give thieves the best opportunity possible. It is related of Aaron Burr, that he was always courteous to the extreme and that no one ever called on him—even if an office boy with a message—that he did not rise to his feet and greet his visitor kindly. There certainly was no sacrifice of manhood or dignity in such an act; but we question if many—scarce any—of those who call themselves gentlemen at the present day would stretch their complaisance so far. It would be a good thing if our young men should drop the careless, selfish and sham independent air of false gentility and greet even the poorest visitor with that attention which they would like extended to themselves. If they should, it might be found that not only would they improve in the estimation of those with whom they might have business dealings and associations, but they might also become more alive to the acts of those who take advantage of the careless and indifferent.

ANSWERS TO CORRESPONDENTS.

S. E. P. wants to know headquarters for Anderson's safety inkstands.

Ans.—J. F. Anderson, 17 Murray street, New York.

W. H. W. asks for addresses of manufacturers or dealers in table mats.

Ans.—Most of the fancy goods men handle them See our advertising columns. Charles Zinn & Co., 406 Broadway, New York, manufacture them.

F. H. D. inquires who makes leather boxes for pens (gold pens).

Ans.—Dennison Manufacturing Company, 198 Broadway, S. Kohn, 71 Nassau street, and Chas. Herdtle, 3 Duane street, all in New York.

Charles Sneider, of this city, has invented a process for casting relief plates in brass or any other metal, two patents for which were issued February 8, and a third will be granted next month. A plate just finished in brass under this process shows a complete and perfect cast of three reliefs. This process, it is claimed, is extremely important to publishers, book binders, paper hanging and stationers' hardware manufacturers, calico printers and others. Daniel Slote and Samuel L. Clemmens (Mark Twain) are interested in this enterprise, and inquiries in regard to it will be cheerfully answered upon application to Mr. Slote.

Among the visiting members of the trade in the city this week were Jacob H. Medairy, of Jacob H. Medairy & Co., Baltimore; Mr. Simpson, of Simpson & Hoge, Wheeling, W. Va., and John Doering, of Leek, Doering & Co., Cleveland, O.

W. H. Sears has returned home from a trip through the East having been successful in booking a great many orders for the various specialties turned out by the Acme Stationery and Paper Company. He says trade looks very promising everywhere he visited.

Charles F. Wingate, at one time associated with this paper, has dissolved his connection with the *Sanitary Engineer*, with which he has been associated in an editorial capacity since its foundation, to devote himself entirely to sanitary house inspection. Mr. Wingate was called as an expert to examine the premises of Samuel Crump, at Montclair, N. J., where a late outbreak of diphtheria carried off three of Mr. Crump's children, and his report in the last issue of the *Sanitary Engineer* shows that the disease could not be traced to defective plumbing. Mr. Wingate has also taken charge of a class for the instruction of plumbers' apprentices at the new Technical Schools at the Metropolitan Museum of Art, for the technical training of all classes of workingmen. These schools, thus far, have been very well attended, and the new addition of a sanitary course of instruction will doubtless add to their interest and value.

D. Lothrop & Co., the Boston publishers, have issued a circular to American artists, offering $1,600 in prizes for book covers and magazine illustrations, in black and white and in colors. The first set of prizes, amounting in all to $750, is for book cover designs. The amount is divided as follows: $200 for the best design in colors for a bound volume (board edition) of *Babyland* magazine, 7 by 9 inches upright or 15 by 9 inches oblong, running around entire book, for reproduction by lithography of not more than ten printings; $200 for best design in colors for cover of bound volume (board edition) of *Wide Awake* magazine, 7 by 9 inches upright, for reproduction by lithography of not more than ten printings; $100 for best design for cover of bound volume (cloth edition) of *Wide Awake* magazine, 7 by 9 inches upright, back 1¼ by 9 inches upright, for reproduction by not more than three printings; $100 for best design in colors for cover of juvenile book (boards), 6½ by 8½ inches upright, for reproduction by lithography of not more than ten printings; $100 for best design in colors for juvenile book (boards), 4 by 6¼ inches upright, for reproduction by lithography of not more than ten printings, and $50 for best design for cover of juvenile book (cloth), 4¼ by 7 inches upright, for reproduction by not more than three printings. For the best three drawings in black and white, for reproduction by wood engraving or "process," adapted for frontispieces, for *Wide Awake* magazine, $600 is offered, divided as follows: First prize, $300; second prize, $200, and third prize, $100. Size when reduced, 6 by 7¾ inches. For best designs in colors, suitable for frontispieces to juvenile books, for reproduction by lithography of not more than ten printings, $250 is offered, divided as follows: $150 for size 6 by 7¾ inches, and $100 for size 3½ by 5½ inches. Competitors may submit any number of designs and may compete for all the prizes. The judges will be two gentlemen and one lady connected with the art department of the house. All designs must be in by April 15. The prizes will be awarded on April 25. There will be no public exhibition.

A private view of the designs for the Christmas card competition for prizes offered by L. Prang & Co. was given last Friday evening, and since then the exhibition has been open to the public. Over one thousand designs were sent in, but of these many were rejected. As a rule, there is very little originality in the designs, and many of them seem to have been drawn without reference to the purpose for which the competition was started. Whatever designs shall win the prizes, it is certain that Prang & Co. will do their best to make them acceptable to the public. The judges in this competition have made the following awards: First prize, of $1,000, to design No. 36, by Elihu Vedder; second prize, of $500, to design No. 52, by Dora Wheeler; third prize, of $300, to design No. 34, by C. C. Coleman; fourth prize, of $200, to design No. 442, by Rosina Emmett. The judges who awarded them were John La Farge, Samuel Colman and Stanford White. Louis C. Tiffany, who was one of the judges, was unable to serve, and Mr. White was chosen by the two other judges to take his place.

Charles T. Bainbridge's Sons have been hard at work for the past two weeks making the invitations for the inaugural reception of President Garfield. The invitation is a steel plate engraving by the Homer Lee Bank Note Company, of this city, on its translucent bristol, and they think it the finest piece of work of the kind ever engraved, as well as the most costly. The envelopes, 15,500 in number, are the largest ever made of the kind, being 7 by 10 inches in size, cutting only two out of a double large post sheet, wedding shape, and embossed on the flap with the United States coat of arms or seal. This firm shows ten beautiful designs of fringed Easter cards at from $1.25 to $6 per dozen net. Most of these goods are without inscriptions, and are claimed to be salable at any time of the year, even if carried over Easter.

The Acme Stationery and Paper Company, 117 Fulton street wants the trade not to confound the name of its concern with that of the Acme Letter File Manufacturing Company, 49 John street, against which McDowell & Co., of Lambertville, N. J., recovered a judgment last week. Owing to the similarity of names the first-named has been put to a great deal of annoyance in many different ways.

The Orange Judd Company, New York, has published "Barn Plans and Outbuildings," a work which deals with all kinds of plans for outbuildings for farming purposes. The low price of this book, $1.50, brings it within reach of a large class of people who have been unable to buy costly treatises on such subjeets. The work has over 250 illustrations.

Market Review.

OFFICE OF THE AMERICAN STATIONER,
WEDNESDAY, February 23, 1881.

THE MONEY MARKET.—The money market continues to work smoothly, the supply of loanable capital being fully equal to the requirements of borrowers. The prevailing rate for call loans on pledge of stock collateral was 5 per cent., the extreme rates being 4 and 6 per cent. There were, however, but few transactions at the higher figure. The government bond dealers found ready accommodation at 3@4 per cent. The range of quotations for time loans was 3 and 5 per cent. In the discount market, prime mercantile paper ruled between 4 and 6 per cent., but most of the business was done at 4½@5½ per cent. The stock market has shown great activity, and the tone has been strong. The week opened with a buoyant market, and the general tendency was in the direction of higher prices. Later on the market became feverish and unsettled, and a portion of the early improvement was lost. At the close, however, the dealings were characterized by an extremely buoyant tone, and in many cases the final sales were at the highest figures of the week. The improvement on the week's transactions ranged from 1 to 12⅞ per cent. The government bond market was fairly active throughout the week, and became quite buoyant on the announcement of the passage by the Senate of the Funding bill with 3 per cent. as the rate of interest. Some round amounts of the 4½'s and 4's were taken at much higher figures than were current last week. Railroad mortgages were very actively traded in, and in the early portion of the week recorded a material advance in prices, the rise being assisted by the steady advance in the share list. Foreign exchange was dull and weak, and the nominal asking rates for sterling have been reduced ¼c. to 4.84 and 4.86½, with an actual business at 4.83@4.83¼ for bankers' 60-day bills and 4.85½@4.86 for demand. Paris francs are selling at 5.25@5.24⅜ for long and 5.21⅞@5.21¼ for checks, and reichsmarks at 94¼@94⅜ for 60 days and 94⅞@95 for demand.

THE PAPER MARKET.—The market is devoid of a single new feature. While most manufacturers are still fairly engaged nn orders, many of our large jobbing houses report only a moderate trade doing, and there is some little disappointment that the movement of goods for the spring trade is, this year, somewhat later than usual in making its appearance This, however, may be accounted for by seasonable influencos. Manilla wrappings lead in point of demand at present, and supply and demand is probably more evenly balanced than in any other grade. We are told that the following is the range of prices at which some of our city journals are being furnished with their supplies of paper, most of them on contract: Daily *Herald* and *Evening Telegram*, 7¼@7½c.; *Sunday Herald*, 7¾c.; *Tribune*, 6⅝c.; *Times*, 7¼c.; *World*, on an old contract, at 7¼@7½c.; *Sun*, 7@7½c., for a part of its supply, and on an old contract for 9c for another portion; *Staats Zeitung*, 6½c.; *Journal of Commerce*, 6¾c., cash; *Commercial Bulletin*, 7c.; *Evening Post*, 6¾c.; *Commercial Advertiser*, on yearly contract, 7¾c.; *Evening Express*, 7½c.; *Daily News*, 6¾c.; *Sunday* do., 8c.; *Truth*, 7¼c.; *Sunday Mercury*, 7½c.; *Dispatch*, 8¼c., and the *Graphic* and *Harper's Weekly*, both using a machine super-calendered paper, the former supplied at 9c. and the latter at 10c.

THE STATIONERY MARKET.—We have very little to add to our report of last week. With a week or ten days more of good weather, out of town buyers may be expected to make their appearauce in the city, and spring trade will receive an impetus. In strictly staple goods, business at present is, as it has been for several weeks past, chiefly confined to the supply of the near by and city trade and in the duplication of small orders to keep up assortments of country dealers. The activity in Easter cards is very brisk, most all of our large houses in the city reporting the continued receipt of very large orders, with the stocks of some of them running very short. In this line of goods, although the season for the wholesale trade will last for several weeks longer, the aggregate of the sales thus far is generally said to be the largest the trade has ever experienced. We hear of several importations of select lines of fancy goods having come to hand this week, and among them are to be found some novelties which have been chosen with great care by the representatives of the respective houses. We hear of no change being reported in the prices of staple goods, which, as a general thing, rule very steady.

PAINTING ON BROWN PAPER.

Among the greatest treasures of the Turner drawings exhibited at the National Gallery are the two called "Angry Swans," painted in white on common brown paper which has been around a parcel. Turner, seizing the first thing that came to hand as a background to the white, painted them with half a dozen strokes apiece. The body color is thinner in places where the plumage is to be semi-transparent, thicker where the highest lights fall on the snowy white; and there they are, in the power and majesty of their anger, the stateliness of their sailing, the changeful curving of their necks, the sweep of their spreading wings, and the snow of their breasts like ruffled velvet. Half a dozen strokes of a brush, a little white and black paint, and bit of waste paper, have set them all before us with Turner's unrivaled skill.

Even to think of such work as this in comparison with our own may either inspire us with emulation or fill us with despair; it depends in a measure upon what is born with us—whether the *ed anch 'io son pittore* be a teeming promise or an empty boast.

Brown paper of the darkest shade and thickest texture, and gray paper of a cool granite tint are just now much in demand as materials for painting upon for dados, panels, cornices and book covers, and other things. They give a background on which the light and shade are at once relieved, and while gray paper is the softest, brown paper, partly by the contrast of its rough surface gives the most relief. The best brown paper for the purpose is the stout, continuous kind used by paperhangers and upholsterers for backing, which can be had at all the carpet warehouses in any quantity.

The colors are paints in tubes, or water colors well ground with Chinese white; used with fine bristles or red sable brushes. Another method is to lay on the Chinese white, well ground to the consistency of thin cream, and when it is dry to paint over it with ordinary water colors. Red sable brushes are also the best for both the latter. Minute finish is out of character with the kind of work; the effects should be put in broadly, and the designs should be distinct and of few large objects. Brown paper will not bear much india rubber, and in laying on the Chinese white it is better, if possible, to do so without any outline at all. If one is necessary, it should be either transferred or sketched in with charcoal, which can be dusted off if a mistake is made. Neither paper requires sizing previously or varnishing afterward. All water color painting, on whatever material, can be removed and therefore smudged with water; therefore, door panels, book covers or anything else to be painted must be carefully cut out, fixed in place with embroidery paste, and left to dry thoroughly, before the coloring is begun. A dado can only be properly put up by the paperhanger. Book covers should be turned over the edges and faced with colored paper.

A good design for door-panels is four water plants, one in each, standing up immediately from the bottom, with a few horizontal lines behind them, to give the idea of water, the actual line of the horizon being an exact level in all four. The left hand upper panel may be the arrow-head, with blue butterflies; the next a yellow iris, with green and gold dragon flies. The right hand lower one can have bulrushes, with a butterfly; and the left the flowerish rush, with white butterflies again. A brown screen would look well with sunflowers and bulrushes, with blue butterflies on alternate panels, the yellow and the brown shading into the color of

the ground. For gray paper, flights of swallows, with peach and plum or cherry blossoms here and there, would be suitable. Flat conventional flowers, like those in leaded glass, are adapted for painting of this kind; and when they are employed the background may be diapered with a darker shade of the same color, using sepia or vandyke brown for the brown paper, Payne's gray for the other tint.

Studies of flowers, to be afterward combined and painted from four designs, are easily and quickly made on brown and gray paper; and it is excellent practice to copy casts on it in white, leaving the paper itself for the deepest shade, using thin white for the half lights and thick for the highest. Borders can also be painted in white, shaded with vandyke brown or Payne's gray.

Brown paper may be gilt by using Judson's or Bessemer's gold like ordinary paint. The color of the gold will be much richer if the design is previously gone over with vermilion; and it must be outlined with black, the darkest shade of brown or vermilion on the right side. As lettering is particularly easy of execution and effective in its work, it is suitable for mottoes and inscriptions.—*The Queen.*

The Derrickson Card Works, 22 Frankfort street, have brought out something original in the line of card receivers. These come in two styles, and are embossed in the shape of a plate, with very pretty chromo flower designs and a fancy border ornamenting the rim. Some have varnished surfaces and others are plain, and are supplied to the trade at $60 per M, with usual discount. The concern is so rushed with orders for chromo and bevel edge cards, particularly the former, that it is not sending out any traveling salesmen this season, and orders flow into it from every part of the country.

Four bronze statuettes, which have recently been found at Pompeii, are now to be seen at Naples. One is a magnificent work about 2 feet high, representing a cupid holding a dolphin on his right shoulder, the head of which he grasps with his left hand. This figure was found on a pedestal at the side of the entrance to the peristyle of a newly excavated house and was a fountain. From the mouth of the dolphin water fell into a beautiful marble vase placed on a marble column. In a niche on the right of the atrium of the same house were found three other bronze statuettes. The one in the middle was placed on a square base. It represents the Goddess of Abundance, having in her right hand a silver plate; in the left a cornucopia full of fruit and flowers. It is draped with a long tunic with short sleeves and a mantle, and is seated on a cushioned chair with magnificently ornamented arms, each of which has a triton at the extremity. The feet of the goddess is sandaled and rest on a footstool decorated with two sphinxes. The two lateral statuettes represent two lari, each with a ryton in the right and a plate in the left hand.

TO WORK ULTRAMARINE INK.

As almost all grades of this beautiful blue printing ink is found to be particularly difficult to work and succeed in getting its pure effects, we here suggest a method by which much time and satisfaction can be gleaned:

Take moderately soft glue and molasses rollers that are well seasoned on the face, as well as perfectly clean; then apply the ink to them and the distributing surfaces. It will be found that in a very short time the ink has become well distributed, and the rollers will coat the form with an even and brilliant covering of color, which will adhere to the paper as easily and closely as any other ink.

Do not carry too great a depth of color, but just sufficient to cover close and bring out the brilliancy. This treatment will also apply to what is known as emerald green, &c.

Under no circumstances sponge rollers with water when about to use them in connection with ultramarine. To do so will cause the color to take in stringy spots, while the moistened parts on the rollers will reject it. Of course, after a time, the water will evaporate; but it will also leave the ink and rollers in a bad condition, so that instead of an easy manipulation, it assumes a coraceous mass, which will take considerable time and trouble to effectually dissipate.

We also recommend that rollers containing glycerine or other fatty substances be ignored in working ultramarine, as the peculiar character of the pigment used in the manufacture of this ink is characteristic to the efficiency of such rollers, both in distribution and covering.

There can be but little doubt that there is no other color of ink that is found more difficult of treatment. Printers everywhere have found this to be a stern fact, and have labored to solve the difficulty, because of the peculiar richness of the color; and many of them have discarded its use altogether, but for very unsatisfactory reasons. Indeed, many a "batch" of this ink has been returned to the maker and condemned as "very bad," only because of ignorance as to the peculiarity of its basis and the method of its application.—*American Model Printer.*

The Ternikoff process, recently invented, for producing artificial stone, is described in the foreign journals as successfully meeting some of the difficulties hitherto presented in this industry. According to the method in question, a mortar, consisting of equal parts of lime and sand, is exposed for a few hours to a temperature of 150° centigrade in the presence of water vapor. The paste, having been taken out of the furnace, is passed under the cylinder of a machine like that used for the molding of bricks, and it comes out in the form of cubes, which, on being exposed to the air, becomes very dry and hard; in the course of some eight or nine hours the cubes acquire a hardness equal to that of good building stone, and are fit for use. This new stone is, in fact, a sort of brick of mortar baked, at a low temperature, and the cost, too, is about the same as that of bricks.

While a boy was bathing at the opening of a channel connecting the Fountain of the Virgin and the Pool of Siloam, at Jerusalem, he discovered a rock, upon which were graven a number of Phœnician characters. They are small and finely wrought, but, unfortunately, not deeply cut. Part of the stone is submerged and hidden by a silicate deposit. After the channel has been drained and the deposit carried away, it is expected that considerable light on the topography of Jerusalem will thereby be gained.

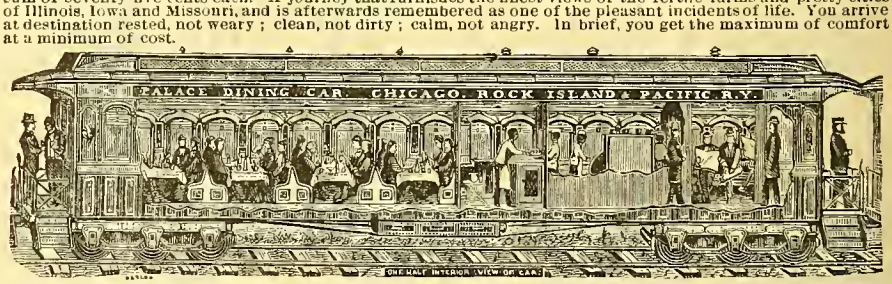
"THE GREAT ROCK ISLAND ROUTE"

Calls your attention to the following REASONS WHY, if about to make a Journey to the GREAT WEST, you should travel over it:

As nearly absolute safety as is possible to be attained. Sure connections in UNION DEPOTS, at all important points. No change of cars between CHICAGO, KANSAS CITY, LEAVENWORTH, ATCHISON or COUNCIL BLUFFS. Quick journeys because carried on Fast Express Trains. Day cars that are not only artistically decorated, but furnished with seats that admit of ease and comfort. Sleeping cars that permit quiet rest in home-like beds. Dining cars that are used only for eating purposes, and in which the best of meals are served for the reasonable sum of seventy-five cents each. A journey that furnishes the finest views of the fertile farms and pretty cities of Illinois, Iowa and Missouri, and is afterwards remembered as one of the pleasant incidents of life. You arrive at destination rested, not weary; clean, not dirty; calm, not angry. In brief, you get the maximum of comfort at a minimum of cost.



ONE-HALF INTERIOR VIEW OF CAR.

That the unremitting care of the Chicago, Rock Island & Pacific Railway for the comfort of its patrons is appreciated, is attested by its constantly increasing business, and the fact that it is the favorite route with delegates and visitors to the great assemblages, political, religious, educational and benevolent, that assemble from time to time in the great cities of the United States, as well as tourists who seek the pleasantest lines of travel while *en route* to behold the wonderful scenes of Colorado, the Yellowstone and Yosemite. To accommodate those who desire to visit Colorado for health, pleasure or business, in the most auspicious time of the year, the Summer season and months of September and October, the Company every year puts on sale, May 1st, at all coupon ticket offices in the United States and Canadas, round trip tickets to

DENVER, COLORADO SPRINGS AND PUEBLO,

At reduced rates, good returning, until October 31st. Also to San Francisco, for parties of ten or more, good for ninety days, at great reduction from regular fares.

REMEMBER, this is the most direct route for all points WEST and SOUTHWEST. For further information, time-tables, maps or folders, call upon or address

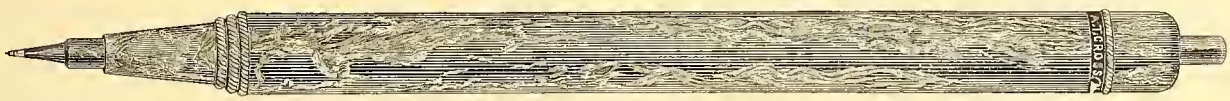
PERFECTED STYLOGRAFIC.

The original and genuine Pen. Warranted the best made. Thirteen Patents granted to **A. T. CROSS,** the last, June 29, 1880, being the most important and giving the name **Perfected.** All cuts are exact size



MAXIMUM.—Holds most ink of any pen made; tires the hand less than smaller barrels. Fits Hambler's Pocket. Same price as Long

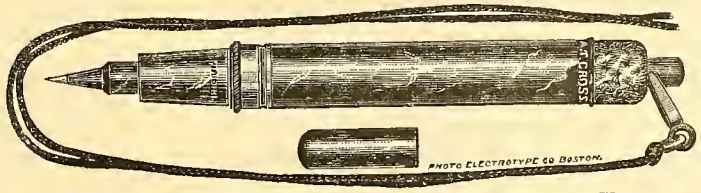
LONG.—The famous Desk Pen. Extra long. Holds most ink, except the **Maximum.**

SHORT.—Most widely known and sold heretofore; but Maximum is better for desk

or Hambler's Pocket, Giant for Vest Pocket or Cord. So this will be largely superseded.

Thirteen patents granted; seven more applied for; more genuine improvements; better record; more styles; larger stock; more thoroughly protected by patents than all rivals combined.

☞See Descriptive Circulars.



GIANT, with Cord and Gold Ring, same price as Short.

Dealers and agents supplied with wood, glass and paper signs, placards, circulars, leaflets and cuts. We make both largest and smallest Pens, both of which will have all new improvements.

THE PAPER TRADE IN THE CITY OF NEW YORK.

[Continued.]

One of the most interesting and useful careers in the whole range of the paper trade was that of H. V. Butler, who, as a dealer, maintained a long and prosperous existence in this city, and as a manufacturer, both here and in Paterson, N. J., was equally successful, and the originator of many improvements in paper making, and also the first to utilize several kinds of stock now in general demand.

Henry V. Butler was born in Suffield, Conn., in October, 1811. At the age of eighteen he came to New York city, and was for some time a clerk in the house of Mannus, Booth & Ufford, in Pearl street. He was a son of Asa Butler, who had a paper mill in Suffield, known as the Eagle Mill, where paper was made by hand, and who afterwards, in 1832, bought from a Mr. Morris a steam paper mill in Cherry street, in this city, upon the site now occupied by Hecker's flour mill. About this time H. V. Butler became a partner with his father, and there they made the paper on which the first number of the New York *Sun* was printed, Moses Y. Beach then being editor. At this mill, for the first time, paper shavings were used as stock and worked over into paper. This was started by Mr. Morris, who at first obtained his shavings for merely taking them away from the publishers. In 1833-4 the price had advanced from nothing to 1 cent per pound, at which time the price of paper made from them was 12½ cents per pound. Here the first paper was made for the Philadelphia *Ledger*. This mill not having a sufficient supply of good water, H. V. Butler began to look around for a more suitable place for a paper mill, and finally decided on Paterson, N. J., as a location. Roswell L. Colt, governor of the Society for Establishing Useful Manufactures, agreed to build him such a mill as he should direct. The result was the erection of a fine, substantial mill of stone, on the upper raceway of the society. It was called the "Passaic" mill, and stood where now stands the millwright shop of the Rogers Locomotive Works. This mill was finished in the year 1837, and was furnished with two Fourdrinier machines (one 62-inch and the other 54-inch) of the most perfect construction then known.

The Passaic mill soon became famous for producing the best quality of book paper in the market. This paper gained a wide reputation, and was in great demand by such houses as the American Bible Society, Appleton's, Carter Brothers, the Methodist Book Concern, &c. The peculiar toughness and strength of the paper, which gave it its pre-eminence over all others, was due to the materials from which it was made, old hemp rope, knots and cuttings from the cotton presses of the South, costing about a cent a pound, and cotton waste from the New England cotton mills. Mr. Butler was the first to utilize these waste products, and by the use of pickers or "devils" of peculiar construction he succeeded in using the rope knots which other manufacturers, who afterwards used the long hemp ropes, could not use. He made contracts for many years with the great cotton corporations of Lowell for all their waste, and maintained there a resident agent to collect and pack it. He made in this mill the first super-calendered book paper ever manufactured. Peter Adams, so long a well known member of the trade, was foreman of this mill, and subsequently of the Ivanhoe mill, for many years.

Mr. Butler was one of the first to use the rotary bleach boilers, having them put in soon after the Passaic mill was built. The chlorine

gas bleach was used here only, and continued during the existence of the mill. Mr. Butler was the first manufacturer to put up his book paper in reams of 480 perfect sheets, without using broken sheets as outside quires. The Passaic mill proved to be very profitable, and contributed a large part of the money required for the building of the Ivanhoe mill, which was completed and put in operation principally on superfine sized and super-calendered book papers in 1850. In 1857 the lease of the Passaic mill having expired, the mill was abandoned, and shortly afterward the capacity of the Ivanhoe mill increased. The firm owning these mills was H. V. Butler & Co., the "Co." being Robert L. Taylor, a shipowner of large means in active business in New York, but who took no part in the management of the paper business, which was controlled wholly by Mr. Butler. The firm had its office at 80 John street for many years, and afterward moved to 13 Park place.

About the year 1859 or 1860 the firm began making tub-sized writing paper, and the "Ivanhoe" brand becoming widely known the demand for a long time exceeded the capacity of the mill for producing.

In 1866 the firm organized the Ivanhoe Manufacturing Company, under a special charter, which it had obtained some years before from the New Jersey Legislature, and the firm of H. V. Butler & Co. wound up its business. The manufacture of paper has been since conducted by the Ivanhoe Company.

In 1868 the company, not caring to continue its mercantile house in New York, Mr. Butler associated with him his son, Henry V. Butler, Jr., and, under the name of H. V. Butler & Son, commenced a commission paper trade at 62 Reade street. Under contract with the Ivanhoe Company, Henry V. Butler & Son transacted all of that company's business of purchasing and selling.

In 1871 the partnership of H. V. Butler & Son having expired by its own limitation, a new partnership was formed under the name of H. V. Butler, Jr., & Co., composed of H. V. Butler, Jr., and A. Gibbs Campbell, as general partners, and H. V. Butler as special partner. The new firm carried on the same business as the old firm. H. V. Butler, Sr., retired a year later, and died in 1872. The firm of H V. Butler, Jr., & Co., still carries on the business at No. 32 Reade street.

BYRON WESTON

DALTON, MASS.,

HAS BEEN AWARDED THE

GRAND PRIZE GOLD MEDAL

AND RECOMMENDED THE

Medal of Honor and Perfection

At PARIS, 1878,

This being the **HIGHEST and ONLY AWARD** given for

LINEN RECORD and LEDGER PAPER.

—A SPECIALTY.—

THIS Paper has received THE HIGHEST PREMIUM over all others from *the Cincinnati Industrial Exhibition*, *Massachusetts Charitable Mechanics' Association*, *Franklin Institute* of Philadelphia, Louisville Exposition, Medal and diploma from *United States Centennial Commission*, *Medal of Progress American Institute*, *1877*, *and Medal of Improvement and Progress*, *Boston*, *1878*. Its

PRINCIPAL ADVANTAGES

are as follows:—1. It contains more LINEN than any other Ledger Paper, has a longer fibre, and is, consequently, tougher. 2. Having a harder and better body, it frays less in erasure, so that by simply using the rubber after the eraser, the ink is prevented from spreading. 3. It is more uniform in Weight Color and Finish. 4. It never cockles if properly bound. 5. Its chemical action upon ink is such that it both writes and rules up better. For proof of the foregoing, refer to a large number of Stationers, Bookbinders, Bookkeepers, and Recorders, who have given it, after a severe test, the preference over all others. This paper is *Double Sized*, and will stand any climate or the most acid of fluid inks.

☞ **Send for sample sheet, ERASE and REWRITE FOUR TIMES on same spot.**

Each sheet is water-marked with name and date.

LIBRARY OFFICE

Correspondence.

BOSTON NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

BOSTON, Mass., March 1, 1881.

Dealers report a fair trade during the past week and the reception of regular spring orders, the calls for the most part being for staple and moderate priced goods, including the usual varieties of writing papers, envelopes and divers small stuff usually kept on sale in country stores.

Customers from Maine, New Hampshire and Vermont report a large quantity of snow in their respective localities, and that when real spring sets in the roads will be "awful" and business interrupted for the time being. Not until settled weather comes will trade come along in goodly propertions. City and vicinity trade keeps up well, and there has been quite a demand for the more expensive and unique kinds of goods.

A new style of note paper is a heavy, double laid page, in creamy white or a delicate violet tint; having that delicate roughness of surface which catches without obstructing or irritating the pen. The envelopes are made to match.

The sale of the private library—a collection of rare books—of Chester Guild during the week realized high prices. The Public Library purchased the Boston *News-Letter* from 1718 to 1726, and *Weekly News-Letter* from January 5 to July 30, 1727, bound in one volume, for $91.

Hooper, Lewis & Co., stationers, Milk street, have found their business relations of so extensive a character as to necessitate new and spacious quarters for their bookbinding department, and they will occupy the additional story which is to be added to the Old South Chapel, Spring lane, but connecting with their store on Milk street.

The loss by fire on the property of Rockwell & Churchill, printers, has been adjusted at $15,210.

Lathrop & Co., publishers of juveuile and other story books, offer premiums for the best designs of illuminated covers. Some of the more fastidious of this city rather don't like the subject of Prang's first prize Christmas card. They say it might do for Pagan times. But isn't Christmas a Pagan institution anyway? Perhaps a thin woman, dressed in a fur-lined circular and wearing a flaring hat and French boots, and leading a pug dog, might have been preferred by the over-fastidious as a model for a Christmas card. But it is hard to suit some people.

Mr. Howells, recently editor of the *Atlantic Monthly*, instead of going abroad this year and filling a consularship, has just purchased for himself a house in Boston, and is about to move into it.

Ward & Gay, 178 to 184 Devonshire street, report an excellent trade in cards, fine papers, &c., of which they have large stocks in great variety.

Humphrey's parlor cue alley, manufactured by D. B. Brooks & Co., 117 Franklin street, still meets with a good sale, and has become justly popular in all well regulated families. The Congress Record ink made and sold by this firm gives great satisfaction.

The railroad and commercial red rubber bands and rings manufactured and sold by Z. Delano, Boston, have become very popular with stationers dealing with large corporations.

Those who run may read. Winkley, Thorp & Dresser, 117 Devonshire street, have recently placed a series of very attractive signs on the east end of the large building occupied by them. These signs in gilt mean something more than a pantomimic business.

W. H. Hill, Worcester, at the head of the oldest established manufactory of machine-made envelopes and envelope machinery in the United States, reports a good business for the season of the year.

"The cement of the ancients," advertised in THE STATIONER, is having large sales, and the "Cimitoline" is proving itself a superior mucilage. Much of the so-called mucilage in the market fails to "stick."

"Shadow" stationery, the proper thing for sentimental ladies, has made its appearance. Some of it is in soft gray tones, with gray and white cattails and grasses on the corner of the note sheet and flap of the envelope.

J. R. Osgood & Co. are soon to begin the publication of a series of anonymous novels. L.

PITTSBURG NOTES.

[FROM OUR OWN CORRESPONDENT.]

PITTSBURG, Pa., February 28, 1881.

There is a generally good business here, and it would be difficult to mention any one branch of industry that is not flourishing.

J. R. Weldin & Co. report trade as good, and Mr. Mason, the head of the house, told me that he didn't want anything better than a continuation of the present state of affairs. He bought largely of valentines from Prang, Dando and Marcus Ward, and sold them all; if he had had more he could have disposed of them. Langfeld, Turner & Andrews' leather goods are sold here, and meet with a great demand. W. H. Hill's envelopes, for which J. R. Weldin & Co. are sole agents here, take up nearly an entire floor, and to keep the stock complete it has to be renewed constantly. The letter papers marked 303 and Weldin Mill, which belong exclusively to this firm, are much appreciated here.

W. G. Johnston & Co. are also quite busy. Independently of their magnificent stock of general stationery, they make a specialty of blank books, and have a well deserved reputation as printers. They excel in general job work, circular printing, menu cards, &c. S. Read Johnston can be credited with the success of this department, over which he has control. He has discovered a process of producing very rich effects in printing with colors. This is called the "owltype," and many original designs are secured with it. As a specimen of this work, I may mention a circular made for the American Hotel, at Richfield Springs, and several bills of fare for New York houses. George P. Balmain has charge of the stationery department, where may be found the products of the best factories and all kinds of staple and fancy goods. Alexander P. Newton, for eighteen years with the house, is its principal salesman.

The stylographic pens are coming into favor in this city. Livermore's has met with a good sale here. The agent, Joseph Horner, has sold a good number of these pens, and the trade is increasing daily. Mr. Horner, who gives particular attention to the sale of Methodist books, is also a wholesale and retail stationer. His assortment of Fairchild's gold pens is fine. He makes a specialty of Sunday school cards, as published by Prang, Marcus Ward and Dando (De la Rue), and has also a fine stock of leather goods from Langfeld, Turner & Andrews and from Rumpp.

I regret to announce the death of J. W. Pittock, founder of the *Evening Leader*, of this city, and owner of the stationery store which bears his name. Mr. Pittock was a self-made man. Originally a newsboy, by energy and hard work he attained the position which he has just left. He never forgot his beginnings, and was always trying to improve the condition of the little newspaper venders. His death resulted from Bright's disease, and after the physician had given him up it was only a question of time.

Charles F. Peck & Co., printers, bookbinders and stationers, have been taking stock, and have reason to be pleased with the profits of their last year's business.

G. W. Reed & Co. are compelled, by the increase of business, to enlarge their store. When you get this letter Mr. Reed will be in New York looking up new goods. He is satisfied with the results of the past year, and he looks for a

good spring trade, his travelers now being en route.

I shall give you more news concerning the principal stationery houses of this city in my next letter. J. VIENNOT.

CINCINNATI NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

CINCINNATI, O., February 28, 1881.

Stringency in trade is confessed, but the bad weather is accused of causing the trouble.

Beeler & Co., retail dealers on Fountain square, have gone out of the business, and now E. M. Johns, on Fourth street, opposite Pike's Opera House, exhibits a big placard bearing the words, "Closing out sale." Mr. Johns is in a state of uncertainty as to what his future operations will be. His course is a matter of prudence —not of compulsion.

W. B. Carpenter confesses that February has been dull, and others unite in the same sort of testimony. Wm. J. O'Neil, at J. R. Mills', scowls with his brows and smiles with all the under features as he brings accusation of sluggishness against the month and the weather.

Louis Snider's Sons, whose mill at Hamilton, Ohio, was only partly destroyed by fire, have the restoration completed except the calendering machinery. The damage was not so great as at first reported. It was only a wing of the mill that was destroyed. Before this reaches the readers of THE STATIONER, the mill will be in full operation, producing every description of hook and news paper except calendered book paper. In that there would have been no delay were it possible to produce calendering rolls instantaneously. As that is one of the impossibilities in the present state of the mechanical arts, time is required to restore that portion of the appliances for complete work. Louis Snider's Sons report a great increase of sales of news and book paper, and their territory is very broad, reaching from the Gulf to the shores of the lakes, and from the foot-hills of the Alleghenies to the splintered ridges of the Rockies.

The Friend and Fox Paper Company has removed its office from among the carts, cars and lumber wagons of Second street, up to the palatial Wiggins block at the corner of Vine street and Fifth avenue, on Fountain square. It is a step from darkness to light and from gloom to brightness, as far as such a step is possible in a dust-begrimed and smoke-beclouded city as Cincinnati.

The Cincinnati branch of the Dennison Tag Company reports a rapidly increasing sale of staple goods—principally paper clamps and holders—on the line of the Cincinnati Southern Railway and its connections. That company has quite a line of its stock of artificial flowers manufactured here in Cincinnati. Everybody here is crazy on the subject of fine art. The School of Design started the trouble, and then came along the College of Music and aggravated it, and now eruptions in art schools, art factories, musical conservatories, have broken out all over the city. Isn't it queer, though, that while harmony is one of the essentials of all good art, the very antipode of harmony does seem to be characteristic of all artists, good, bad and indifferent?

"What's this panic in Wall street going to do with business in the great valley of the West?" I inquired of a leading paper dealer half a dozen hours after the mischief had reached its worst. "Nothing at all," he answered, and then he observed. "The business of this valley is too solid, too self-poised and too independent of those people to be disturbed by one of their internal commotions." "But," continued I, "are not business men everywhere, in all the towns, large and small, dabbling in stocks?" His answer was: "We watch that. If we find a customer drinking too much, or —— on gambling, or dabbling in stocks, we cut him short."

Visits from representatives of the trade have been few during the protracted winter. A representative of Carson, Brown & Co., Dalton, Mass., and J. G. Mundy, of the Power Paper Company, of Springfield, Mass., have been here. They are not discouraged at the prospects and local dealers here think they see a flattering outlook for spring trade. PRINCE WILLIAM.

CHICAGO NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

CHICAGO, Ill., February 26, 1881.

It speaks volumes for the enterprise of some Chicago trade journals to find in a number of a certain paper, issued on February 24, a notice respecting a Chicago house copied verbatim from my letter to THE AMERICAN STATIONER, issued on the 17th, and, worst of all, copied without quotation marks.

The "Monarch Saw" man, Henry C. Dean, brought an action recently against Mr. Brewster —Lord & Brewster—on the charge of perjury. Since then he has been the recipient of considerable, not complimentary, notice by the *Inter-Ocean*. Result: An action for trespass against the paper, with damages laid at $25,000.

A. G. Spalding & Brothers have recently removed from 118 Randolph street to better and ampler quarters at 108 Madison street, where I called upon them the other day. The new establishment will be finely fitted up, and the firm intends carrying a complete and large assortment of general sporting goods. So extensive are to be the new supplies that the proprietors claim, when the arrangements are completed, they will have "the largest establishment of its special kind on this continent, if not in the world."

Mr. Kimball—Readers and Writers Economy Company — is about starting upon his "long tour."

George H. Taylor & Co.—late Cleveland Paper Company—report demand ahead of supply and business "booming."

H. A. Taylor, agent for Livermore's new stylographic pen, has, I am glad to say, been having a great "rush" during the week just finished. He has disposed of two gross of the pens and gained several new customers. So popular is this pen becoming, that he is in receipt of orders as far west as San Francisco; and is even catering to the Pacific export trade. Nearer home, a trip to Aurora, Ill., gave results, he says, far beyond his expectations.

A pleasant little affair occurred the other evening at Culver, Page & Hoyne's. Upon the occasion of J. P. Kelly leaving the service of the house, his fellow employees presented him with a beautiful Elgin gold watch. The case is finely engraved and chased, and upon the inside of the case appears the legend: "Souvenir from your friends." A neat presentation speech was made by Mr. Richardson, who takes Mr. Kelly's place. The new firm of Brown & Kelly is getting rapidly into shape, and as soon as the goods, now on the road, arrive, Chicago will greet and patronize a new and enterprising firm in these two gentlemen.

I regret to close my letter by noting the death of a prominent young journalist of our city. Ernest Buhlert, recently of the *Staats Zeitung* and the *Arbeiter Zeitung*, died in this city, after a lingering decline, on February 24. The funeral on last Sunday afternoon was largely attended by his many friends. G. B. H.

MICHIGAN NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

DETROIT, Mich., February 28, 1881.

It usually takes the people here considerable time to get ready and find out what others are doing unless they expect a rush of visitors from elsewhere; but I remark that several of our business men have suddenly learned that their health required a change of climate, and that they all feel willing to go South about one time, taking in New York on their way to see the inaugural festivities. The manager of the Detroit News Company, Mr. Marsh, is found among the many. I hope they will all get a pass, and good quarters.

Referring to the license as now required by the authorities of Washington, D. C., and some other cities, the question has been asked your correspondent, why don't THE AMERICAN STATIONER push it with the Stationers' Board of Trade? A traveling man may be a "drummer;" but in most instances he is also a gentleman, and when he enters his name on the register of any hotel in Washington, he does not expect to be arrested because he has not taken out a license or employed some broker to sell his goods for him. Some few traveling representatives avoid Washington now entirely, not wishing to be "shadowed" from store to store, and have their samples seized just as the train is leaving for other cities. There are some traders in various parts of the Western and Southern States who have carried on business for many years, kept large stocks of various lines of goods, and have never visited New York, although their goods were bought of traveling salesmen soliciting orders.

As Lathrop & Co. now offer $1,500 for best designs in book covers, it is hoped that some of our really gifted Detroit artists, both amateur and professional, will step in and bring a prize as far West as this beautiful Detroit.

The Detroit *Ledger*, a sixteen-page society paper, hailing from 137 Griswold street, and having a strong resemblance to the Detroit *Graphic*, issued its first number last Saturday. The owner's name is not given, but is very likely to be Mr. Traynor.

Captain Henry A. Ford, formerly of Kalamazoo, has written a two-volume, quarto work, entitled, "History of Cincinnati and Hamilton, Ohio," which is now in the press.

Paul Büchler, of Boorum & Pease, New York, is supplying the trade with some handsome pocketbook cases, also card cases, in calf, russia and seal. These are their finest goods, having paintings on them all done by hand, new lines of autograph albums, scrap books, and ornamented covers for books. Mr. Büchler went South as far as New Orleans, and reports business very good.

A Detroit firm has been trying to obtain the contract for some State work, but would not give its figures to the committee on over 12,000 copies. A State Senator and the Detroit Representative had a lively time at Lansing, it is stated, and the Detroit firm now proposes to publish an unlimited number of copies of the books at $2 per volume. C. N. Ayers, as agent for a new firm called the Michigan Publishing Company, offered to have the compilation of the laws made and furnished at $2.25 per volume. No action was taken on the proposition.

The new building of the *Christian Herald* is now ready for occupancy, and several firms are

moving in, among others, the leading society paper, *Every Saturday*, formerly located on Jefferson avenue.

In consequence of the recent advance in rents made by some Chicago landlords in that city, I learn that the American Sunday School Union, and American Baptist Society, of Chicago, will shortly remove into other quarters.

Although the season of Lent begins this year late, the ever enterprising firm of L. Prang & Co. has its representatives out all over the country.

A certain wide awake Detroit paper house has an eye on a new paper mill in this State, which is doing a nice business. One firm is sending out over 3,000 rolls of wall papers daily.

Among the representatives who have visited Detroit since my last letter, are W. F. Closson, with the Plimpton Manufacturing Company, Hartford, Conn.; Geo. H. Lovegrove, with S. S. Stafford, New York; Mr. Armstrong, of Armstrong & Son, New York; Mr. Ticknor, of Jas. R. Osgood & Co., Boston; Geo. H. Atwood, with Chas. Poltick; Arthur I. Clark, with L. Prang & Co., Boston; Paul Büchler, of Boorem & Pease, New York; Dwight Terry, with Baker, Pratt & Co., New York; F. O. Woodruff, with Ira Bradley & Co., Boston; The National Blank Book and Paper Company, New York; B. M. Jackson, of Linton Brothers & Co., Pawtucket, R. I.; Harry Gibbs, with Willy Wallach, New York.

The well known firm of Freedman Brothers, of this city, has closed its doors and hung up a card—"Closed for Inventory."

CITY OF THE STRAITS.

PASTE FOR PAPER.—To 10 parts, by weight, of gum arabic add 3 parts of sugar in order to prevent the gum from cracking; then add water until the desired consistency is obtained. If a very strong paste is required add a quantity of flour equal in weight to the gum, without boiling the mixture. The paste improves in strength when it begins to ferment.—*Chron. Industr.*

WATERPROOF BRANDING INK.—Shellac, 2 oz.; borax, 2 oz.; water, 25 oz.; gum arabic, 2 oz.; lamphlack, sufficient. Boil the borax and shellac in water till they are dissolved, and withdraw from the fire. When the solution has become cold, complete twenty-five ounces with water, and add lampblack enough to bring the preparation to a suitable consistence. When it is to be used with a stencil it must be made thicker than when it is to be applied with a marking brush. The above gives a black ink. For red ink, substitute Venetian red for lampblack. For blue, ultramarine; and for green, a mixture of ultramarine and chrome yellow.

Many persons are, perhaps, unaware to what an extent the decoration of fans has been carried. Such fans were early in vogue in Paris, having their origin in the luxurious courts of the Louis. The fashion is still kept up. A fan painted by Le Loir, the celebrated French painter, was exhibited at the Paris Exposition, 1878, and was sold to an American for $2,000. Some of the old French and Spanish fans are wonders of fine workmanship and artistic painting. Many of them are not only exquisitely painted, but the frames are profusely loaded with valuable jewels. The collection of old fans is as much the delight of art collectors as that of old pottery. Some of the old Spanish fans, though soiled and yellow with age, sell for fabulous prices.

L. PRANG & CO.'S
Easter Cards for 1881.

We take pleasure in herewith presenting to the trade our Price List of Easter Cards for this Season:

ASSORTMENT.—Our Easter Cards are made up in sets of one dozen, except Nos. 11 to 19, and are put up in a box or envelope. Each set contains all the designs of the series; and as no series has more than six designs, each design is more or less repeated in the set.

ENVELOPES.—Fine Cream-Tinted Envelopes are furnished with every series, without extra charge.

EASTER CARDS, WITH SILK FRINGES.—We would call especial attention to these, as they will doubtless prove very attractive. These goods are made up with the best quality heavy silk fringe, made expressly for us. All fringed Easter Cards are furnished with Protectors and Envelopes, and are put up with assorted colors of fringes.

LIST OF PRANG'S EASTER CARDS FOR 1881.

No. of Series.	No. of Designs.	DESCRIPTION.	HOW PUT UP.	Retail Price per Set.

BOSTON, MASS.

Trade Novelties.

[We will be glad to receive samples of all novelties issued in the trade, and will notice all such which possess merit free of charge. It is desirable to accompany descriptions with cuts whenever possible.]

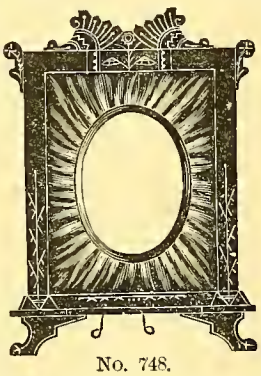
NEW PHOTO FRAMES.

Among the latest introductions in frames are the articles represented by the accompanying illustrations. No. 857 is a Grecian corner velvet passe-partout, with brocaded satin on sides and top and having satin puffing and a velvet centre. Nos. 748 and 749 represent ebony frames engraved in white and gold, and fitted with satin mats and nickel rims. They are suitable for the imperial photograph.

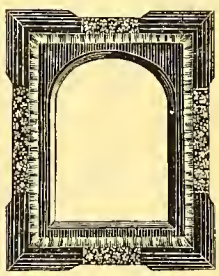
NEW PATENTS.

No. 237,612. Apparatus for and Method of Chromatic Printing.—Gustav Schwarzwald, New York, N. Y., assignor to the Polychromatic Printing Company, same place.

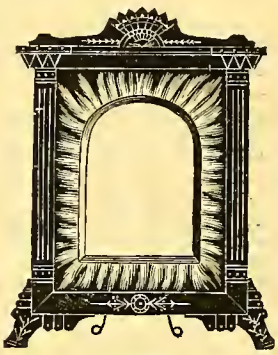
1. In an apparatus for producing polychromatic prints, the combination, with a reciprocating platen carriage having an interchangeable pattern frame, of a vertically movable color distributor, and of means whereby the colors are evenly distributed on the sheets after the colors have been deposited. 2. In an apparatus for producing polychromatic prints, a color distributor consisting of perforated shelves and of a series of color tubes supported thereon. 3. The method of producing polychromatic prints, consisting in laying an adhesive covering over the surface to be covered, then depositing small quantities of finely pulverized colors on the so covered surface, and, lastly, distributing the colors evenly over the adhesive surface. 4. In an apparatus for producing polychromatic prints, the combination, with a reciprocating carriage, of a pattern frame, a vertically guided color distributor, and mechanism for raising and lowering the same.



No. 748.



No. 857.



No. 749.

No. 237,620. Hand Stamp.—Henry P. Smith, Syracuse, N. Y.

No. 237,645. Hanging Up and Carrying Off Machine for wall paper manufacturers' use.—John Waldron, New Brunswick, N. J.

No. 237,647. Machine for Cutting Indices.—William E. Waters, Orange, N. J.

1. In an index-cutting machine, the combination, with the reciprocating knife and its actuating mechanism, of a horizontally traveling book carriage, a rack bar connected with the carriage, a pivoted oscillating lever provided with two pawls arranged to engage the rack bar, and intermediate connecting devices between the oscillating lever and the knife-actuating mechanism. 2. In an index-cutting machine, the combination, with a book carriage and a weight or spring acting thereon, of a horizontally traveling rack bar connected with the book carriage, a longitudinal oscillating lever arranged parallel to the rack bar and provided with two pivoted pawls for engaging with the rack bar, a link attached to the oscillating lever, and a pivoted lever connected with the link and arranged to be operated by the mechanism which actuates the cutting knife.

No. 237,705. Toy Horse and other Toy Quadrupeds.—Thomas L. Sancomb, South Bend, Ind., assignor of one-half to Alexis Coquillard, same place.

No. 237,706. Manufacture of Printers' Metal Furniture.—George Scott, New York, N. Y., assignor of one-half to J. L. Chapin and one-fourth to Mary E. Powers, both of same place.

No. 237,744. Spring Clasp.—Theodore M. Hass, New York, N. Y.

No. 237,746. Safety Paper for Checks, &c.—John Hendricks, Brooklyn, N. Y.

1. A double safety paper having a safety tint embodied into the paper and an auxiliary surface tint of a fatty ink printed thereon, both the paper and surface tints containing bichromate of potash. 2. A double safety paper having a safety tint embodied into the paper, and prepared of a vegetable dye or dyes and bichromate of potash, and having an auxiliary surface tint of a fatty ink prepared of pigments, bichromate of potash and linseed oil varnish. 3. A safety paper the body of which has a safety tint consisting of an aqueous solution of a vegetable dye or dyes and bichromate of potash.

No. 237,749. Hanging Wall Paper.—Alexander Johnson, New York, N. Y.

No. 237,757. Toy Safe.—Louis Kyser, Alfred C. Rex and Rudolph M. Hunter, Philadelphia, Pa.

No. 237,781. Scissors.—John L. Starks, Sharon Grove, Ky.

No. 237,818. Engraving and Chasing Machine.—Charles Chevalier, Brooklyn, N. Y.

No. 237,825. Calendar.—John Cussons, Glen Allen, Va.

A tablet calendar composed of a backing card or board, and a tear-off calendar tablet composed of leaves sewed together, the back leaf being formed of a material superior in strength to or capable of resisting a greater tearing strain than the others, and cemented or pasted to the backing card or board.

No. 237,840. Machine for Backing Books.—William F. Ellis, New York, N. Y.

No. 237,890. Elastic Band Fastening for Pocketbooks.—John Menahan, New York, N. Y.

No. 237,897. Toy Dolls.—Charles Pfanne, Washington, D. C.

No. 237,916. Picture Cord Attachment.—Chas. A. Simpson, Saxonville, Mass.

No. 237,919. Easel.—Albert H. Soukup, Chicago, Ill., assignor of one-third to Isidor Soukup, same place.

No. 237,954. Temporary Binder.—Thomas H. Brown, Jr., Chicago, Ill., assignor to Stephen Clary, same place.

No. 237,955. Temporary Binder.—Thomas H. Brown, Jr., Chicago, Ill., assignor to Stephen Clary, same place.

No. 237,966. Process of Stitching and Tying Pamphlets and Papers.—Sterling Elliott, Boston, Mass.

A process of stitching and tying pamphlets, &c., which consists in drawing through the material a series of loops, doubling the first upon itself, then passing the end of thread, which is the last loop, through all the other loops, thus forming the stitches and knot at one operation.

No. 237,969. Machine for Drying Printed, Varnished, or Gummed Sheets.—Louis A. Fernow, Chicago, Ill.

The paper is suspended from wires, each of which is held between two carriages running on endless ways which extend horizontally and vertically on opposite sides of the drying chamber. Suitable mechanism is provided for imparting a fast rate of speed to the carriages while moving along the vertical portion of the ways and a slow rate when moving horizontally.

No. 237,975. Buffer Spring for Printing Machines.—Jno. T. Hawkins, Taunton, Mass., assignor of two-thirds to John L. Brower, New York, N. Y., and Alex. F. Brown, Montclair, N. J.

1. In combination with the reciprocating bed of a printing press, a series of buffer springs attached at one end to a pivotal centre of oscillation, and at the other end adjustably upon or within an arc or curved slot of a rocking lever, whereby the reaction of the springs is varied proportionately to the speed and momentum of the bed without changing the initial compressive set or tension of the springs. 2. In combination with the reciprocating bed of a printing press, a set of buffer springs adjustably connected to a rocking lever and provided with a pivotal rod having thereon a stop, whereby the inward motion of the lever is limited, while leaving it free from pressure for the purpose of adjustment. 3. In combination with the reciprocating bed of printing press and buffer springs, a rocking lever provided with an adjusting arc, whereby, while the initial compressive set or tension of the springs is preserved constant, their reaction is increased or diminished for varying speeds of the bed by their varied adjustment within or upon the arc.

No. 238,023. Combined Scissors and Pencil Holder.—Carl Bramberg, Brooklyn, N. Y.

No. 238,024. Stylographic Fountain Pen.—Francis C. Brown and Alexander M. Sutherland, New York, N. Y.

No. 238,117. Combined Pen Rack and Letter Holder,—Seth Hillman, Blackwoodtown, N. J.

No. 238,120. Making Pails from Paper.—Eber Hubbard, St. Joseph, Mich.

No. 238,125. Paper Cutting Machine.—John M. Jones, Palmyra, N. Y.

No. 238,180. Toy or Puzzle.—Walter Stranders, New York, N. Y., assignor to the Enoch Morgan's Sons Company, same place.

No. 238,198. Machine for Wiring Paper into Bunches.—Joseph L. Odell, Gilford, N. H., administrator de bonis non, successor to Marcia B. Wardwell, administratrix of Charles P. S. Wardwell, deceased.

REISSUES.

No. 9,579. Time Globe.—L. Paul Juvet, Glens Falls, N. Y. Original No., 64,989, dated May 21, 1867.

TRADE MARKS.

No. 8,156. Writing Paper of all kinds.—Z. Crane, Jr., & Brother, Dalton, Mass.

"The device or picture of a spinning wheel."

Pay a decent respect to the opinions of the world; but despise and reject its false conventionalisms.

OLD BERKSHIRE MILLS

DALTON, MASS., U. S. A.

One party writes: 'The two hundred RECORD BOOKS, for 83 of the 99 Counties, now on exhibition at the Iowa State Fair, at Des Moines; and all, but four (!) of them, made from your 'OLD BERKSHIRE MILLS LINEN LEDGER,' Medium, 40lb., make a splendid show."

[The above cut is a fac-simile of the wrapper used on the Linen Ledger Paper.]

We will pay for any book rejected on account of fault in the paper. Send for Samples, test them in comparison, and see that your books are made from paper thus water-marked.

OLD BERKSHIRE MILLS

LINEN LEDGER PAPER

Will stand the severest test of COLOR, CLIMATE, INK OR WEAR.

Being **Triple Sized** (a process entirely our own) and **Loft Dried**, can be erased and written upon the fifth time distinctly. None genuine without the water-mark and date, thus—**Old Berkshire Mills Linen Ledger, 1881.**

P. O. Box 1337. Z. DELANO, Boston, Mass.

IF YOU WANT THE BEST STYLOGRAPHIC PEN,

The Latest and the Best

Circulars on application.

Examination Solicited and Satisfaction Guaranteed.

The attention of the Trade is called to the improvements made and advantages offered in Livermore's New Stylographic Pen.

Patented July 15, 1879, and March 9, 1880.

FIRST—**A Smaller Air Tube**, allowing more space for the ink, and rendering the operation of filling easier and less frequent.

SECOND—**The Manner of Fastening the Needle**, not to the air tube, where it would be in danger of being bent or injured every time the pen was filled, but in the point, where it is not so exposed.

THIRD—**The Protection of the Spring** by a silver casing, preventing the ink from clogging its action.

FOURTH—**The Duplex Interchangeable Point Section**, furnishing great facility in cleaning the pen.

FIFTH—**The Ease with which Repairs can be Made.** The needle being in the point, it is not necessary to send the whole pen to the factory, but any dealer can supply a new point.

SIXTH—**Freedom from Legal Difficulties.** The New Stylographic Pen is manufactured under the patent controlling the use of an air tube in a Fountain Pen, and it is therefore free from legal complications.

Trade Gossip.

All new goods and designs which are not, strictly speaking, "Novelties" will be noticed under this head. The trade are requested to forward descriptions with samples in order to secure proper notice.

R. O. Paul, printer, Augusta, Ga., has sold out to J. S. Bean, Jr.

W. S. Sands, dealer in stationery, Toronto, Ont., Can., has sold out.

Fell & Cook, dealers in paper hangings, Wilkes-Barre, Pa., have sold out.

E. Warnock, fancy goods dealer, Goderich, Ont., Can., has been burned out.

Chas. H. Willingham, publisher of the *Reporter*, Brenham, Tex., has sold out.

The stock of Michael Hennessy, paper stock dealer, San Francisco, Cal., has been attached.

Mary Reardon, fancy goods dealer, Brooklyn, W. D., N. Y., has been closed out by the sheriff.

R. M. & J. P. Jaffray, printers and publishers, Brantford, Ont., Can., have dissolved partnership.

George A. Hanley, stationer, &c., Silver Cliff, Col., has been burned out. Loss, $300; no insurance.

Nelson, Fitch & Co., fancy goods dealers, Halifax, N. S., have dissolved partnership. Mr. Nelson continues.

Downey & Yeager, booksellers and stationers, Franklin, Ind., have dissolved partnership. Yeager & Brown succeed.

Rhodes & Allen, paper box manufacturers and printers, Kansas City, Mo., have dissolved partnership. S. L. C. Rhodes succeeds.

F. L. Ellis, who had been representing McLoughlin Brothers and other houses in the Australian colonies, has just returned, and reports great success in introducing American goods there.

The satin cards shown by Myers Brothers are certainly very neat, and are worthy of the attention of those members of the trade desiring this class of goods. They are intended either for Easter or birthday purposes, and would make suitable presents for a lady on any festive occasion.

Among the visiting members of the trade to the city during the week were Mr. Hanford, of Hanford & Waterman, Watertown, N. Y.; E. D. Dresser, of Winkley, Thorp & Dresser, Boston; Robert Amsley, Western News Company, Chicago, and Mr. Marsh, Detroit News Company, Detroit.

Hard & Parsons, 126 Duane street, New York, are now ready for business, and show an exceedingly fine line of stamped and illumiuated goods. Members of trade might find it to their advantage to call at the firm's warerooms and examine the elegant samples there on exhibition. The firm says that it will agreeably surprise the trade with the lines it will offer.

Hinds, Ketcham & Co., label printers, at 104 Fulton street, and successors to the late William Everdell's Sons, have recently erected a large building at 449 and 451 Water street, running through to South street, and have removed their manufactory thereto. They will continue their office for the reception of orders at their old location. Their establishment is lighted up with Edison's electric light. The facilities of this firm are asserted to be among the most extensive if not the largest in its line in New York.

R. Fideau, 16 Beekman street, on Tuesday, March 1, issued his new catalogue and price list of hammocks, tropical beds, improved cradles for babies, school bags, horse flynets, &c. All of these goods he has been manufacturing for a number of years, and their merits have become so well known to the trade that they require no special mention. A feature of his last catalogue is a reduction in the prices, which he is enabled to make by reason of greatly improved facilities for manufacture and an increased trade. The new styles of school bags which Mr. Fideau has been getting up will be ready about the middle of this month, and he says of these that they will be the best and cheapest cotton in the market. Prices and samples of these will be furnished free of charge on application to him.

Russell's blotting paper is put up full weight and count as marked, is remarkably thick for weight, is as perfect an absorbent as any other blotting, will not fuzz up in use, and leaves no list to clog the pen. The manufacturers say that it will outwear any other blotting, and that it is unsurpassed in all the requirements of a first-class blotting. At the same time the price is very low, much less than any other first-class article, and as low or lower than various cheap blottings on the market. Bulkley, Dunton & Co., 74 John street, this city, are the wholesale agents.

Chas. Beck, 609 Chestnut street, Philadelphia, is very busy getting out a large variety of handsome Easter cards. His fringed cards are said to be gems of art, put up in a very tasty manner, with post protector, and envelope ready for mailing. They are assorted in six colors of silk fringe, comprising twenty-three sets, each set containing four designs. Mr. Beck says that the list price ranges from $25 to $100 per 100, with liberal discount to the trade. More particular information can be obtained by writing direct to him.

A. M. Collins, Cope & Co. have just brought out another new set of advertising cards. The latest is known as No. 270, is in four designs, size 3x5 inches, representing musicians, trumpeter, accordeon player, organ grinder and bell ringer. They are designed by one of the most eminent American artists, and executed in ten colors. This firm says that a large portion of the first edition has already been sold, although only issued this week. They are sold at $6 per M.

The Philadelphia Novelty Company, manufacturer of the Novelty paper fastener, denies that it has infringed upon the patent of George W. McGill, and says that it will assume all liability for damages that may be claimed from persons selling its goods. Hasbrouck & Watson, the agents for the Novelty, say that they will guarantee to protect their customers.

T. S. White & Co. have opened a blank book, paper and stationery business at 71 E. Third street, St. Paul, Minn., and ask the trade to send them catalogues, price lists, &c.

There will be a meeting of the Straw Board Manufacturers' Association at the Grand Pacific Hotel, Chicago, on Wednesday next, March 9, at 10 A. M.

The stock of Hannah Davis, dealer in fancy goods, Montreal, P. Q., Can., has been damaged by water. Partly insured.

F. C. Marvin, representing the *Courier* Company, Buffalo, N. Y., was in town during the week.

Horatio N. Harbach, stationer, &c., Philadelphia, Pa., has made an assignment.

Dux & Kelsey, printers, New York city, have dissolved partnership.

Isaac P. Moore, printer, Kansas City, Mo., has sold out.

The Elberton Publishing Company, Elberton, Ga., is advertising to close out.

William Knapp, publisher of the *Tribune*, Chester, Ill., has sold out to James B. Matlock.

Paxton & McVey, booksellers and stationers, Charleston, Ill., have sold out to John W. True.

The Danville Post Company, publishers of the Danville (Ill.) *Post*, have sold out to T. B. Shoaff.

The style of H. L. Martin, publisher of the Bluffton *Banner*, Bluffton, Ind., is now Martin & Roth.

R. E. Kuhn & Co., booksellers and stationers, Shelby, Iowa, have sold out to Rummells & Marshall.

Andrews & Rogers, paper dealers, Atchinson, Kan., have dissolved partnership. R. S. Andrews continues.

McCarty & Hasberg say that the trade will find it advantageous to look carefully over their advertisement in another column.

A. Weidman & Co.'s new quarters at 306 Broadway are very capacious, and are elegantly fitted up. The firm will be pleased to see all of its friends at the new store.

Raymond Brothers, New York, have bought the entire edition of J. T. Headley's "Life of General Grant," and propose to offer the work to the trade at a great reduction.

The Parsons Paper Company, Holyoke, has issued a new sample book of tinted writing and envelope papers, for which this company has a high reputation. Samples will be sent on application.

One of our city houses which began the manufacture of cheap chromo advertising cards, ranging in prices at from $2 to $8 per M., about six months ago, has now an average sale for them of 100,000 daily.

Charles Cohen, Philadelphia, has been taking a much needed recreation at Atlantic City. The bracing sea air and entire rest have accomplished all that could be desired. Mr. Cohen will return to his many responsibilities with renewed vigor of mind and body.

The Elsey School Furniture Company, Springfield, Mass., manufactures the "Little Gem" slate and blackboard erasers and other articles for school and office supply. It has a new set of price lists, which will be useful to the trade. The slate cleaners are a recent introduction, likely to be in demand.

Houghton, Mifflin & Co., Boston, have issued a new catalogue of their publications. The catalogue is very full; it is handsomely printed and is embellished with numerous illustrations copied from those contained in their different publications. The work of the Riverside Press is a guaranty for the character of this catalogue.

C. M. Crandall & Co., Montrose, Susquehanna County, Pa., forward price lists and circulars of their specialties in blocks, toys and games. The fame of Crandall's blocks and toys is world-wide, and the trade should keep price lists of these goods always at hand. Orders for this firm's specialties should be addressed to the firm.

Charles S. Plummer returned home this week from a trip through New York State for Ph. Hake. Mr. Hake's Easter line is having a very large sale, as the goods are different from the general line of cheap publications. He is now at work getting up his fall line of goods: and, to accommodute his large and increasing trade, has leased the upper floors of No. 63 Ann street,

nearly opposite his present building, and will add it to his facilities for manufacturing on May 1.

F. O. Carnahan, of the firm of F. O. Carnahan & Co., printers, Cincinnati, Ohio, is dead.

J. F. Atkinson, publisher of the *Evening Chronicle*, Portland, Oregon, has suspended.

J. B. Lane, bookseller and stationer, Montreal, P. Q., Can., is advertised to be sold out on the 3d inst.

I. H. Hamburger shows an exceedingly pretty line of Easter cards, and has a great demand for them.

S. W. Smith, bookseller and publisher of the *Times*, Warsaw, Mo., has been burned out. No insurance.

Fuller, Upham & Co., printers, Providence, R. I., have dissolved partnership. W. Ward Fuller continues.

M. Rosenberg, wholesale dealer in fancy goods, New York city, has changed his style to M. Rosenberg & Co.

The *Commercial Reporter*, Portland, Oregon, has been attached, and is advertised to be sold out by the sheriff.

Mason & Erb, Dallas, Texas, ask booksellers, stationers, and notion jobbers to send them new catalogues and price lists.

Mr. Mackinlay, representing the firm of A. & W. Mackinlay, stationers, of Halifax, N. S., is in the city, with his wife, buying goods.

James E. Magee & Co., stationers, printers and blank book manufacturers, Philadelphia, Pa., are advertised to be sold out by the sheriff.

James Hennesey has bought out the paper stock business formerly carried on by E. W. Taylor, at Nos. 10 and 12 Reade street, New York.

The New Hampshire Register and Business Directory for 1881 is out, and can be had of the Claremont Stationery Company, Claremont, N. H.

John P. Charlton & Co., manufacturing stationers, Philadelphia, Pa., have dissolved partnership. John P. Charlton will settle the business of the firm.

Brentano, New York, announces that he will start the publication of a chess magazine, to be edited by Henry C. Allen, and with A. P. Barnes, George E. Carpenter, and others, as contributors.

Thomas Nelson & Sons, New York, give notice that the New Testament of the uew revision of the Bible will be ready probably in May. As this will be the authorized edition, the trade will look out for it.

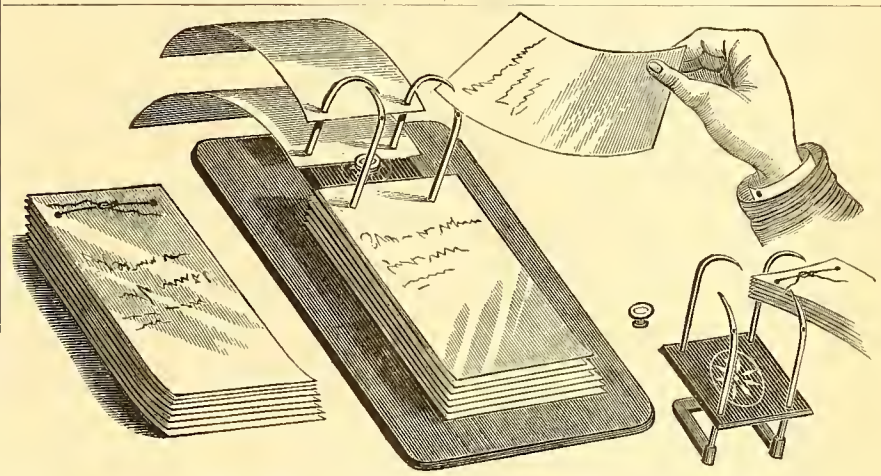
The Kaolatype Engraving Company is increasing its force to such an extent that it has been compelled to secure larger quarters to accommodate its business, and has taken a five years' lease of parts of several lofts at 104 Fulton street, and will remove thereto on or before May 1.

Samuel Hano & Co., Boston, are manufacturing manifold goods only, and thereby having superior advantages for supplying the trade. They use only high grades of tub-sized, loft-dried papers, of the finest English tissue, and Field & Tuer's clean, dry carbon. No noxious vapors are perceptible in either the manifold or carbon, and no blur is made. They make forty-two numbers, and assert that they have the finest goods, the lowest list and the largest discount. They are also sole manufacturers of the Hano patent order book. Price lists and discounts can be had by addressing the manufacturers, whose office is at 105 Summer street, and factory at 370 Atlantic avenue, Boston.

THE H. & W. FILE.

The Most Substantial, Simple and Convenient File Made.

A paper may be removed **MORE QUICKLY** than from any other File.
It need not be touched with the hands in order to file a paper!
It is **ALWAYS READY** for use.
It will accommodate 500 sheets.
It has **NO SPRINGS** to get out of order.
Its arms are **Solid Brass**, not tubes; therefore, stronger.
It has **NO MACHINERY** to work.
It requires no separating of parts; no "**Opening of Gates!**" no moving of anything up or down, sideways or otherwise, in order to file a paper!
It has **NO DETACHED APPARATUS** of any kind.
A paper **MAY BE READ ON ALL SIDES**, without removing from the File.



A paper may be **taken from or placed in any part of the File** without mutilation and without removing any other sheets.
A compact package may be made of its contents when full, and **removed all tied together.**
ANY BINDER may be used in connection with this File, as the package is in shape to go into any of the **BOXES** made for that purpose.
Its convenience is most appreciated in the using.
It will undoubtedly **OUTLAST ANY FILE MADE.**
It is made from the best **SEASONED WALNUT, HANDSOMELY FINISHED.**
It is richly mounted in **Brass**, and Japan Work.
It is made to Sell for its Merits.

PRICES.

THE STATIONER.

DEVOTED TO THE INTERESTS OF THE

Stationery and Fancy Goods Trades.

WEEKLY---$2.00 PER ANNUM.

Single Copies - - - - - 10 Cents

NEW YORK, THURSDAY, MARCH 3, 1881.

Advertisements cannot be received for insertion in the current week later than 12 M. on Wednesday. The charge for advertising is 25 cents a line, each insertion. Special terms for standing and displayed advertisements to be had on application.

This journal aims to be a medium of information for and a representative of the interests of every one connected with the stationery and fancy goods trades. It contains a full and trustworthy survey of the market for stationery in this country, in all cases giving the actual prices at which goods can be bought of importers and jobbers in this city, together with a detailed account of novelties in the trade, patents relating to stationery, and current items of interest. A review of foreign markets and accounts of movements abroad will also be furnished, and no pains will be spared to make THE STATIONER a thorough and complete exponent of the trade.

Subscription and postage for Great Britain, per annum..... 12s.

Any information our readers may wish to obtain shall be cheerfully given, and prompt replies will be made to all inquiries addressed to us on any subjects of interest to the trade.

Communications on all trade matters are earnestly solicited. Address

HOWARD LOCKWOOD, Pres. and Treas.
American Stationer Association,
74 DUANE STREET, NEW YORK.

Subscribers to THE STATIONER can be supplied with the best cloth binder in the market. Deliverable at the publication office. Price, fifty cents.

Readers of this paper who avail themselves of the information obtained from its columns, by advertisement or otherwise, are requested to notify their correspondents of the source of their information.

ONE of our correspondents tells us to push the Board of Trade. We have done considerable of this, and we would remind our friend that THE STATIONER is not a locomotive.

IT will take something startling to get the Board of Trade into an active frame of mind where general trade interests are to be cared for. It is doubtful if nitro-glycerine would do more than make a disagreeable sort of muss when some people are to be stirred up.

NOT that our Board of Trade can be affected by dynamite. The explosive would be too weak. It is the weight of business that would keep it down. The office of the Board is burdened with work; its tried clerks seem to be in the last stages of decline, and carking care beclouds the brow of the secretary. Were it not for the beneficent aid of the president and of the members of the different committees, who do so much to incite and encourage the subordinates to continue the writing up of doubtful concerns and notifying of business changes, the coroner would have to "sit upon" the overtasked employees *seriatim.* Some people may be unkind enough to wish that the public functionary mentioned would discharge his duty *literatim;* but we don't. We should be sorry if he did—on the coroner's account.

BUT, joking aside, the cry from the trade to the Board is, "Come and help us." The remark of our correspondent is not an isolated instance of opinion. We have it from various sources, and were we to print some of the complimentary allusions which come to our desk, we fancy that even the Board of Trade would wake to a grave sense of its responsibility and what is demanded of it. We remind our impatient friends that the New York stationers' organization, if the oldest and most prominent, is not the only one of its class, nor the beginning and ending of all effort for active work in matters of general interest. If the initiative cannot be taken here, we call upon the men of Chicago and St. Louis to display the enterprise for which they are famous, and show that they have associations which are broad, as well as special, in their action and endeavors.

SELLING goods at wholesale prices to consumers has not been stopped. A leading firm was lately taken to task by one of its customers for hurtmg his business by selling to his retail trade. We are very much disposed to put the name of the firm in print, just to see how it would look, and to get a decided, practical trade opinion of such a method of doing business. But, we forbear, as the firm says that it did it unknowingly. We are willing to credit it with righteous intent; but warn it that ignorance is no defence in law, although it may be sometimes accepted as a plea in mitigation. We question, however, the business exactness of a house which accepts the statement of any one who says that he is in the trade without inquiring into or reasonable excuse for belief in the truth of the statement. A house once known to sell against its trade is sure to find out that there is a reckoning to come, and however much it may affect to despise the result it is sure to protest against the charge and to make strong efforts to gather up and retain the trade which it finds beginning to turn away and slip from its control. Some people try to work the thing slyly, but we think are apt to get caught in the long run. Everybody who is careless in his dealings or indifferent to the demands of his business, will find that there is great need for strict attention to the just requirements of trade, and on those who sell to consumers at trade price we urge the precept—Don't do it.

ANSWERS TO CORRESPONDENTS.

R. & Co., Philadelphia, ask for (1) names of manufacturers of scrap hooks (excepting four or five houses specified), and (2) for address of party handling musical photo album.

Ans.—Henry Levy & Son make scrap books and import and sell the albums.

CHATTEL MORTGAGES.

[In the appended list R. signifies a renewal of a pre-existing mortgage; B. S., bill of sale; and Real, a mortgage on real estate.]

Among the visiting members of the trade in this city this week were L. G. Reynolds, of Reynolds & Reynolds, Dayton, Ohio; Marcus Colton, of Colton & Co., Minneapolis, Minn.; Robert Ansley, of the Western News Company, Chicago; Joseph Marsb, of the Detroit News Company; E. V. Skillman, Kalamazoo, Mich., and Mr. Mills, of Mills & Co., Denver, Col.

OBITUARY.

HIRAM WOODMAN.

Hiram Woodman, formerly an old paper maker and expert in its manufacture, and recently connected with the Metropolitan Printing Establishment, of this city, died at his residence in Harlem on Tuesday, after a brief illness. Mr. Woodman was a native of Woburn, Mass., and was about fifty-five years of age. He leaves a widow and several children.

INK FOR MARKING ZINC.—The following ingredients are said to form an indelible black ink for writing on zinc. Take 30 parts of verdigris, 30 of sal-ammoniac, 8 of lampblack, 8 of gum arabic, and one ounce of varnish of linseed oil, or ¾ of an ounce of Venice turpentine, which should be boiled together and stirred till the mixture is thoroughly incorporated.

George W. McGill announces his intention to take legal proceedings to stop the manufacture and sale of the Novelty paper fastener as being an infringement of his "patent single stroke staple press," for which Holmes, Booth & Hayden are licensees and agents. Mr. McGill's attorney has sent out a notice forbidding the sale of the "Novelty."

The Esterbrook Steel Pen Company has issued several advertising cards, which serve the double purpose of being useful and of advertising its business. These embrace three designs, two of which are the Falcon Match Scratcher and Reward of Merit card. They are highly colored and gilt, and represent a miniature "Brother Jonathan" holding a banner, the handle of which is a large steel pen, the banner itself having a small piece of sand-paper to scratch matches upon. The same design is used for the Reward of Merit card, except that the piece of sand-paper is not upon it, its place being occupied by the words "Reward of Merit." A third card is a humorous one, representing several pigs breaking out of a pen (a stye) and running off, with the inscription "No excuse for a bad pen, when all the stationers keep Esterbrook's steel pens."

John A. Lowell & Co., Boston, whose engraved cards are so widely known, are publishing a portfolio of four steel plate engravings, from designs prepared specially for the purpose. The engravings are in the highest style of the art and are very handsome. They are female figure designs in quaint, old-fashioned costumes, and are worth framing, if it is not desired to keep them in the portfolio. This first series will be followed by a series of etchings, which will be followed by others in due time. Mr. Lowell has also in hand a plate for a copy of Hunt's "Bathers," on which he has been at work for a year and a half. The printing of the engravings deserves mention, as the presswork is admirable. The portfolio is nicely bound in cloth, with beveled edges, and is stamped in gold and black. The series will be ready next week, and samples can be had, at the cost of $2, by addressing John A. Lowell & Co., 21 Exchange place, Boston, or M. A. Reay & Co., New York. Mr. Lowell is the originator of this class of engraved work. The designs are made expressly for him, and he owns all of the pictures from which the engravings are copied. His artists are sent out every summer to gather original sketches, and in this he secures a variety of subjects having a natural charm which fancy sketches rarely attain. It is worthy of remark that the most complimentary notices of his work have appeared in many of the foreign journals.

NEW POSTAL REGULATIONS.

Under the new order of the Postmaster General, revoking section 232 of the Postal Regulations, all partially written matter must be prepaid at the regular letter rate of 3 cents for each half ounce. A number of exceptions were made to the operation of this rule, but nothing was said about circulars made by the hektograph, the electric pen, &c. Inquiry at the Post Office elicits the information that the Postmaster General has made no rulings respecting this class of circulars, but that they are treated as third-class matter, if left unsealed and containing nothing of the nature of personal correspondence. Other exceptions to the new order are:

Corrected proof sheets and manuscript copy accompanying the same. Date and name of the addressee and of the sender of the circulars, and the correction of mere typographical errors therein. Upon third-class matter, or upon the wrapper inclosing the same, the sender may write his own name and address with the word "from" above and preceding the same, and in either case may make simple marks, intended to designate a word or passage of the text to which it is desired to call attention. There may be placed upon the cover or blank leaves of any book, or of any printed matter of the third class, a manuscript dedication or inscription, but it must be confined to a simple address or consignment as a mark of respect, and it must not partake of the nature of personal correspondence. Upon fourth-class matter the sender may write his own name and address, preceded by the word "from," and also the number and names of the articles inclosed. He may also mark the article for identification.

COLORED LIGHTS FOR PARLOR THEATRICALS.

It is often very difficult in the country, at a distance from cities, to produce satisfactory colored lights for amateur performances. W. K. Roy, of Wappinger's Falls, N. Y., in a communication to a contemporary, describes a convenient and ingenious apparatus for replacing calcium or electric light when such is not procurable. He says:

"Compelled to fall back on colored fires, I constructed a furnace of tin at small expense, that succeeded beyond expectation. A tin cylinder, 18 inches in diameter, was opened out at the side to admit a pane of glass, 16 by 24 inches. This glass, fastened securely in its place, constituted one side of the box; the curved inner surface of bright tin served as a reflector. A sheet iron bottom and an 8 inch heater pipe, leading from the top of the cylinder out through a convenient window into the open air, completed the apparatus. At the back of the box was constructed a sliding door, large enough to freely admit the hand, and closing tightly.

"The peculiarity of the apparatus was: 1. The large smoke pipe which was necessary to conduct rapidly away the large volume of smoke generated; and, 2. The box was made as nearly as possible air tight. The chlorate of potash furnished all the oxygen necessary for combustion, and all the air necessary for draught was admitted through the slide door, which could be closed quickly upon any indication of a back draught. The following formula for red fire gave the best results:

Powdered nitrate of strontia	8 ounces.
Powdered chlorate of potash	4 "
Shellac in coarse powder	2 "
Lycopodium	½ ounce.

"This mixture burns slowly, gives a good light, contains no sulphur, and can be prepared by any druggist. By placing the fire in tin troughs, 8 or 10 inches long, the amount of light and length of burning can be regulated to a nicety; and by alternating red, blue, aud green in the same trough these colors can be exhibited in any desired succession. In a furnace of this description I burned colored fires for an hour without the slightest disagreeable odor being perceptible in the room."

Market Review.

OFFICE OF THE AMERICAN STATIONER,
WEDNESDAY, March 2, 1881.

THE MONEY MARKET.—The money market early in the week was characterized by great stringency, the action of the banks in curtailing their circulation so limiting the amount of capital available for loans that it was impossible to obtain accommodation except at the most exorbitant rates. Loans were made as high as 1½ per cent. per diem in addition to legal interest. This, however, was an exceptional rate, but 1 per cent. was freely paid, and at one time ½ of 1 per cent. a day was considered cheap. When the effect of Secretary Sherman's measures for relief was experienced, the market assumed a tone of ease, and rates were again brought down to 5 and 6 per cent. At the close the quotation was 3@4 per cent. Loans were effected on United States bonds at 3@5 per cent. Time loans and prime discounts are without change. The government bond market was strong and ⅛@¼ per cent. higher for all the issues with the exception of 5s, which are unchanged. Railroad mortgages were in fair demand, but the market was irregular. The rates for foreign exchange were strong, and the tone of the market improved, and prices in instances higher at the close. The closing posted rates for prime bankers' sterling were 4.80½ and 4.83. The actual rates were up to 4.79¾@4.80¼ and 4.82@4.82½. Cables closed at 4.82¼@4.83, and prime commercial 4.77@4.78.

THE PAPER MARKET.—The general movement of paper continues remarkably good for the time of year; and although the mills now have an ample supply of water, the drought of last year was of such long duration that its effect is still felt in the reduced supply in the market, and will continue to exert an influence in sustaining values for some time to come. The prospect is promising for a good, healthy trade all through the spring, until the dull months of the summer are reached. This may not occur without some reaction in prices; but buyers may feel assured that, with the present output of the mills, and the difficulty they have in filling orders, there is little likelihood of any lower prices for at least two months to come, as a great many mills already have orders to keep them actively at work for that length of time. The most scarcity is seen in book and news, and in the former the demand at present may be said to run very closely on to the supply. We quote super-sized and calendered book, 10@10½c.; extra machine finished, 9@9½c., and low grade machine finished, 8½@9c. For news we quote No. 1, 8c.; rag and wood, 7@7½c., and straw, 7¼@7¾c., in store lots. Fine writings, while they show only moderate movement, hold their own fairly, and prices rule very regularly. We quote: Superfine flat caps, 18@19c.; fines, do., 15@18c., and engine-sized, 11½@15½c. Manilla wrappings continue active, and good prices are obtained. Binders' boards are moving slowly, but prices are steady. Straw wrappings are moderately active, and light-weight paper is scarce. The Straw Board Manufacturers' Association meet at the Grand Pacific Hotel, Chicago, on next Wednesday.

THE STATIONERY MARKET.—The disagreeable weather during the past week has been a drawback to trade, as country buyers have deferred coming to the city to make their regular spring purchases until the weather becomes more settled, which, when it does, cannot fail to give a decided impulse to business. Notwithstanding the small number of buyers here, there is a very fair business doing through the medium of orders sent in by mail direct and through traveling salesmen, and we hear of one instance where a salesman has returned home, in order to give his house an opportunity to catch up with orders already sent in, before he goes out again. The business in Easter goods continues on a very large scale, and fancy goods houses report considerable doing in fans and children's dolls. The trade throughout report a large excess of business during the first two months of this year, as compared with the same time last year. No changes in prices of staples are reported.

PROOF READING.

There are few of those not practically engaged in printing who comprehend the enormous difficulties in the way of producing a single page typographically correct. Leaving out of consideration the variations from rules of capitalization and punctuation, to which there are as many exceptions as there are to any of the so-called "rules" of English orthography, the labor of weeding out literal errors is one which taxes the patience and assiduity of the reader to the utmost. Errors which may strike the casual reader as so plain and easily discernible as to raise a conclusive presumption of carelessness, may have passed half a dozen careful readings unnoticed.

Many suppose that these errors might have been avoided, in the first instance, by due care on the part of the printer. This, to a certain extent, is true, but not to the extent supposed. It might be proper to charge him with all these errors if he had nothing else to consider in performing his work but correct composition. But there is a certain demand made upon him for quantity as well as quality. In order to render his labor remunerative, it is necessary that he should set during the working hours of the day a sufficient amount to entitle him to a living compensation, according to the standard by which the reading public are willing to pay. This he cannot do if he devotes his entire attention to literal accuracy.

When even a careless reader, who is sufficiently well informed to enable him to detect errors, devotes an hour to the conning of a single page, with a mind fresh and unclouded by other cares, he may discover errors which the proof reader has overlooked. But the professional reader brings to the daily discharge of his exacting duties a constitution similar to that of those engaged in other vocations. He, like everyone else, is subject to the ills that unfit him for close application and careful discrimination. The most competent have days when their minds are distracted by anxieties that draw their attention from the work in hand, which they necessarily perform in a perfunctory manner. The very continuity of this peculiar labor by which their faculties become habituated and their eyes expert to detect errors, has the effect, by the intellectual drudgery, to blunt their interest and tire their minds. So that the verdict should often be, instead of *careless* proof readers, *over-worked* proof readers.

There is probably not a periodical publication in this, or any other country, which is entirely free from error. To illustrate the difficulty, the following example is offered :

The superintendent of one of our leading railroads employed an expert to prepare a table of rates for freight between the different stations on a single line of road running through one State. Bent upon having this absolutely correct, he had it examined and re-examined, until no error could be discovered. The calculations were all simple. After the table was prepared in manuscript, it was printed and then submitted to expert proof readers. All the operations were gone over and proved. The cost of preparing this table was $10,000. When it was completed and pronounced perfect by several readers, it was subjected to the test of a calculating machine which could not err, and in less than half an hour an error was detected. Two or three hours' work with the machine discovered upwards of thirty mistakes in calculation, either of which was clearly apparent to any one acquainted with the simple rules of arithmetic, the moment his attention was directed to the

single calculation, unbiased by any preconceived notions of its correctness or incorrectness.

This merely goes to prove the fallibility of the mental mechanism to which we are compelled to submit all printed matter for final judgment upon its accuracy. When some one can invent a proof reading machine, we may arrive at absolute perfection, but not till then. The most that can be hoped for, with the means at hand, is approximate accuracy.—*Ex.*

FLOCK OR VELVET PRINTING.

This branch of printing is chiefly used for showcards. It is very simple, yet produces excellent effects.

Flock is finely powdered wool, the darker shades being generally made from old woolen rags, and colored in every imaginable shade. The colors are very bright, and when worked in combination with colored inks, bronze, &c., some beautiful effects can be obtained at very slight expense.

This class of printing is best done from engraved blocks showing a dark background, with the letters cut out, but is also adapted to type printing, care being taken to have no small letters in the form, as the flock sizing, being heavy and extremely hard to distribute, has a tendency to fill up fine lines or cuts.

If the size, when taken from the can, is too heavy, reduce with Damar varnish, which will thin the body of the size without destroying its adhesive qualities. Prepare the size in small quantities, as it is needed, or it will become dry faster than it can be worked up; and in all cases when a size is being used be careful to use a roller that has a hard, dry face. Never dampen he roller just before putting it to the size. The roller should be cleaned at least once an hour during the time it is in use, and always as soon as the job is finished—the best wash for the purpose being spirits of turpentine, finishing up with a sponge damped with clean water. The form will also be much benefited by an occasional cleaning.

Provide, say, a quarter of a pound of each of the following colors of flock: Light blue, light green, crimson or scarlet red, purple and yellow; a pound of flock sizing; a half pound of isinglass or frosting; some bronze, and a few ounces each of the following dry powders—ultramarine blue, Paris green, and a good vermilion. All of the above articles, with the exception of the size, may be had from the oil shops or drysalters, and the size is manufactured by ink makers. As jobs of this nature are generally done in small numbers, it is best to print them on a press.

After the form has been prepared, mix the size to suit, roll, and take the impression the same as if for a job to be done in bronze. If bronze is to be used at the foot of the lines, with a camel's hair brush apply that first; then with the fingers throw on such color or colors of the flock as may be desired. Take the card into the tips of the fingers, and bounce it until the flock has spread all over the impression, and then shake off the surplus powder into a box, or on a sheet of paper provided for the purpose, and the job is done.

If the frosting is to be used, let it be beaten up as fine as possible, throw it into the impression before the flock is used, and shake the surplus powder off. This will show a frosted appearance through the flock, and is very beautiful.

When the dry powder is to be used it must be applied with a brush the same as the bronze, and when all four of the articles are to be used in the same impression they should be applied in the following order—first the bronze, second the dry powder, third the frosting, and last the flock. The surplus powder thrown off can be worked up on an occasional card, to prevent waste.

By a little practice the printer will be enabled, with the above directions, to produce some very desirable effects, and can, with very little expense over and above one color printing, give as many colors as he pleases from one impression.

When flock jobs are done in large quantities, and for such classes of goods as are liable to be roughly handled, the impressions are calendered after the flock has been applied, but for jobs that are to be hung up and not hardly used it is not necessary.—*Printers' Register.*

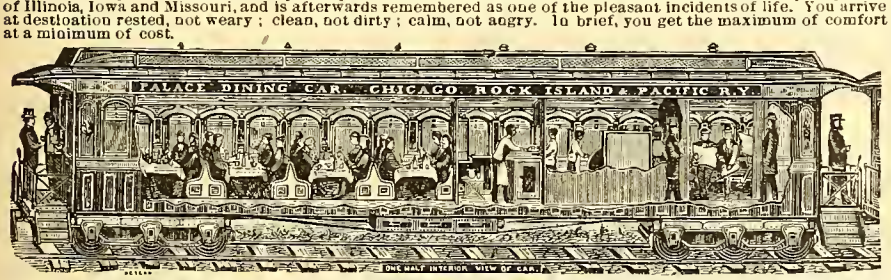
"THE GREAT ROCK ISLAND ROUTE"

Calls your attention to the following REASONS WHY, if about to make a Journey to the GREAT WEST, you should travel over it:

As nearly absolute safety as is possible to be attained. Sure connections in UNION DEPOTS, at all important points. No change of cars between CHICAGO, KANSAS CITY, LEAVENWORTH, ATCHISON or COUNCIL BLUFFS. Quick journeys because carried on Fast Express Trains. Day cars that are not only artistically decorated, but furnished with seats that admit of ease and comfort. Sleeping cars that permit quiet rest in home-like beds. Dining cars that are used only for eating purposes, and in which the best of meals are served for the reasonable sum of seventy-five cents each. A journey that furnishes the finest views of the fertile farms and pretty cities of Illinois, Iowa and Missouri, and is afterwards remembered as one of the pleasant incidents of life. You arrive at destination rested, not weary; clean, not dirty; calm, not angry. In brief, you get the maximum of comfort at a minimum of cost.



That the unremitting care of the Chicago, Rock Island & Pacific Railway for the comfort of its patrons is appreciated, is attested by its constantly increasing business, and the fact that it is the favorite route with delegates and visitors to the great assemblages, political, religious, educational and benevolent, that assemble from time to time in the great cities of the United States, as well as tourists who seek the pleasantest lines of travel while *en route* to behold the wonderful scenes of Colorado, the Yellowstone and Yosemite. To accommodate those who desire to visit Colorado for health, pleasure or business, in the most auspicious time of the year, the Summer season and months of September and October, the Company every year puts on sale, May 1st, at all coupon ticket offices in the United States and Canadas, round trip tickets to

DENVER, COLORADO SPRINGS AND PUEBLO,

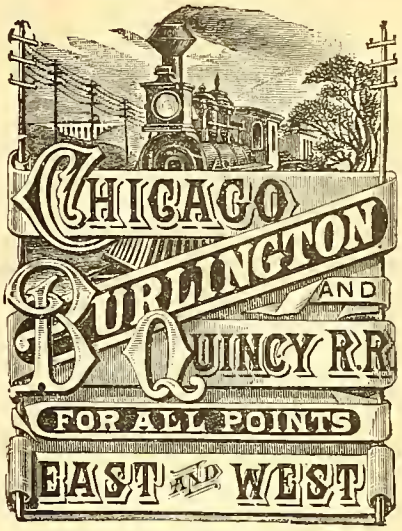
At reduced rates, good returning, until October 31st. Also to San Francisco, for parties of ten or more, good for ninety days, at great reduction from regular fares.

REMEMBER, this is the most direct route for all points WEST and SOUTHWEST. For further information, time-tables, maps or folders, call upon or address

R. R. CABLE,
Vice-Pres't and Gen'l Man'gr, Chicago.

E. ST. JOHN,
Gen'l Ticket and Pass'r Agent, Chicago.

TAKE THE



THE GREAT

BURLINGTON ROUTE.

☞No other line runs Three Through Passenger Trains Daily between Chicago, Des Moines, Council Bluffs, Omaha, Lincoln, St. Joseph, Atchison, Topeka and Kansas City. Direct connections for all points in Kansas, Nebraska, Colorado, Wyoming, Montana, Nevada, New Mexico, Arizona, Idaho, Oregon and California.

The Shortest, Speediest and Most Comfortable Route via Hannibal to Fort Scott, Denison, Dallas, Houston, Austin, San Antonio, Galveston and all points in Texas.

The unequaled inducements offered by this Line to Travelers and Tourists, are as follows: The celebrated Pullman (16-wheel) Palace Sleeping Cars, run only on this Line, C., B. & Q. Palace Drawing-Room Cars, with Horton's Reclining Chairs. No extra charge for Seats in Reclining Chairs. The famous C., B. & Q. Palace Dining Cars. Gorgeous Smoking Cars fitted with Elegant High-Backed Rattan Revolving Chairs for the exclusive use of first-class passengers.

Steel Track and Superior Equipment, combined with their Great Through Car Arrangement, makes this, above all others, the favorite Route to the South, South-West, and the Far West.

Try it, and you will find traveling a luxury instead of a discomfort.

Through Tickets via this Celebrated Line for sale at all offices in the United States and Canada.

All information about Rates of Fare, Sleeping Car Accommodations, Time Tables, &c., will be cheerfully given by applying to

CHROMO WORK.

GELATINE ON PRINTED CARDS.

Show cards in gold and colors are frequently much improved by being gelatined, a very simple operation, which is usually performed in the printer's warehouse.

Procure several tablets of flatted ground glass, cased in wooden frames. A rack should be set up to contain these tablets, which should each have a distinctive number and an allotted place in the rack. The manipulation of the process should be in a room where little or no dust is made. The framed rack should be built with three inch strips of wood, like a drying-rack for gumming envelopes, the back part fastened to a smooth wall and the under part or bottom covered with pasteboard. The different compartments in the rack must be made exactly level; and it is best to have them leveled with a spirit level, so that the requisite horizontal position of the glass tablets should be exact, without having recourse to packing up. If this is not done the covering of the fluid material will not be altogether equal.

The gelatine itself, which is a white glue obtained from bones, as well as the offal of tanners, is obtained in weak, nearly opaque cakes. The Chinese gelatine, which is obtained in the form of folded tubes, and is of a very white, light substance, of vegetable origin, can only be dissolved in boiling water. Ordinary gelatine is thus treated—it is first broken up into small pieces, then put into a clean linen cloth, and suspended (still in the cloth) in a basin of water, which is put in an open crucible, and then submitted to the heat of a spirit lamp, by which the gelatine is dissolved by the boiling water and the impure parts remain in the cloth. The quantity of water and gelatine should give a light, easy fluid, to which then an equal part of spirits of wine is added, as without this addition the fluid poured on the glass tablet would soon get cold, and spread unequally, while by means of these spirits of wine it levels equally and easily The most suitable mixture for this is, gelatine two parts, water five parts, spirits of wine three parts. But the vessel containing this fluid, after the addition of the spirits of wine, should be covered up, in order that it may not evaporate. It is also necessary that a glass vessel, provided with a measuring scale, such as chemists have, should be used, so that you may be enabled to judge how much of this fluid gelatine is necessary for a tablet in order not to get too weak or too strong a cover. Before the pouring out, the glass tablet should have a slight coating of oil on the surface, to prevent the sticking of the gelatine to the tablet.

The subsequent manipulation consists of the following: After the requisite quantity of gelatine has been poured into the graduated glass, it is poured on the slightly oiled glass tablet in a semi-warm state, whence it assumes a syrup-like consistency, and then the tablet is moved gently to and fro until all parts of it are covered by the gelatine fluid, when it is put in its place on the rack, and then, in a similar manner, all the other tablets are regularly treated.

After a quarter of an hour, when all the fluid mass on the glass tablet begins to get consistent, the picture or ticket which is to be gelatined should be moistened with water on its back with a sponge and put on the gelatine. Any air bubbles which may arise in covering should be pressed out with the hand toward the edges, and care should be taken that the edges of the picture adhere well.

In this state the sheets should remain from two to three days, lying on the rack until they are completely dry, when, with a blunted or dull knife, the surplus gelatine at the edges is cut away, and the card which now adheres fast to the gelatine is taken off the glass tablet.

It should be understood that the frame and glass of the used tablets must be carefully cleaned from the adhering gelatine before they are used again—*Printers' Register.*

INK FOR RUBBER STAMPS.

In the preparation of ink for rubber stamps, the objects to be attained are: That the ink shall be of good color, not dry very readily on the pad, and yet be capable of becoming readily absorbed or of drying on the paper, so as not to smear when used.

Color is a matter of choice; violet was at one time popular, and is the most intense and cheapest. Black always looks well, so does crimson or scarlet, if used with a small neat stamp; but blue, green, lavender, &c., may all be produced by the following simple formula:

Solid aniline dye (black, scarlet or blue)...ounces.	½
Boiling distilled water.... ..... "	2½
Glycerine..... .....drachms.	3½
Treacle..... "	1½

Dissolve the dye in the boiling water, then add the other ingredients, and when cold it is ready for use.

The only peculiarity in the above formula is that it contains treacle, which gives a character to the ink not readily attained by other means. If violet, dry "Violet de Paris" is used—from 80 to 90 grains will be sufficient for the quantity of liquid. To insure a bright impression the pad should be kept clean and free from dust, a point which probably too often escapes attention.

☞ No moisture required.

THE OLD "BERKSHIRE MILL."

The "old Berkshire mill" is the first paper mill that was established in Massachusetts, or indeed within the prolongation of the lines of its territory, westward from the Connecticut River. The United States Census Bureau, prosecuting its work of the Census of 1880 has brought out many historical facts, and among them, perhaps, none more interesting to the paper trade than the account of the beginning of the first paper mill in Western Massachusetts and of Zenas Crane, the pioneer paper maker, who built it.

The "old Berkshire mill" is now owned by the Carson & Brown Company, of which Charles O. Brown is president. Mr. Brown prepared a history of this mill for the Census Bureau, which the Pittsfield *Sun* has printed. It is noteworthy also that the same paper, eighty years ago, printed the advertisement which is copied below.

Following is the account of the origin of the

"OLD BERKSHIRE MILL."

In the history of nations, or the world, one hundred years is but a short time, and since the history of this mill marks almost one-sixth of the time elapsed since the discovery of the art of paper making; the record, in reality, begins in the "day of small things" of this now vast and important industry of our country.

Zenas Crane rode on horseback prospecting in Western Massachusetts in 1799, and subsequently in 1801 located, and with others built, at Dalton, Mass., the first paper mill west of the Connecticut River—as shown by the following advertisement appearing in the Pittsfield *Sun* (a newspaper published in the neighboring town of Pittsfield):

AMERICANS!
Encourage your own Manufactories,
and they will Improve.
Ladies, save your RAGS.

AS the Subscribers have it in contemplation to erect a PAPER MILL in Dalton, the ensuing Spring, and the business being very beneficial to the community at large, they flatter themselves that they shall meet with due encouragement. And that every woman, who has the good of her country and the interests of her own family at heart, will patronize them by saving her rags, and sending them to their manufactory, or to the nearest storekeeper, for which the subscribers will give a generons price.

HENRY WISWELL,
ZENAS CRANE,
JOHN WILLARD.

WORCESTER, February 8, 1801.

and by deed given by "Martin Chamberlin" under date of "December 25, 1801," to "Henry Wiswell, Zenas Crane and Daniel Gilbert," in the following language:

A piece of land lying in said Dalton, being a part of lot number seventy-seven, described as follows (leaving out the boundary lines) Containing fourteen acres and one hundred and forty-nine rods of land, to gether with a paper mill and its appendages thereon standing. The consideration for the same was the sum of one hundred and ninety-four ($194) dollars.

It appears to be and was a fact, Martin Chamberlin had so much doubt about the practicability, or possibility, of establishing a paper mill, he only gave verbal permit "to build it and try," and gave a deed after "the thing was done" for the land, "together with a paper mill and its appendages thereon standing."

The Indians, at the close of the last century, had their huts near where the paper mill was located, and their wild "whoops" gave place to the "rattle" of the then rude machinery. These parties, Wiswell, Crane and Gilbert owned the mill—a "one vat mill"—till "May 12th, 1807.' The capacity of a "one vat mill" or "day's work" was 20 "posts," containing 125 sheets of paper each—"folio" or "cap" size—making 100 to 120 lbs. of paper, and required an "engineer," "vatman," "coucher" and "lahoy," the first receiving $3 per week; the next two "skilled workmen" commanding $3.50 per week and board themselves: while the "laboy" received 60 cents per week and board. It required one other man, two girls at 75 cents per week each, and board, and Mr. Crane, to manage the mill and business, which he did for six years, when he sold his "undivided third part" to Henry Wiswell, Wiswell and Gilbert continuing, and himself embarked in the mercantile business in the eastern part of the town. Henry Wiswell secured the payment to Mr. Crane by mortgage. Becoming involved, and in an unsuccessful business, the property was sold on execution. We have not space to note the frequent changes in the ownership, but while it was in the hands of David Campbell and Daniel Boardman, under date of "September 3d, 1812," a contract for "conducting" the mill was made in the following words:

"Provided, nevertheless, that if one Henry Wiswell, of said Dalton, do faithfully perform a certain covenant contracted in deeds of indenture made and executed between the said David and Daniel of the first part and the said Henry of the second part at Dalton this day, respecting the conducting of a paper mill, known by the name of the Old Paper Mill in Dal ton, the words of which particular covenant are as follows, to wit: And lastly, the said Henry covenants with the said David and Daniel, in consideration of the foregoing covenant and in consideration that he is to receive for the services he is to render as the foreman of the said mill at the rate of eight dollars for each and every week he is employed as foreman and no more. That he will so conduct the business of the said mill, as the agent or foreman of the said David and Daniel, that the mill shall yield to the said David and Daniel so much manufactured stock and other materials, from time to time, as will be equal, upon a fair appraisement, to a clear neat profit, over and above the capital employed, of eighty dollars and thirty-three cents for each and every month the said Henry shall be foreman of the mill. And if the said David and Daniel keep the said mill in good repair at all times, and the said Henry does not so conduct the business that it may produce the said profit, he covenants to forfeit to David and Daniel, and promises to pay them on demand, such a sum of money as shall equal the sum in which the profits of the mill may at any time fall short of the said profit, then this deed shall be void, otherwise to remain in full force."

The above quoted "deed" was signed, sealed and delivered in presence of two witnesses.

David Carson came to town in the summer of 1809, working during the month of August as "journeyman" for Wiswell & Gilbert. About this time Joseph Chamberlin built the "new mill"—so called—and the firm of Carson & Chamberlin was formed and started it; but David Carson, Joseph Chamberlin, 2d, and Henry Wiswell bought thirteen acres and seventy-two rods of land of Martin Chamberlin, on which was situated the "new mill," and continued to run the same till "April 6th, 1810," when David Carson sold the "undivided third part of the 'new paper mill,' so called," to Zenas Crane. Under date of "October 12th, 1812," David Carson bought the "undivided third part of the 'old paper mill,' so called, and the other buildiugs there being, aud the apparatus and furniture thereto belonging" of Daniel Gilbert; and in 1816 Mr. Carson became sole proprietor of the "Old Berkshire Mill" and it remained in his own and sons', Thomas G. and William W.'s, possession till April 1st, 1867, when it was sold to Charles O. Brown, George T. Plunkett, and Lewis J. Powers. A few years worked many changes in the ownership; Thomas G. and his son, John D. Carson, each, buying an interest. For nearly three-fourths of a century the mill had had an enviable reputation and made "fair returns" to its proprietors—without special guarantees from its foreman, or being the scene of a single serious accident to employer or employees till the morning of December 7, 1872, when it was entirely destroyed by fire. The capacity had been increased from a "one vat mill" to about 2,300 lbs. of the finest linen ledger and writing paper per day. It was rebuilt in 1873–4 on a more extensive plan, and is now owned by William W., son of David, John D., a grandson, Zenas Crane, Jr., a grandson of the "pioneer" Zenas, and Charles O. Brown, as a stock company—Charles O. as president, and John D. as treasurer and managers,—making the best quality of watermarked "Old Berkshire Mills Linen Ledger" paper.

Mr. Carson added a "machine," simply the "making cylinder" "and first press," in the year 1834, being the second "machine" put in town. In 1838 the "cylinder dryers" were added to the "plant," and constantly thereafter himself and sons put in the best of the improved appliances for making the best of paper; but the "Fourdrinier," and other labor-saving machines were "things of the future" even then. The business was not without its "vicissitudes;" for, down to 1824, if the capital was "intact," very little had been added; but prospects brightened and enlargement was under advisement but not undertaken. From 1834 to 1840 the struggle to keep even was a hard one, and many went down. From this time on, the history of the business shows alternation of success and reverse with both labor and capital. 1845 to 1850, depression; 1850, with the discovery of gold and other causes, came increased prosperity; 1857 to 1860 and 1863, in consequence of disturbed civil relations, the business was, as never before, paralyzed. From 1865, "inflation," the result of civil war, linked the general business of the country, capital and labor, indissolubly together, each swinging to the extreme of prosperity—seeming—and depression—real,—paper manufacturing now up, and now down, in the seething caldron of success and failure.

CHARLES O. BROWN,
President Carson & Brown Company.

The appended certificate confirms this history as to certain details:

U. S. A.—COMMONWEALTH OF MASSACHUSETTS, }
BERKSHIRE COUNTY, SS. }

January 24, 1881.

I have carefully compared the dates and historical part of the sketch of the pioneer paper mill, by Charles O. Brown, president, with the public records, and find the same to be correct.

Witness my hand and official seal,

EDGAR M. WOON,
[L. S] U. S. Commissioner.

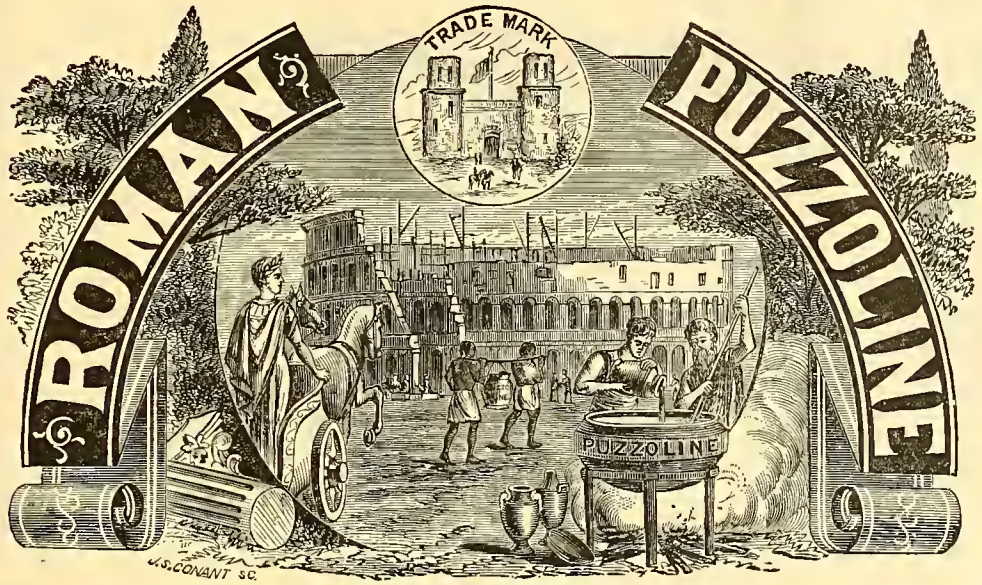
The Cement of the Ancients.

UNEXCELLED FOR STRENGTH AND DURABILITY!

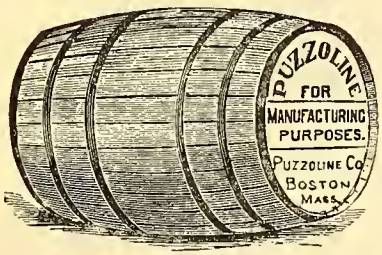
☞ CAUTION.—Manufacturers or others using adhesives of any kind are invited to examine into the merits of the above before purchasing, as none are genuine without the Trade-Mark, a castle, blown into the bottle.



☞ CAUTION.—Manufacturers or others using adhesives of any kind are invited to examine into the merits of the above before purchasing, as none are genuine without the Trade-Mark, a castle, blown into the bottle.

This new adhesive is a **liquid glue and cement combined,** and possesses greater strength and tenacity than any other known cement. It is composed of no injurious ingredients, **is entirely odorless,** and is **always ready** for use; no heat being required as with other adhesive compounds.

As a **Cement** in repairing **Crockery, Glassware** and **broken Ornaments** of all kinds, it is **unequaled.** It will stand the test of boiling water as no other adhesive will. As a **Glue** it is not affected by heat or moisture, and will hold more firmly than any other known preparation



CIMITOLINE:

A MUCILAGE.

Its action is quicker, it is not affected by moisture, will not sour, mold, or dry up in any climate, and does not wrinkle the paper, as is the case with mucilage now in general use.

DALTON, MASS.,

HAS BEEN AWARDED THE

GRAND PRIZE GOLD MEDAL

AND RECOMMENDED THE

Medal of Honor and Perfection

At PARIS, 1878,

This being the **HIGHEST and ONLY AWARD** given for

LINEN RECORD and LEDGER PAPER.

—A SPECIALTY.—

THIS Paper has received THE HIGHEST PREMIUM over all others from *the Cincinnati Industrial Exhibition, Massachusetts Charitable Mechanics' Association, Franklin Institute* of Philadelphia, Louisville Exposition, Medal and diploma from *United States Centennial Commission, Medal of Progress American Institute, 1877, and Medal of Improvement and Progress, Boston, 1878.* Its

PRINCIPAL ADVANTAGES

are as follows:—1. It contains more LINEN than any other Ledger Paper, has a longer fibre, and is, consequently, tougher. 2. Having a harder and better body, it frays less in erasure, so that by simply using the rubber after the eraser, the ink is prevented from spreading. 3. It is more uniform in Weight Color and Finish. 4. It never cockles if properly bound. 5. Its chemical action upon ink is such that it both writes and rules up better. For proof of the foregoing, refer to a large number of Stationers, Bookbinders, Bookkeepers, and Recorders, who have given it, after a severe test, the preference over all others. This paper is *Double Sized*, and will stand any climate or the most acid of fluid inks.

☞ **Send for sample sheet, ERASE and REWRITE FOUR TIMES on same spot.**

Each sheet is water-marked with name and date.

"The Stationer"—Every Thursday—$2.00 Per Annum.

VOL. IX.---NO. 10. NEW YORK, MARCH 10, 1881. WHOLE NO. 298.

Correspondence.

BOSTON NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

BOSTON, Mass., March 9, 1881.

Trade among the stationers has been only moderate during the past week, and what with the continuous inclemency, bad roads, and a blue feeling time generally all around, it was hardly to be expected that large sales would be the order of the week. With settled weather customers will show themselves.

Respecting Mr. Prang's generosity and shrewd business diplomacy, *apropos* his Christmas cards, the papers here are just now indulging in no small amount of criticism and suggestions, all of which, no doubt, is offered in the best spirit, especially on the part of the vanquished.

Regarding any possible future contest that Mr. Prang may inaugurate, it is "meekly submitted to that munificent king of prize givers" that, among other things, it might be a stroke of economy to save the cost of printing the statutes relating to designs by allowing contestants free choice of weapons, and thus enable him to obtain, at the slight cost of a Christmas card, a specimen of the work of such prominent artists as Elihu Vedder and C. C. Coleman; but "one cannot help thinking," says "Væ Victis," "that those competitors who hold themselves closely to the terms of the restrictions were unfairly tethered, unless the judges expound to our benighted intellects wherein lies the Christmas signification of 'de winnin' color' more clearly than any Boston paper has yet done. One or two of the latter have evidently made a conscientious effort to explain, but with results more vague than satisfying."

Furthermore, "a spasm of Hubistic pride" gives rise to the query why our art museum was not a good place for the last exhibition, and why New York was twice favored, since Mr. Prang is a Bostonion? It may be possible that Boston could not furnish competent judges to decide so important a matter; but, somehow, she always has proved herself equal to an emergency. It may be unreasonable to expect that Mr. Prang will, in good time, repeat his courtesy of last year, and allow his brother Hubites also to have a look at the worthy 500 designs that were considered good enough for the competition. It would be a matter of gratuitous art education to be sure, but anything of that sort is always as much appreciated here, probably, as in New York."

It is obvious from all this that there is some doubt about these cards being "Christmas cards;" also that the vanquished feel somewhat humiliated.

The University library, in Gore Hall, Harvard, needs a fund of $400,000 for salaries and wages. The library is a perfect Paradise of books—especially in ancient ones, centuries old.

The attention of bookbinders, pocketbook makers, &c., in Northern New England, is called to the fact that the New York house of J. S. Rockwell & Co., established in 1814, dealers in every variety of sheep leather, is represented in Boston at No. 18 High street.

The Dennison Manufacturing Company, 21 Milk street, is the leading house in this city, if not in the country, in the manufacture of tags, tissue paper and gummed paper. The establishment of the concern in this city is complete in all its departments, and its show window is one of the most attractive of its kind in the city. It is really surprising how the deft hand can arrange tags and tissues most artistic. The article of tag has become indispensable in any kind of business; but the firm of Dennison & Co. does something more than "play tag;" it tags the whole country, as it were.

The imported tissues of this house are remarkably beautiful in color and tint. Great quantities are used in the fashionable amusement of making screens, lamp shades, and even elaborate costumes for fancy-dress parties.

George Routledge, the eminent English publisher, has been in town during the past week.

J. H. Bufford's Sons, No. 39 Federal street (works at Harrison Square), report a good business for this season of the year. With improved facilities, the volume of their spring trade promises to be larger than ever before in the history of this house.

Representatives of our leading houses are now in various sections of the country looking after their trade; and reports to headquarters are quite encouraging. L.

BALTIMORE NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

BALTIMORE, Md., March 8, 1881.

Business here since I last wrote you has improved considerably, owing, no doubt, to the break in the weather and the inauguratian of President Garfield at Washington. Our proximity to the capital had the effect of filling our streets with strangers, and stores generally did a thriving business. The hotels were literally overrun, and it was no uncommon thing for visitors to be compelled to wander about all night for the want of a place whereon to rest their weary bones. The centennial travel of 1876 was nothing to it, and the crowds here actually exceeded those attracted to the city by our late sesqui-centennial celebration.

Towner, Landstreet & Co., dealers in rubber goods, report that their business has received a great impetus since they removed to their new and handsome warehouse, on the corner of Charles and Baltimore streets.

F. Albert Kurtz, of T. N. Kurtz & Son, is very successfully conducting the business so long managed by his late father.

The travelers of John A. Dushane & Co. report that business is very good in their line on the road.

John B. Piet has been awarded the contract for printing the annual report of the School Board for 1880. It will make an 8vo volume of about 250 pages. The same enterprising publisher has, after two years of persevering efforts, succeeded in having his Newell Reader adopted by the Anne Arundel County Commissioners for the public schools of that county, which is wide in extent and embraces Annapolis, the State capital. The majority of the teachers were in favor of the Newell Series, and the merits of the books have been indorsed by every paper in the State. They were prepared by Professor M. A. Newell, Superintendent of the State Normal School.

Charles H. Friend, manager of the book department of the Baltimore News Company, was married on Tuesday last to Florence M. Keener, a young lady noted for her amiability as well as for her good looks. The marriage took place in the Twelfth Presbyterian Church, and was witnessed by a large gathering of the friends of both parties.

John B. Piet, Jr., was absent from the city some days last week, a business engagement having called him to New York.

John Riordon, president of the *Mail* Printing and Publishing Company, of Toronto, Canada, and John Eastwood, manager of the *Times* Printing Company, of Hamilton, Canada, were in Baltimore last Saturday week, and paid a visit to the different newspaper offices. They were much struck with the brilliancy of the Weston electric light used in the composing room of the *News*, and made many inquiries as to how it was liked by the printers, &c. Mr. Riordon, besides being president of the *Mail* Company, is also proprietor of the Merritton paper mills. He was en route for home when he happened in Baltimore.

The proprietor of the Stylographic pen, Chas. W. Livermore, of Providence, R. I., has been with us for the past week, introducing his deservingly well thought of scratcher. The trade here regard it as a good thing, and it may now be found in the stocks of the majority of the

stationery houses. Your Boston correspondent has already given your readers a full description of the pen.

Thomas R. Scott, of Houghton, Mifflin & Co., Boston, Mass., and Thomas Bruder, representing J. Turgis & Co., New York, have been here during the past week. J. McDrake, manager of the educational department of the Eagle Pencil Company, of New York, has also been here visiting the public schools in the interest of his firm. W. P. M.

CRESCENT CITY NOTES.

[FROM OUR OWN CORRESPONDENT.]

NEW ORLEANS, La., February 5, 1881.

This city presents a holiday appearance, and many strangers are already here for Mardi Gras.

The book stores will undoubtedly be benefited by it. Well, they need it bad enough, as business has been very poor since the holidays, it having rained constantly. The cotton crop being short in comparison with last year rather dampens the ardor of the business community, who expected a very large trade; but their expectations have not been realized. Pen cannot describe what the South has suffered this winter, and if Southern merchants should be somewhat tardy in balancing their accounts, Northern merchants should be lenient.

I was somewhat surprised to find such a light stock of goods at E. C. Palmer & Co.'s, invoiced, I am told, at $37,000, with an insurance of $35,000, in foreign companies only. Regarding the mysterious explosion, of which I have heard so many accounts, I can only say: "Coming events cast their shadows before."

At F. F. Hansell's I found one of the finest stocks of goods in the entire South. A large line of fine blank books were noticed. Everything showed prosperity. A young man, with energy and capital, standing equal with the older men, has risen from the amateur press to his present location. A building adjoining, in course of erection, has seriously interfered with his business, as part of the wall was taken down and he was obliged to move much of his stock to a vacant store on the corner, but now everything is again in working order, and he reports trade fair. His two travelers are packing trunks and will take the road next week.

J. C. Eyrich, the leading bookseller, reports having done a fine holiday business, and I noticed few fine books left over. He has sold nearly $200 worth of Prang's fine valentines, and has ordered largely of his Easter cards.

J. C. Buckley, stationer and printer, displays a fine line of Lowell's engraved cards, for which M. A. Reay & Co. are sole agents. He has been very active in introducing these goods to the trade. He had a good stock in store and warehouse; reported business fair.

Some report business good, others as only fair, and some as bad.

Pauliu Durell, stationer, printer and bookbinder, complains loudly, says business has been and is now very poor and very much cut up, therefore wishes to quit. He offers his stock, fixtures, printing office and bindery, which he inventories at $18,000, for $8,000, on very favorable terms.

George Ellis, the ever active, wide-awake stationer and newsdealer, reports a fair holiday trade, but has many goods left over. He has done a large valentine business, principally in Prang's fine goods.

J. B. Wasson, stationer and printer, reports business as having been very fair, has not any complaints to make and says he expects a good spring business, although it will come later this year than usual.

I notice Mr. Gunn, representing Faber & Co.; Dovell, of T. Davids & Co.; Clarke, of Tower Manufacturing Company; Adams, of Willy Wallach, and Mr. Thomas, of John Gibson, are in town.

W. F. Dunn & Brother have made considerable progress with lithographing in this city. Their design for the tickets furnished to the committee of the Continental Guard for the ball given to the Boston Lancers and the Charlestown Cadets on Washington's birthday, was accepted in preference to the one furnished by a Baltimore firm. Their carnival blotter is quite unique. I send you samples of both. They have striven hard to keep that part of the trade in New Orleans. They are the only ones in the city, I am told, capable of doing the work in colors.

James Kirkpatrick, bookseller and stationer reports having done a good holiday business.

J. Gresham did a good holiday business, and has also done well since the holidays. He told me that his receipts averaged $3,000 a month. After his financial difficulties he started on Canal street in a small store, and as he is an energetic, active, pushing man, and well known to the public, he succeeded so well as to find his quarters too small, consquently last year moved to his present location on Camp street. I inspected his stock and judge he had about $2,500 to $3,000. He says he has met all his obligations thus far promptly.

Louis Schwartz generally keeps a very full line of stationery, and fancy goods of the finer sort. He imports many goods direct from Paris. He said he had done a fine holiday business, and was well satisfied. The valentine trade was very good, having sold large quantities of Prang's fine goods and sent him a large order for Easter cards.

There is some dissatisfaction in the trade, but I think they will get their usual share, although coming this year later than usual. LEONIDAS.

PITTSBURG NOTES.

[FROM OUR OWN CORRESPONDENT.]

PITTSBURG, Pa., March 7, 1881.

In my letter of February 28 I announced the death of J. W. Pittock as being expected every minute. By some mistake this sad event was made to appear as if it had really happened. There is very little hope of saving his life, although he was still living when I last heard from him.

W. W. Edgar is doing a good business, and says that the amount of trade for 1880 was about one-third in advance of any three years previous. He is agent for the Mackinnon pens, which always give perfect satisfaction. He has one of the finest stocks of fancy stationery that can be seen in Pittsburg. I found at his place nearly every periodical of any importance which is published in the United States.

James B. Dodge & Brother also find that their business has increased considerably this year. They are the only one here who make a specialty of lawyers' blanks and stationery, and have a well established reputation in this branch. Their stock of staple and fancy stationery is considerable.

George W. Backofen, the only important house which deals particularly in artists' materials, makes some complaint of business. The bad weather has kept customers, many of whom are ladies, from coming to the city. The spring season will doubtless make amends for all that he has lost during the past two months. Janentzky & Co., of Philadelphia, and C. T. Raynolds & Co., New York, are the chief sources of supply. Taber & Co.'s pretty goods have had a great success at Backofen's.

Mills & Brother have altogether abandoned the stationery trade, and have one of the best printing offices in Pittsburg. They print a number of journals, &c., and have an excellent reputation for job work.

Myers, Shinkle & Co. have quite a large department of stationery articles, where the best manufacturers of the East are represented. Their blank book factory is well known and appreciated, and their printing office is well supported by the railroads, banks and insurance companies.

Wilson, Walker & Co., quite an old house (established for twenty-three years), are engaged in the same line of trade as the house last mentioned, and like it has a high reputation for its goods and the excellence of its printing.

Stevenson & Foster have a fine trade and a good selection of stationery. They are blank book manufacturers and printers.

Carter's and Stafford's inks sell well here. In steel pens Turner & Harrison, Gillott and Esterbrook take the lead. Langfeld, Turner & Andrews have their goods everywhere. In gold pens, Foley, Leroy W. Fairchild, Aiken, Lambert & Co. appear to have much success.

The pencil sharpeners of Geo. A. Ogle, Baltimore, are in demand here. They are certainly good things of their class. J. VIENNOT.

MONTREAL NOTES.

[FROM OUR OWN CORRESPONDENT.]

MONTREAL, March 2, 1881.

After a long silence I take "my pen in hand" (as the ancients used to say).

My silence has been forced on account of pressure of other matters.

The holiday trade (now so long past) was the best in some years, many of the retail houses making double and treble the sales of last year. On the whole, the trade of 1880 was good.

January, 1881, opened well, and the rush still keeps up with the printers and manufacturing stationers; in fact, with all the trade a fair business is doing—some of our printing and blank-book houses working over time. I presume this is the first of the "boom;" may it boom louder and louder.

In this section of the country we have had continued cold weather and good roads all winter, which has greatly tended to the general prosperity. We are still in mid-winter, our spring not commencing usually until the close of March.

The wholesale stationers and fancy goods men report business as good and orders coming in well. Collections, too, are much improved, which is a healthy sign.

One of our leading paper makers is putting in some new machinery in his mill.

Alex. Buntin & Co., wholesale paper, &c., report an increase in sales over last year up to date of $100,000—quite a respectable business in itself.

The Canada Paper Company also reports good sales and good prospects for spring trade.

J. C. Wilson & Co.'s mills, at Lachute, are rapidly approaching completion. It is said that they will be one of the best appointed mills on this continent. Alderman Wilson has promised me a full and detailed description when completed, which will doubtless interest some of your readers. They are full of orders in their bag factory and report trade as brisk.

Morton, Phillips & Bulmer have just enlarged their premises in time. They never were so

busy; in bindery, printing and stationery departments things are lively, the two first named departments working at night. This firm is one of the largest employers of labor in this line in the city. It is at present on a 3 per cent. interest table, which will be ready this month.

Dawson Brothers are busy, and working in their bindery at night to catch up with orders.

J. Parslow, William Drysdale & Co., Beauchemin & Valois, and Rolland & Fils all report business as very good.

J. M. O'Loughlin, who had a fire last month which burnt out his stock, valued at $6,000—insured for $3,000—has got all nicely fitted up again, and looks as if a fire was not a bad thing, everything is so new and clean.

There are some rumored changes in the stationery trade, of which more anon.

J. B. Laplante, printer, has severed his connection with the Montreal Printing Company and starts on his own account again.

We are having a "bit" of a controversy over the contract for the city stationery and printing, which contract stands or serves for six years. The highest tenderer seems to be the favored one. The matter has been discussed both in the public prints and among the trade and citizens generally for over two months. Still the matter is open, with the probability that in the face of all that has been said, the firm which has had it for the past five years will still hold on to it. Verdict: "Jobbing somewhere."

G. J. Gebhardt & Co., lithographers, playing card and cardboard manufacturers, are seeking incorporation as a joint stock company, under the name of the "Canada Lithographic and Card Company," with a capital of $75,000. In their prospectus they show an excess of assets over liabilities of $15,753.57; $40,000 of the stock is offered to the public, $20,000 being taken by the Messrs. Gebhardt themselves, and the $15,000 to be held by the company for disposal in case more capital is required.

Your remarks in your editorial last week anent the too much indifference and want of courtesy often shown to customers is, alas, too true of many of your New York houses. The writer has had some unpleasant experience in that way in your city, three different houses on William street being among the number. It appeared to me as if it was a favor to have to ask to be attended to. In one instance the writer walked out without being served, and sent his order by mail; in the two other instances he had to ask to be served, and the consequence is that he has since bought from other houses which have been more courteous. We do things differently in Canada—a person is asked politely if they "can be attended to."

The following representatives have called during last month: James McDonald, of John Walker & Co., London, Eng.; W. King, of Wm. Collins' Sons & Co. (limited), Glasgow; a traveler from the Morgan Envelope Company, Springfield, Mass.; Kinney, from the Plimpton Manufacturing Company, and A. A. Andrews, of the Holyoke Glazed Paper Works. C.

TORONTO NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

TORONTO, Ont., March 5, 1881.

Winter, like a thousand or more other things we are subject to in this world, is very nice and enjoyable, providing you don't get too much of it; and in this country of ours—I am speaking from a Canadian point of view, and I guess the same may be said for a good many degrees south of 45, this zone—we very often get a little more winter than is either desirable or agreeable. All are agreed that there are a great many enjoyable sides to this rugged, frosty season. Who does not call to mind the cheerful fire, the merry sleigh ride, the tobogganing parties, the exhilarating exercise of skating and snowshoeing, and all that sort of thing. But these, like all other sublunary things, become monotonous; and after going about for months with one's body incased in flannels and furs, like the layers of that succulent, bulbaceous vegetable the onion, one begins to long for the time when he can begin to peel off one sheath after another and get out in the sunshine and warmth of spring.

Although winter has got a pretty good grip yet, there are unmistakable indications that it will soon have to let go. The ice is failing and the snow is going. Let me amend this, for the fact is we are at this moment having the heaviest fall of snow we have had this winter. It is coming down in a perfect avalanche of enormous flakes that stick to you like wax. The streets are simply horrid, and from the great weight of wet snow we shall, no doubt, hear of roofs collapsing and other damage through the country.

In passing along by the docks yesterday, I noticed that work had commenced on the vessels, and it is to be hoped that they may get to sea early.

We are moving along very smoothly just now; no political excitement; business, for the time of year, good, and prospects excellent. Various manufacturing enterprises are starting up all over the country. Among the most recent in this city is the York Envelope and Manufacturing Company. It is a joint stock company, comprising some of our well known citizens, and is in full working order. The manager reports orders as coming in rapidly, and speaks encouragingly as to future prospects.

The new firm of Nisbet, Byron & Co., wholesale stationers, &c., who opened on the 3d of January, are getting on admirably. Mr. Byron continues to travel for the new firm, as he did for the firm of which he was formerly a partner, and is gratified to find that his old friends receive him as cordially as ever. As an evidence of the favorable opinion the trade have of the new house, we may state that several days before they opened numbers of orders had been received.

James Bain & Son are getting out three or four new books of a religious character. They report business good.

We are doing something to open up direct communication with foreign countries. A line of powerful steamers will commence this season between Brazil and Halifax, and another line between Antwerp and Montreal.

From different correspondents writing to our city papers there appears to be a manufacturing boom in Montreal. They report factories of all kinds as overflowing with orders and working over-time. A new pulp mill is about being started there.

As your readers, no doubt, take some interest in our champion oarsman, I cut from the *Mail* the following notice of his reception last night, and send you a paper with an account of the affair. "Hanlan arrived home yesterday, and was accorded just that enthusiastic welcome which he has so well deserved. From the station to the Grand Opera House, where the formal reception took place, the scene was one great ovation. It was a miserable night, but still the people turned out in their thousands, and shouted themselves hoarse. The Opera House was well filled in every part, and cheer after cheer greeted the champion at every possible opportunity, showing that his popularity is not diminished, but has been increased, as it should have been, by his recent victories. Hanlan looked very happy through it all, but still there was a trace of anxiety on his face, as if all was not there that he wanted. The entertainment was in every respect a grand one, and both the gymnasts and the Thirteenth Battalion band have earned the lasting gratitude of the citizens of Toronto by their timely generosity. It is true the house was not crowded, but people could never have known what they were missing or they would have been on hand." C. H.

OHIO NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

DAYTON, O., March 7, 1881.

Under the influence of a warm sun, the ice has disappeared and mud is on top again. Every one is glad to see it, or at least glad that winter is about over.

Trade is not very active, although it cannot be called dull. All commercial travelers report trade on the road as good. Orders are being delayed by want of goods and delays on railroad transportation.

A circular from some of the envelope makers indicates a small advance. After the bad faith shown by them to dealers last season, buyers are chary of placing large orders in anticipation of heavier advances. Wrapping paper of all kinds were advanced at a late meeting in Chicago. Dealers have to some extent lost faith in the mills, as their paper is always offered on the market by outsiders at less than mill rates.

There are within twenty-five miles of Dayton at least four new mills in prospect, and, if the price of paper is maintained, at least ten more will be started. These are facts that the mills can look in the face or not as they see fit.

Among representatives here within a few days are Mr. Watkins, of the American Lead Pencil Company; E. C. Ripka, of Rumpp & Co., pocket books. They both appeared pleased at the contents of their order books.

The retail dealers report a fair inquiry already for Easter cards. Won't some patriotic citizen get out some Fourth of July cards. This great American birthday ought not to be neglected.

No especial demand can be noted for any line of goods, but a good, steady trade in all lines in season—toys, marbles, window papers, wall papers, &c.—is noted in the MIAMI VALLEY.

[*For other Correspondence see page* 303.]

A RARE OLD BIBLE.

There is an old Bible up in the Congressional Library at Washington which is worth a walk to the Capitol to examine. It is of Italian origin, and it is supposed to have been written in the thirteenth or fourteenth century, but the actual date is unknown. It is written in Latin, and upon vellum, in clear, bold characters, and extremely uniform. The writing is in two columns, about three inches wide, with a margin of about two inches. It is embellished with 146 miniature paintings and upwards of 1,200 smaller illuminations, which are beautifully executed, and are as brilliant to-day as the day they were done. The initials of books and prologues are two and a half inches in height, and those of the chapters are one inch in height. It is contained in two large volumes, and cost the government $2,200 in gold when gold was at a high premium, and was purchased at a sale of the library of Henry Perkins, Hanworth Park, near London, in June, 1873. The skins in the first volume have all been repaired, except five; in the second volume they are nearly all perfect.

OLD BERKSHIRE MILLS

DALTON, MASS., U. S. A.

One party writes: 'The two hundred RECORD BOOKS, for 83 of the 99 Counties, now on exhibition at the Iowa State Fair, at Des Moines; and all, but four (!) of them, made from your 'OLD BERKSHIRE MILLS LINEN LEDGER,' Medium, 40lb., make a splendid show."

[The above cut is a fac-simile of the wrapper used on the Linen Ledger Paper.]

We will pay for any book rejected on account of fault in the paper. Send for Samples, test them in comparison, and see that your books are made from paper thus water-marked.

L. PRANG & CO.'S
Easter Cards for 1881.

We take pleasure in herewith presenting to the trade our Price List of Easter Cards for this Season:

ASSORTMENT.—Our Easter Cards are made up in sets of one dozen, except Nos. 11 to 19, and are put up in a box or envelope. Each set contains all the designs of the series; and as no series has more than six designs, each design is more or less repeated in the set.

ENVELOPES.—Fine Cream-Tinted Envelopes are furnished with every series, without extra charge.

EASTER CARDS, WITH SILK FRINGES.—We would call especial attention to these, as they will doubtless prove very attractive. These goods are made up with the best quality heavy silk fringe, made expressly for us. All fringed Easter Cards are furnished with Protectors and Envelopes, and are put up with assorted colors of fringes.

LIST OF PRANG'S EASTER CARDS FOR 1881.

No. of Series.	No. of Designs.	DESCRIPTION.	HOW PUT UP.	Retail Price per Set.
1	1	Daisy Egg, Folding Design, silk tassels	12 Cards, with Envelope	$7.20
1 F	1	Same Design, with silk fringe and tassels	12 Cards, with Protectors and Envelopes	12.00
2	1	Easter Dove	12 Cards, with Envelopes	6.00
2 F	1	Same Design, with silk fringe	12 Cards, with Protectors and Envelopes	12.00
3	2	Easter Chariot and Easter Boat	12 Cards, with Envelopes	3.00
3 F	2	Same Designs, with silk fringe	12 Cards, with Protectors and Envelopes	6.00
4	2	Daisies, Pansies and Butterflies, folding cards	12 Cards, with Envelopes	3.00
4 F	2	Same Designs, with silk fringe and tassels	12 Cards, with Protectors and Envelopes	6.00
5	4	Large Floral Designs	12 Cards, with Envelopes	3.00
5 F	4	Same Designs, with silk fringe	12 Cards, with Protectors and Envelopes	6.00
6	4	Iris Designs	12 Cards, with Envelopes	2.40
7	6	Gold Crosses with Flowers	12 Cards, with Envelopes	2.40
7 F	6	Same Designs, silk fringe	12 Cards, with Protectors and Envelopes	5.40
8	4	Floral Designs	12 Cards, with Envelopes	3.00
8 F	4	Same Designs, with silk fringe	12 Cards, with Protectors and Envelopes	6.00

Trade Novelties.

[We will be glad to receive samples of all novelties issued in the trade, and will notice all such which possess merit free of charge. It is desirable to accompany descriptions with cuts whenever possible.]

TOY PISTOL.

The accompanying cut illustrates a new toy pistol, styled the "Creedmoor," just introduced by A. Weidmann & Co. It is operated with paper caps, and has the advantage of shooting off a stick or torpedo. Being seven inches long, it is longer than any toy pistol in the market for the price at which it is sold, viz., ten cents. Large orders are already being received for it.

NEW PATENTS.

No. 238,210. Canceling Stamp.—De Witt C. Breed, Buffalo, N. Y.

No. 238,233. Invoice or Scrap Book.—Theodore Hartung, Chicago, Ill., assignor of one-half to Ernest J. Nolin, same place.

No. 238,278. Chromatic Printing Machines.—Thomas B. Dooley, Chelsea, assignor to William H. Forbes, Boston, Mass.

1. The combination of a stationary bed, a reciprocating platen, inking rollers to revolve in stationary bearings, a bed plate reciprocating to have the printing surface or surfaces thereon rolled by one or more of the rollers, and to be in position between bed and platen for giving an impression alternately, and an ink plate having a reciprocating movement to deliver ink to the inking rollers. 2. The combiuation of two stationary beds, two reciprocating platens, inking rollers located between the platens, a bed plate bearing the printing surface or surfaces and to pass from one bed to the other, and in contact with one or more of the rollers, and a reciprocating ink plate located to come in contact, during its movement with one or more of the rollers. 3. The combination of a grooved ink plate, one or more ink rollers revolving in stationary bearings, an ink fountain and one or more grooved distributing rollers lying diagonally on the ink plate, the latter having a reciprocating movement between, to come in contact with the ink rollers, and a roller or rollers connected with the fountain.

No. 238,387. Type Writer.—Thomas Hall, Brooklyn, N. Y.

1. In a type writing machine, a plate adapted to move intermittently, a type form attached thereto and movable, to bring any given letter into alignment, and mechanism, substantially as described, for moving the plate and type form. 2. In a type writing machine, an elastic type form, in combination with a plate having an opening therein, the form being movable to bring any given letter into alignment with the opening, and permitting any given letter to be pressed by a suitable plunger upon the paper through the openings. 3. The combination of a movable type form, a plate having an opening therein, an ink cushion, and mechanism for pressing the type upon the ink cushion and paper, &c.

No. 238,403. Binder's Reel.—Christian Konold, Evergreen Hamlet, and Frank Deming, Allegheny City, Pa.; said Deming assignor to said Konold.

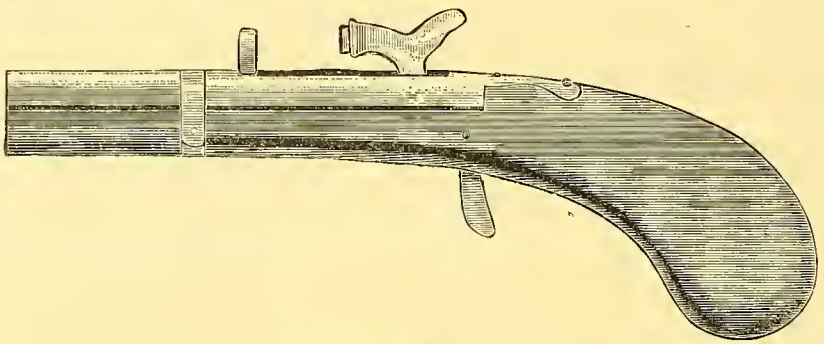
1. The combination, in a binder's tool, of clamping jaws for holding the free end of the wire, a guide for keeping the line of wire practically parallel with, and in juxtaposition to, the clamped end, so that the same may be twisted together, and a reel for containing the wire and taking up the slack thereof. 2. The combination, in a binder's tool, of a reel, a pair of clamping jaws, and a pair of shears attached to the jaws. 3. A binder's tool having a reel case composed of two parts, pivoted to each other and operated by suitable handles.

GOLD AND BRONZE PRINTING.

Printing in gold is very much more extensively practiced in the present day than formerly, and has, in fact, become a regular adjunct of color printing. It is not necessarily either a very difficult or a very expensive process, yet few ordinary pressmen can perform it with any degree of success.

This kind of work may be done in two ways; 1. By using gold leaf; 2. By using gold dust.

What is known in the trade as gold dust is merely an imitation, and should be more properly called bronze. There are a variety of



The "Creedmoor" Toy Pistol.

colors to be had, and they are classified thus:—Patent bronze powders, pale, deep, extra deep, and red gold; citron, orange, flesh, copper, orange copper, scarlet, crimson, purple, and green; white and silver composition. Hand made bronzes: citron, orange, pale and deep gold; pale scarlet and crimson, brilliant pale and deep. The prices of these powders vary according to the colors ranging from 7s. 6d. to 50s. per pound. We would caution the printer, however, that no saving is effected by using the coarser kinds, as only the finer grains adhere to the impression—all the rest has to be thrown away.

Gold leaf is called red finishing, extra deep, regular deep, lemon pale, white. There is also silver leaf in several descriptions, as well as aluminium leaf (chiefly for bookbinders), and "metal leaf," Planier, middle, and ordinary.

Gold leaf is made in the following manner: The gold to be beaten into leaves or layers is prepared by melting in a plumbago crucible, and then cast into ingots, forged, and passed between rollers until it assumes the shape of a long ribbon, and is as thin as ordinary writing paper. Each of these ribbons is cut into a number of small pieces, and forged upon the anvil. These small square pieces weigh about 6 3-10ths grains each, and are about the 760th part of an inch thick. They are next annealed, and interleaved with vellum about 4 inches square. About twenty vellum leaves are placed on the outside; the whole is then placed in a case of parchment, over which is drawn another similar case, so as to keep the packet tight and close on all sides. It is next laid on a smooth block of marble or metal, and the workman begins beating with a round-faced hammer weighing 16 pounds. The packet is turned over occasionally, and the beating continued until the gold is extended to nearly the size of the vellum leaves. The packet is then taken to pieces, and each piece of gold is divided into four, with a steel knife having a smooth but not very acute edge. These pieces are next interlaid with pieces of animal membrane, from the intestines of the ox, of the same dimensions and in the same manner as the vellum. The beating is continued, but with a hammer weighing only 12 pounds, till the gold is brought to the dimensions of the interleaved membrane. It is now again divided into four, by means of a piece of cane brought to a fine edge, the leaves being by this time so thin that any accidental moisture condensing on an iron blade would cause them to adhere to it. The leaves are next divided into three equal portions, and interleaved with membranes as before, and beaten with the finishing hammer, weighing only 10 pounds. The packets are now taken to pieces with the aid of a cane instrument and the breath, are placed flat on a leather cushion, and cut into squares one by one, by a small square frame of cane made the exact size, and are lastly laid in books of twenty-five leaves each, the paper of which is first smoothed and rubbed with red chalk to prevent the leaves adhering. By the weight and measure of the best gold leaf it is found that one grain can be made to cover 56¾ square inches, and from the specific gravity of the metal, together with the admeasurement, it follows that the leaf itself is a 282,000th of an inch thick.

For the purpose of printing in gold, impressions should first be taken with ordinary printers' ink, after which the bronze dust should immediately be applied by means of a tuft of cotton. Some printers apply the bronze with a large brush, but by this means a great deal of the dust mixes itself with the air, and is inhaled by the workman, which is dangerous. The chief ingredient of this metal being copper it forms verdigris, and is productive of colic and vomiting. The smoother the paper upon which the printing is done the more brilliant the effect. If it is desirable to have very rich gilding, bronzes of various colors may be used. Care must be taken that the paper which is used for the bronzing process is perfectly dry.

Very beautiful effects are produced by using "porcelain paper." This is manufactured by applying several very thin and even coatings of color consisting of Kremnitz white and a small quantity of glue and alum to one surface of the paper. If the coated side of the paper is laid upon a polished steel plate, and strong pressure put on it in a copperplate press, it receives that beautiful gloss which distinguishes it from all other satin and glazed papers.

If this rolling operation is delayed till after the gold bronze has been applied, it will much improve the appearance, especially if the card is passed several times between the rollers.

These cards previous to being printed on, should be slightly damped, which is best done by putting them for a few moments between wet sheets of paper. It is advisable to let the cards dry for a few days previous to their being rolled.

If this gradual drying cannot be done, owing to pressure of time, the steel plate should, after each rolling, be well rubbed down, to pre-

vent any possible stains which might otherwise soil the cards.

The gloss may be made still more beautiful by wetting the cards, previous to pressing them, beween damp sheets of paper, care being taken at the same time that the paper be not too wet, as it would otherwise cause the cards to adhere to the steel plate.

As a matter of course, gold and silver dust may be used instead of the bronze, though the latter will be found good enough for all ordinary purposes, as that kind of work is but of rare occurrence which would warrant so large an outlay as the use of either of the former would entail.

For printing in gold with *leaf*, the paper or card should be printed with a composition consistiug of two parts of varnish of medium strength, one part virgin wax, and one part Venice turpentine. This must be mixed with the desired color, more especially with one of such shade as may resemble somewhat the color of the gold, so as to hide any defects which might occur in the laying on of the gold. Light chrome yellow of burnt ochre gives a good and appropriate color.

After the impression is taken, the gold is laid on. If imitation gold is used, it may be laid on with the fingers. Should it be found adhering to them it is advisable to rub them with Spanish chalk.

But if gold of fine quality is used, a gilder's pallet is necessary, which consists of long badger's hairs, fixed between two cards. These hairs should be slightly greased by passing them over one's cheek or head, which will facilitate the removal of the gold leaf from the book to the card or paper, upon which it should then be pressed, by means of a cotton rag.

To separate fine gold it should be laid on a leather-covered cushion, which has been previously rubbed over with Spanish chalk, and then cut with a finely polished knife specially kept for that purpose.

Generally speaking the treatment of the fine gold requires a certain amount of dexterity, and it may he as well to notice the mode in which gilders and bookbinders perform similar operations. As for the imitation gold, the whole book may be cut through with a pair of shears. This gold being very cheap, it is not necessary to be as economical in its application as with the finer qualities.

An essential point to the success of the operation is to procure gold leaf as thin as it can possibly be had, having taken care that all the leaves are of the same shade. It often happens, particularly with the cheaper sorts, that some leaves are more or less yellow than others, which has a most damaging effect if used on one and the same object.

The best and thinnest imitation gold is called Planier metal, and is largely manufactured at Fürth, near Nuremberg. Each packet contains ten books of 250 leaves—*i. e.*, 2,520 leaves in all.

After the gold has been thus applied the impression should be laid between two sheets of paper, and rubbed over on the outside with the hand. The sheets with the impression contained within them must now be laid on the top of the next one, and then both should be brought under the rubber, so that the gold may be fixed by means of pressure.

If common metal is used, it is a good precautionary measure to have the impressions twice under the press.

If there is time, the work should be allowed to dry for a few days; if not, it may be rolled immediately, care being taken to give only a very gentle pressure.

In proportion to the coarseness of the gold used, the type with which the job is printed should be large and bold; for this kind of gold does not affix itself easily to fine lines, and if the space between two lines be too narrow, the flannel is likely to remove the gold from the finer parts altogether. But if any description of fine gold is used, it may be applied with confidence to the smallest type or the most delicate borders. —*Printers' Register.*

DELANO'S

RAILROAD Red Rubber Bands and Rings. COMMERCIAL

THESE goods are put up in bulk, each box containing a pound, thereby saving the expense of putting them up in gross and great gross packages, and are designed for use by parties consuming large quantities. These goods are very popular with **STATIONERS DEALING** with **LARGE CORPORATIONS, &c.**

THE SIZES ARE AS FOLLOWS:

Elastic Bands. Nos. 27, 28, 29, 30, 31, 32, 33, 0¼, 0½, 0¾, 00¼, 00½, 00¾, 000¼, 000½, 000¾, 0000¼, 0000½, 0000¾.

Nos. 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20 and 50. **Elastic Rings.**

P. O. Box 1337. Z. DELANO, Boston, Mass.

IF YOU WANT THE BEST STYLOGRAPHIC PEN,

The Latest and the Best. Circulars on application.

Examination Solicited and Satisfaction Guaranteed.

The attention of the Trade is called to the improvements made and advantages offered in Livermore's New Stylographic Pen.

Patented July 15, 1879, and March 9, 1880.

FIRST—**A Smaller Air Tube**, allowing more space for the ink, and rendering the operation of filling easier and less frequent.

SECOND—**The Manner of Fastening the Needle**, not to the air tube, where it would be in danger of being bent or injured every time the pen was filled, but in the point, where it is not so exposed.

THIRD—**The Protection of the Spring** by a silver casing, preventing the ink from clogging its action.

FOURTH—**The Duplex Interchangeable Point Section**, furnishing great facility in cleaning the pen.

FIFTH—**The Ease with which Repairs can be Made.** The needle being in the point, it is not necessary to send the whole pen to the factory, but any dealer can supply a new point.

SIXTH—**Freedom from Legal Difficulties.** The New Stylographic Pen is manufactured under the patent controlling the use of an air tube in a Fountain Pen, and it is therefore free from legal complications.

Trade Gossip.

All new goods and designs which are not, strictly speaking, "Novelties" will be noticed under this head. The trade are requested to forward descriptions with samples in order to secure proper notice.

Bonner N. McCraven, stationer, Houston, Tex., has sold out.

Joseph Sanders, bookseller and stationer, Chester, Pa., is dead.

Charles C. Barrett, bookseller and stationer, Portland, Oregon, is dead.

The demand for Victor E. Mauger & Petrie's French A B ink is immense.

McLoughlin Brothers are now shipping large quantities of goods to Australia.

R. A. Chaplin, dealer in fancy goods, Halifax, N. S., has sold out to R. P. Bliss.

L. Hersey & Co., paper stock dealers, Gloucester, Mass., have dissolved partnership.

Edward A. Selden, of the firm of Selden Brothers, printer, Philadelphia, Pa., is dead.

Cummings & Meuser, publishers of the *Inquirer*, Galion, Ohio, have dissolved partnership.

J. H. Miller & Co., printers, Columbus, Ohio, have dissolved partnership. J. H. Miller continues.

The firm of P. Boyer & Co., printers and publishers, Ridgetown, Ont., Can., has been succeeded by Boyer & Gadd.

George L. Pease, of Boornm & Pease, returned home this week from his trip South, and has settled down to business again.

McCarty & Hasberg say that the trade will find it to their advantage to peruse their advertisement in another column.

George E. Desberats, lithographer, printer, &c., Montreal, P. Q., Can., has admitted Arthnr Simard as special partner for $5,000, to March 1, 1887.

George Routledge, of the firm of George Routledge & Son, the London publishers, has been in this city this week, but returns home by Saturday's steamer.

George D. Bristol and Rufus H. Pickett, composing the firm of George D. Bristol & Co., stationers, 165 William street, this city, made an assignment on Thursday to W. H. Evans, giving preference for $600.

The Phœnix Paper Mills at Peekskill, N. Y., operated by George F. Hoffman, were burned on Monday morning. The loss is about $8,000. The amount of the insurance, owing to the absence of the owners, is unknown.

Louis A. Lipman, one of Boorum & Pease's representatives, was taken very sick a few days ago at Adrian, Mich., and little hope was entertained at one time of his recovery, but the last intelligence received in regard to him was that a change for the better had taken place.

W. R. Andrews, publisher of the *American Queen* and the *Bazaar*, at No. 154 Nassau street, made an assignment Thursday to Albert L. Thomas, giving the following preferences: Sharp's Publishing Company, $12,788.69; Butler & Johnson, $1,755.53; Thomas Clark, $2,279.24; J. P. Craighead, $100. The assignment was forced on account of the failnre of his uncle, Deforest Weld, of Jamestown, N. Y., with whom Mr. Andrews was in partnership in the dry goods business in New York about ten years ago. Mr. Andrews has a branch in Cincinnati.

M. F. Tobin has published a reduced fac-simile of the celebrated painting, "The Shadow of Death," by Holman Hunt. It represents a vaulted chamber, the workshop and humble dwelling of Joseph, in Nazareth. A carpenter's bench is placed near the window; in the chamber are two figures—that of Jesus in perfect manhood, that of His mother in the dress of a woman of Nazareth. It is the hour of sunset when men rest from labor. Standing against the low sunlight the body of Jesus throws upon the wall behind it a sharply defined purple shadow, the incidence of which on a cross-beam, nailed up as a tool-rack, naturally suggests a figure nailed to the cross.

Quite a mania has broken out lately for making collections of cheap chromo cards. To supply this great demand the Derrickson Card Works on Frankfort street, have a variety to select from, embracing some 500 different designs, no two of them being alike. It is astonishing to know the extent of business being done in cheap advertising cards, and the avidity with which they are sought, the sales in this city alone extending up in the millions weekly.

I. H. Hamburger has just received an excellent new line of French advertising and birthday cards. The latter, as well as the Easter cards offered by the firm, are tastefully and elaborately decorated with the finest silk and satin fringes and tassels. All interested in this line should see these goods before purchasing elsewhere.

Charles J. Cohen, Philadelphia, is now receiving a prime lot of Cumberland lead (from the London house) for the manufacture of everpoint leads for gold and metal pencil cases; these are made in fifteen sizes and are supplied to the stationery trade neatly boxed and labeled, and in bulk to makers of the pencil cases.

Charles J. Cohen, Philadelphia, is having a steady demand for special sizes of envelopes suitable for Easter cards. Several new shapes and sizes have been added recently, and the assortment as now offered, Mr. Cohen says, will meet every requirement of the dealer.

Several members of the militia regiments which passed through the city during the week, en route from Washington, belonged to the stationery trade, and many of them took advantage of their visit here to select goods.

Brown Brothers, fancy goods dealers, Lowell, Mass., have dissolved partnership. J. B. Brown continues under old style, and J. W. Brown continues under his own name.

J. G. Lugar's Son & Co., dealers in paper hangings, New York city, have dissolved partnership. Frank Lugar continues under same style.

Christian Jourgensen, of 30 Liberty street, this city, will leave here to-day with his family for a short trip of pleasure to Bermuda.

P. Morgernstern will soon show the trade a beautifnl assortment of Christmas, New Year's and French advertising cards.

F. F. Rnssell, hookseller and stationer, Lansing, Mich., has made an assignment to Charles Connell.

Hard & Parsons report brilliant prospects, and are already succeeding beyond their anticipations.

The stock of the Orange County Publishing Company, Bradford, Vt., has been attached.

Geo. W. Cooper & Co., paper stock dealers, Aubnrn, N. Y., have sold ont.

Free Brothers, printers, Laconia, N. H., have been burned out.

W. D. Thompson, printer, Minneapolis, Minn., has sold out.

S. H. Cox, publisher of the *Transcript*, Dedham, Mass., has sold out.

S. A. Perry & Co., booksellers and stationers, Oakland, Cal., have sold out.

John H. Knarston, printer, San Francisco, Cal., has filed a petition in insolvency.

Penles & Mandi, wholesale dealers in notions, Chicago, Ill., have dissolved partnership.

F. H. Graham, bookseller and stationer, Kewanna, Ind., has sold ont to D. W. Seibert.

D. & J. O. Behyman, publishers of the Tipton (Ind.) *Times*, have sold out to E. A. Overman.

Farrington & Merwin, printers, of this city, have dissolved partnership. C. B. Merwin continues.

T. J. Crook, publisher of the *Courier*, Sherman, Tex., has sold out, the sale to take effect April 1.

The firm of John R. Hoole's Son, manufacturer of bookbinders' tools and machinery, New York city, has been changed to Hoole & Gorenfio.

Lambert S. Whittemore and James A. H. Magoon have been admitted to the firm of S. P. Croswell & Co., wholesale dealers in fancy goods, Boston, Mass.

Russell's blotting paper is made of full weight. It is a good absorbent, and is considered a standard make of blotting. Its low price will commend it to consumers.

Edward Evans, special partner in the firm of L. D. Sims & Co., paper box manufacturer, Montreal, P. Q., Can., has retired. Remaining partners will conduct the business under the same style.

The copartnership heretofore existing under the name of Bliss & Trowbridge, stationers' hardware, 133 William street, New York, has been dissolved. All accounts or moneys due the late firm are to be paid to S. A. Trowbridge, to whom everything has been assigned, and who will continue the business.

The statement that the English Chancery Court has refused to grant an injunction in the action brought by G. W. McGill to restrain the sale of the Novelty paper fastener is, it appears, incorrect. Mr. McGill, having given Holmes, Booth & Haydens the sole right to manufacture his patent single stroke staple press, announces his intention to prosecute all infringements.

The latest novelty brought out by Charles T. Bainbridge's Sons is a combination note circular, which they designate as No. 12. The flap is embossed to represent a plain bevel edge card pasted on. It has a butterfly in the corner of the flap with the words "Spring Opening" embossed on the card. They show an Easter card in the shape of an egg, colored, in assorted light tints. It will be fringed and painted on both sides, and hung by a tassel.

The details in making steel pens are inexplicable to the uninitiated. During the process of manufacture, which takes from three to four weeks, each pen is cut, pierced, slit, stamped, scoured and polished, ground twice, and subjected to the action of heat three times. In the final examination, the tests are severe enough to satisfy the most critical, the least imperfection in a pen causing its rejection. Thus is secured the luxury of a perfect pen. The leading numbers of business pens made by the Esterbrook Steel Pen Company are their 048, 14, 130, 333 and 161. Their reasonableness in price and estab-

lished reputation for quality specially commend them to the consideration of the writing public.

A. H. Goetting shows a fine line of mourning stationery.

Adam H. Ecker, publisher of the *Democrat*, Washington, Pa., is dead.

Nash & Fredericks, wood cut printers, Boston, Mass., have dissolved partnership.

A partner is called for in another column. The trade are invited to investigate.

Frank A. Culbert, of Culbert & Co., dealers in fancy goods, New York city, is dead.

R. H. Rowan, paper box manufacturer, Norwalk, Conn., has sold out to E. S. Trowbridge.

H. W. Simonton & Co., fancy goods dealers, Portland, Me., are offering their stock for sale.

Salisbury & Humphries, booksellers and stationers, Cobourg, Ont., Can., have been burned out.

K. R. Griffin, publisher of Franklin (Va.) *Gazette*, has been burned out. Loss $700; no insurance.

W. H. Waldron, of the firm of W. H. Waldron & Co., publishers of the *Gazette*, Lewiston, Me., is dead.

Franklin F. Russell, stationer at Lansing, Mich., has made an assignment to Chas. Carmel, of that place.

C. C. Clark, dealer in paper and mill supplies, New York, has removed from 98 Duane street to 85 Cliff street.

Copes & Bellows, bookbinders, Philadelphia, Pa., have dissolved partnership. George M. D. Bellows continues.

An experienced stationer wants to extend his trade and take a partner. His advertisement will be found elsewhere.

William M. Flanders, fancy goods dealer, Plymouth, Mass., has compromised at twenty-five cents on the dollar.

An advertisement in another column claims to present a "golden opportunity" for an enterprising stationer. Read it.

Mullin & Buckingham, publishers of the *Bedford County Press*, Everett, Pa., have sold out to the *Press* Publishing Company.

Thomas C. Newell has been admitted to the firm of Cary, Fulton & Co., wholesale dealers in notions, fancy goods, &c., Boston, Mass.

B. M. Dennis, dealer in paper hangings, Baltimore, Md., has admitted Freeborn G. Smith, of Brooklyn, N. Y., to partnership, under the style of B. M. Dennis & Co.

Wm. Nees & Son, stationers, Augusta, Ga., wish to correct any misapprehension which may have arisen through the statements of the Augusta correspondent of THE STATIONER. They assert that their trade has been exceptionally good and that their stock meets all demands. These gentlemen also forward the certificate of the clerk of the Superior Court, Richmond County, Ga., to the effect that there are no mortgages or incumbrances of any kind on the real estate of Wm. Nees, that there are no judgments against him, and that he is solvent and his credit is good.

Samuel Samuelson, dealer in fancy goods, Poughkeepsie, N. Y., was burned out on the 3d instant.

Lewis M. Evans and Charles Herger, under the style of Evans & Herger, have bought the stock, copyrights and business of the late firm of Martin Taylor & Co., at Buffalo, and will continue the wholesale and retail publishing, book and stationery business in all of its branches at No. 395 Main street, Buffalo.

Herman J. Kreinheder has retired from the Buffalo Paper Box Company, manufacturer of paper boxes, Buffalo, N. Y. A new partnership has been formed between Frank Knoblock and Henry E. Juengling, to continue the business under the same firm style.

THE STATIONER.

DEVOTED TO THE INTERESTS OF THE

Stationery and Fancy Goods Trades.

WEEKLY---$2.00 PER ANNUM.

Single Copies - - - - 10 Cents

NEW YORK, THURSDAY, MARCH 10, 1881.

Advertisements cannot be received for insertion in the current week later than 12 M. on Wednesday. The charge for advertising is 25 cents a line, each insertion. Special terms for standing and displayed advertisements to be had on application.

This journal aims to be a medium of information for and a representative of the interests of every one connected with the stationery and fancy goods trades. It contains a full and trustworthy survey of the market for stationery in this country, in all cases giving the actual prices at which goods can be bought of importers and jobbers in this city, together with a detailed account of novelties in the trade, patents relating to stationery, and current items of interest. A review of foreign markets and accounts of movements abroad will also be furnished, and no pains will be spared to make THE STATIONER a thorough and complete exponent of the trade.

Subscription and postage for Great Britain, per annum..... 12s.

Any information our readers may wish to obtain shall be cheerfully given, and prompt replies will be made to all inquiries addressed to us on any subjects of interest to the trade.

Communications on all trade matters are earnestly solicited. Address

HOWARD LOCKWOOD, Pres. and Treas.
American Stationer Association,
74 DUANE STREET, NEW YORK.

Subscribers to THE STATIONER can be supplied with the best cloth binder in the market. Deliverable at the publication office. Price, fifty cents.

Readers of this paper who avail themselves of the information obtained from its columns, by advertisement or otherwise, are requested to notify their correspondents of the source of their information.

PATIENCE is a virtue. We commend this principle to those who are grumbling at the weather.

GENERALLY, there is expectation of good trade this spring, and it is useless to complain because business is slow just now.

EXPECTATION will, we think, be followed by assurance, and when the spring movement has a chance to get fairly under way, unimpeded by natural obstructions, the stationery trade will probably find themselves in a whirl of business rush and prosperity.

A CORRESPONDENT intimates that there is an upward tendency in the prices of envelopes. We have not heard of it here, and do not know of anything to justify the statement. There is not, we believe, any alliance of the envelope manufacturers, and it is not thought that a combination is probable, although it may be possible. In fact, as has been remarked, the envelope trade is a "go as you please" affair just now. The same thing may be said of the blank book trade, in which there does not appear to be any unanimity of feeling, whatever the opinion may be, in the direction of an agreement for higher quotations.

THE taxation of commercial travelers has become the subject of wider newspaper discussion, and we have not found, as yet, any journal which justifies special taxation of this description. There may be, doubtless are, local sheets which will declaim in support of such exactions, but dispassionate judgment will, we are sure, condemn them in every instance. Certainly we do not, nor ought any one, object to a license which is not discriminating in its nature. If a merchant living in one place has to pay for the privilege of conducting his business there, the commercial traveler or foreign merchant cannot justly claim or ask to be exempt from the same condition. The position we have taken on this issue is entirely fair—certainly intended to be so—to every interest. We sympathize with merchants who have cause to complain that the "drummers" sell to people outside of their own line of trade, aud we have already pointed out how to meet such people. As a matter of policy, special taxation is opposed to the development and increase of trade, and it is apparent that the missionaries of commerce who extend their efforts to the most inaccessible places bear a large part in establishing the growth and aiding the development of business.

ANSWERS TO CORRESPONDENTS.

G. W. B. asks the name of the New England firm manufacturing rubber headed tacks.

Ans.—We have not been able to secure the name and address.

J. C. B. says: Please advise me who builds the best envelope machines at the most reasonable prices?

Ans.—Our correspondent asks us too much. We cannot assume to decide what are the best machines without a practical knowledge of them, and as for prices we must leave that to his own decision. M. A. Reay & Co. and Berlin & Jones, New York, and W. H. Hill, Worcester, Mass., make and supply machines.

OBITUARY.

BENJAMIN OLDS.

Benjamin Olds, aged ninety-two years, one of the oldest booksellers and publishers in America, died at his home in Newark, on Tuesday night. Deceased was a native of Connecticut, and went to live in Newark in 1816. He published in his day a large number of school books, which were popular in New Jersey and Pennsylvania; also the "Scottish Chiefs" and a very popular almanac.

THE MELBOURNE EXHIBITION.

SIGNAL SUCCESS OF AMERICAN PAPER MAKERS.

Advices just received by the *Paper Trade Journal*, dated Melbourne, January 25, record a great triumph for American paper makers. The following firms all secure the first award of merit over all others: Holyoke Paper Company, Holyoke, Mass., writing and bank note paper; Crane Brothers, Westfield, Mass., ledger paper; Bird, Hollingsworth & Co., East Walpole, Mass., hardware and sand paper; Case Brothers, South Manchester, Conn., press boards; W. O. Davey & Co., Jersey City, N. J., binders' boards; Scott Paper Company, Philadelphia, water-proof paper; Peter Adams, Buckland, Conn., book paper, and Albion Paper Company, Holyoke, Mass., for super-calendered book paper, and second degree of merit on writing paper. Among eleven American exhibitors in this class, eight received first order of merit, and four the second. Thus the victory achieved at Paris and Sydney by American paper makers is repeated at Melbourne.

Among the visiting members of the trade in this city during the past week were N. Bangs Williams and Mr. Tibbitts, of Tibbitts & Shaw, both of Providence, R. I.; Andrew Boyd, of Alex. Buntin & Son, Montreal; C. P. Moser, of Moser & Lyon, Syracuse, N. Y., and William Bryce, London, Ont.

Among the members of the trade who visited the city during the week were William Hogan, of Hogan & Co., Louisville, Ky.; Mr. Boyd, with Alexander Bunton, Montreal, and William Bryce, London, Ont.

CHICAGO NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

WESTERN OFFICE LOCKWOOD PRESS, NO. 8 LAKESIDE BUILDING, CHICAGO, Ill., March 7, 1881.

The spring trade here is now thoroughly under sail. Most of the houses have their men upon the road, and all incoming reports are fair—so fair that one of the noble family of "drummers" recently remarked, in the course of conversation, that "The salesman who couldn't coin money this season ought to give it up and take to journalism." Not very complimentary to the latter craft, but still very expressive.

This morning, bright and early—in fact, "up with the lark"—H. A. Taylor started with "scrip and staff" for the South and West. He will be gone about one week only, as the increasing demand for the Livermore pen requires him almost constantly at home. This trip, however, is only the first of a series of flying journeys hither and thither in the interests of the pen; and if prognostications be of any value, every trip he makes will score a "ten strike"—not to be *too* funny, I may say that "every time the pen draws it *fills!*"

Culver, Page & Hoyne's men are all out, sending back cheerful and "solid" reports, in the way of orders.

Hulse, Spencer & Co. have been represented in Michigan and Indiana during the week past by Mr. Hulse, whose reports home have left nothing to be desired.

If our Western houses are active, the Eastern firms are not a whit behindhand.

L. Prang & Co.'s representative, A. J. Clark, called at this office the other day, his face wreathed in such smiles that I did not need to put my usual question, "How is business?"

From your correspondent at Detroit, a note today received contains the following pleasant item: "The business of the Lockwood Press Printing and Publishing Company is on the 'grand boom' now." This being so, what need of further assurance as to the solid state of business in the West.

Not behind the times is the United States Ticket and Tablet Company, from which I have just received a sample of its cut leaves and other fancy card designs. While these cards are not intended to rival the expensive chromos of some Eastern houses, nothing has yet been invented or designed, according to my way of thinking, that can rival them at once in cheapness and uniqueness. As a striking and attractive form of business cards they have not been surpassed.

Skeen & Stuart are now compactly and conveniently situated. Their printing office, lately at 102 Madison street, has been removed to one of the two upper stories of the building occupied by their general store, 77 Madison street. It is larger and more fully equipped than the old office. J. G. Smead's bindery, run in connection with this office, has also been transferred to the same building.

A new imitation of the "Burlington" file is a threatened possibility. Between them all, things will probably "hum." G. B. H.

ACID PROOF CEMENT.—How to make paste or cementing material that is proof against fumes—like those given off in the preparation of silver nitrate, for instance—is well worth knowing. Finely powdered glass, mixed with soluble silicate of soda, will give a material of this description.—*Boston Journal of Chemistry.*

R. Loforte, 965 Sixth avenue, New York, designer in art furniture and decorations in fresco paper hangings, has prepared some handsome samples of hangings which invite attention.

PUBLIC PRINTING.

A comparison of the last reports of her Majesty's stationery office and of the public printer of the United States affords some interesting contrasts. It will, however, be understood that the parallel is not in all respects a perfect one for reasons which will appear. The gross expenditure in the English office was £563,377, and in the American a little over $2,000,000. In the English accounts, however, there is no item corresponding to the charge of $130,000 for the *Congressional Record*, as in England the newspapers are relied upon to furnish detailed accounts of debates. On the other hand, the item of stationery (£201,730) has no similar entry in the American report. For 100 years the stationery office has furnished all the departments all the supplies coming under that head, and it was only in 1823 that printing was added to its duties. The annual charge for printing ordered by Parliament is £36,000, and, measured by weight, amounted to a ton for each member of Parliament. The number of pamphlets and documents printed for Congress was over 17,000,000. The English office realizes £10,000 per year from the sale of waste paper. Formerly it used to be sold to a contractor, who was bound to reduce it all to pulp to preserve the government's secrets, but now it is torn to little bits in the prisons and sold in the open market. Both offices are charged with the publication of handsome and expensive works. Our geological and geographical surveys and teacultural department reports are matched by the "Challenger Survey," in fifteen royal quarto volumes, the "Doomsday Book," which costs £20, and the "Descriptive Accounts of Sinai and Jerusalem" (one can scarcely imagine how *these* came in the list), which cost £22 and £12 12s. respectively. The income from the sale of books was £20,000. The method of fixing the price is especially worthy attention just now, when the matter is being discussed here. The net cost of production is divided by the number of copies printed, and the quotient is increased by one-half, which is equally divided between the office and the booksellers. But Parliamentary reports are sold at the bare cost of paper and printing, not even the type-setting being charged for. It would be as hard to find substantial objection to this as to find anything to approve in our system. Here, in practice, any one wishing a government publication goes to a second hand dealer and pays, say 25 cents, for a *Globe* or *Record* which cost the government some $2.25. Of the 1,900 copies of each executive document, that being the standard edition, at least one-half are never even bound, and on an average three-fourths are finally sold by the pound. Such waste is wanton, as well as wicked. Hundreds of public libraries have more shelf-room than books, and it would be better to give them the books outright But in the face of the English precedent it cannot be doubted that sale could be made of many books to good account if our laws did not impose nearly iusuperable objections. Now, a person wishing to buy a book of the government must pay his money (10 per cent. above cost) before the book is issued. Nothing could be more ingeniously bad. As the government does not advertise, it is nearly impossible to know what documents are going to be issued, and even if the title were known, that alone is scarcely sufficient to induce the payment of money without a single glimpse of what is between the covers. Moreover, there is no central distributing office, and the waste paper fiends gobble up gratis a copy in each of half a dozen places, while the dear public, which pays the bills and would appreciate the books as books, cannot get a copy for a price.

INK FOR LABORATORY USE.—A German pharmaceutical magazine gives the following recipe for a fine black ink, which flows easily from the pen, and may be used in laboratories, drug stores, &c., for labeling objects which are liable to get wet, or for producing writing which will resist acids and caustic liquids: Twenty grs. of brown shellac are dissolved in a warm solution of 30 grs. of borax in 300 to 400 grs. of water and filtered hot; to the filtrate is added a solution containing 7.5 to 10 grs. of water-soluble nigrosin, 0.3 gr. tannin, 0.1 gr. picric acid, 15 grs. water of ammonia, and 7 grs. of water.—*Boston Journal of Chemistry.*

Market Review.

OFFICE OF THE AMERICAN STATIONER, WEDNESDAY, March 9, 1881.

THE MONEY MARKET.—The monetary situation as contrasted with the previons week was characterized by ease, and brokers offering acceptable collateral found ready accommodation at fairly reasonable rates. The great bulk of the business was effected at about 6 per cent. The requirements of the government bond dealers were supplied at 5@6 per cent., some few transactions, however, being reported at a small commission. Time loans, 60 days, were made at 5@6 per cent. In the discount market, prime mercantile paper sold at 5@6 per cent., the business being light in volume. The government bond market was strong throughout the eutire week, and became quite buoyant after the President's veto of the Funding bill. The improvement in prices on the week's transactions is 1 per cent. in 6's, 5/8 in 5's, 3/4 in 4½'s, and 1 per cent. in new 4's. Railroad mortgages were fairly active, and fluctuated in sympathy with the share speculation. Most of the leading issues were bought freely at advancing quotations in the late dealings. The foreign exchange market was irregular, pending the uncertainty about Treasury action, on which the condition of the money market depends. Commercial bills are not plentiful. The actual closing rates were 4.80@4.80¾ and 4.82@4.82¾. Cable transfers, 4.82½@4.83, and prime commercial, 4.78¼@4.78¾.

THE PAPER MARKET.—The business among our city dealers has progressed this week with very little animation. The impediment to transportation in the West has been a considerable drawback to trade with that section, and accounts in some measure for the pancity of business, as many orders are held back in consequence. Stocks of goods in the interior must have become materially reduced, and when the facilities for movement resume their normal condition there cannot fail to be a decided impulse to the demand. The situation with the mills is still active, most of them having as much as they can do, and very few show any disposition to take additional orders unless for delivery some months in the future. We hear of instances where manufacturers are importuned by their customers for the delivery of goods ordered, which they are unable to do on time, owing to the pressure of business. Prices show no appreciable change, and for nearly all grades are steadily held, aud firm for book papers. There is no feature of interest attaching to any particular grade, and, generally speaking, the situation is about the same as that of a week ago.

THE STATIONERY MARKET.—In the line of staple stationery, business is still slow, yet taking the weather and other drawbacks into consideration, there is a fair trade doing, and very little grumbling comes from any direction, except from that class of chronic growlers who are never satisfied, whatever the condition may be. The Easter card business is about the only line showing auy great activity. The sales of these are still very large, and some houses are so encouraged by the business that they have added several new designs to their selections. We do not hear of the arrival in town this week of many country buyers, but with more settled weather an impetus ought to be given to trade, and in the course of the next week or so we hope to be able to report some improvement. As regards prices, we hear of no changes being made.

SOLE AGENTS FOR THE UNITED STATES OF

Aug. Leonhardi's (Dresden) Celebrated Alizarine Writing and Copying Ink.

THIS Ink combines the qualities of a Writing and Copying Ink in a manner unsurpassed by any other make in the market. As a Copying Ink it will make a distinct copy even several days after, and if required two clear copies can be taken. As a Writing Ink it excels for its intense blackness. It never fades, nor does it blur. **It is used in all Government Offices on the Continent of Europe**

We are enabled to quote this Ink far below the prices of other Copying Inks.

☞ Publishers of **SOUVENIR ALBUMS**, of all the larger cities of the Union, of Places of Summer Resort, and of Celebrated Sceneries.

ILLUSTRATIONS IN ENGLISH AND AMERICAN MAGAZINES.

A few months ago we took occasion to point out in these columns some of the defects of American wood engraving, and the influences which the mistaken laudation of the transatlantic school, by certain prominent journals in this country, and notably the *Saturday Review*, might possibly have upon the illustrations in English publications. We gave pretty good grounds for our opinion that the adoption of the peculiar style of engraving familiar to us in the pages of *Scribner* was, from an art point of view at least, a step in the wrong direction, and that in spite of its neatness, fineness and pleasing appearance, American is inferior to the best English work in the older style. Since our previous article appeared, the invasion of this country by transatlantic illustrated magazines, and their evidently friendly reception, has become more marked than ever. *Harper's Monthly* has arrived to share the spoil with *Scribner*, and the *American Art Review* affords in many ways attractions which must be ranked superior to those of our time-honored, but somewhat lackadaisical, *Art Journal*, though, under its new management, it certainly does promise to be a little more enterprising than heretofore. Remarkable as this invasion is, however, we see nothing in it for reasonable objection. What concerns us most is that several of our popular magazines have commenced to copy all the tricks of the American method, without, however, so far as we have yet seen, producing anything that can equal the illustrations in the publications we have named. There is a great demand in this country for these periodicals. So long as our publishers are content to continue on their present course, that demand is likely to still further increase, and it is by no means impossible that by and by we shall find the Americans have pretty well cut the ground from under our feet. It appears to have been thought that by imitating the Scribnerian style—if we may be allowed the term—English magazines might be better able to cope with their Yankee competitors. At first sight this seems a shrewd plan; but if it be carefully examined its shrewdness disappears, and leaves in its place a somewhat sorry shortsightedness. It has been forgotten that the excellences of the American engravers are the results, so to speak, of years of grinding in a single groove. To expect, then, that English engravers should suddenly turn round, and on the spur of the moment abandon their traditions and produce work in a foreign style which could compete on equal ground with the finished specimens which they strove to imitate, was to expect a sheer impossibility. Yet the experiment has been confidently tried, with the natural result of failure. We do not recollect seeing anything so deplorably bad, and at the same time so pretentious, as the recent illustrations in some well known magazines that we could name, which have apparently laid themselves out for servile copying of the American style, and have succeeded only too well in illustrating its crudities and errors, while not one of its good points have they been able to reproduce.

But if it has been forgotten that the perfection of the cuts in *Scribner* and *Harper* is, and could only be, the outcome of years of experience in a particular line, it has also been forgotten that one-half of the beauty and pleasinguess of those cuts is the result of the careful printing and the splendid paper for which America is notorious. It is not too much to say that but for these advantages neither of these magazines could have

attained to the high position which they now hold in the opinion of the world. And these advantages can scarcely be over estimated. The best engraving that was ever cut would be unsatisfactory in the highest degree if badly printed, and, with one or two exceptions, our magazines fail in this more conspicuously, perhaps, than in any other respect. It folllows, then, that even if we succeeded in producing engravings equal in delicacy, fineness, and carefulness to those in the two leading American periodicals, it would be to very little purpose unless we also discovered the secret of this printing, and could produce paper as beautiful as theirs. There is not much profundity in the secret after all, and we gladly make a present of it to English publishers—if, indeed, they do not already know it. It is simply a question of expense. Good printing means perfect machinery, time, and great care, which means money. Good paper means money, also; and the matter resolves itself into this: that if we will only go to the necessary expense we can produce a magazine equal in many respects to any the world has yet seen, and, in point of illustrations and letter-press, far superior to the world-famed *Scribner*. We possess the finest wood-engraving talent in the world; our draughtsmen are far and away better than American—and in saying this we do not underrate the undeniable merits of the work of American artists—merits which we fully appreciate and are glad to see increasing—and we think that it will be admitted that English writers are quite as capable as their brethren of the pen on the other side of the "herring-pond." If we failed anywhere it would be in the printing, for the art is understood by a few only. But if anything is to be done it must be done liberally and boldly. There must be no slavish imitation in the illustrations, for the American style is bad in art, however pleasing it may be to the popular eye, and to follow it is to take a backward instead of a forward path. It should be remembered that England has produced, and that, too, in recent years, some of the finest examples of the wood engraver's skill, though perhaps they are not valued at their true worth, and that it is but too easy, in attempting to imitate a prettiness that pleases the multitude, to lose that breadth, simplicity, and power which are the elements of true art, and which have certainly until now distinguished the English school.—*The Examiner, London.*

The Bible used by Martin Luther in making his translation has recently been discovered in a village of Bohemia. It is covered with marginal notes in handwriting. It formerly belonged to the Royal Library at Dresden. The possessor has been offered $750 for it by the University of Leipzig, but has refused the offer.

"THE GREAT ROCK ISLAND ROUTE"

Calls your attention to the following REASONS WHY, if about to make a Journey to the GREAT WEST, you should travel over it:

As nearly absolute safety as is possible to be attained. ure connections in UNION DEPOTS, at all important points. No change of cars between CHICAGO, KANSAS CITY, LEAVENWORTH, ATCHISON or COUNCIL BLUFFS. Quick journeys because carried on Fast Express Trains. Day cars that are not only artistically decorated, but furnished with seats that admit of ease and comfort. Sleeping cars that permit quiet rest in home-like beds. Dining cars that are used only for eating purposes, and in which the best of meals are served for the reasonable sum of seventy-five cents each. A journey that furnishes the finest views of the fertile farms and pretty cities of Illinois, Iowa and Missouri, and is afterwards remembered as one of the pleasant incidents of life. You arrive at destination rested, not weary; clean, not dirty; calm, not angry. In brief, you get the maximum of comfort at a minimum of cost.

That the unremitting care of the Chicago, Rock Island & Pacific Railway for the comfort of its patrons is appreciated, is attested by its constantly increasing business, and the fact that it is the favorite route with delegates and visitors to the great assemblages, political, religious, educational and benevolent, that assemble from time to time in the great cities of the United States, as well as tourists who seek the pleasantest lines of travel while *en route* to behold the wonderful scenes of Colorado, the Yellowstone and Yosemite. To accommodate those who desire to visit Colorado for health, pleasure or business, in the most auspicious time of the year, the Summer season and months of September and October, the Company every year puts on sale, May 1st, at all coupon ticket offices in the United States and Canadas, round trip tickets to

DENVER, COLORADO SPRINGS AND PUEBLO,

At reduced rates, good returning, until October 31st. Also to San Francisco, for parties of ten or more, good for ninety days, at great reduction from regular fares.

REMEMBER, this is the most direct route for all points WEST and SOUTHWEST. For further information, time-tables, maps or folders, call upon or address

ORIGIN OF THE TERM "HORNBOOK."

Everybody knows that Hornbook is the name given for the primer; bnt why the first book used in learning to read is so called is not so generally known. Perhaps there is not one in a hundred who knows it. Dr. Johnson, who knew of the custom and whence it originated, for the custom was in vogue during the whole of his life, explains it in his dictionary as "First book of children covered with horn to keep it unsoiled," which is not very clear to the ideas of people living in the Victorian era. Wright, in his Universal Pronouncing Dictionary, which, on account of its size and price, is not very accessible to the general public, explains it thoroughly, as "The first book of children, or that in which they learn their letters and rudiments; so called because it consisted of a page of printed paper placed on a piece of wood, and covered with horn."

The term arose from the fact that in England, from the time of Elizabeth until nearly the close of George the Third's reign, the primer in common use consisted of a single sheet of paper printed only on one side, which was fastened upon a board and covered with a transparent sheet of horn to preserve the paper from destruction. In order that it might be easily held by the child, it very frequently had a handle attached to the board, in which case it bore the resemblance to a rude paddle.

There were sometimes "hornbooks" in which the letters were actually cut or engraved on horns.

One of the hornbooks preserved from the period of the Restoration consisted of the following rudiments: The alphabet, a table of a, b, ab's, and the Lord's Prayer.

THE SCOPE OF ART.

A great many people speak of art as if it was something quite outside their own practical lives—something to be seen in museums and picture galleries, but with which ordinary men and women can have nothing to do. They speak as if it were a special possession of the very wealthy, and as if all knowledge about it were confined to a small skilled body of artists and critics. In reality, no idea could be further from the truth. A writer observes that art exists all around us on every side, and enters into every detail of our everyday life. The first savage who ever carved a wooden club or a cocoa nut drinking cup, who ever strung cowries into wampum, or arranged feathers into a headdress was, in fact, an artist—a very rude and primitive artist, no doubt, but still an artist none the less. Whenever a man in making any tool or vessel for common use adds to it anything, in color, form or detail, not needed for practical purposes, but put in for the sake of ornament alone, there art begins A plain earthenware bowl is an object for simple use; but if it be glazed with a white glaze, and then painted with a red or blue line, or a bunch of rude flowers, these purely decorative additions are art in the germ. Look around the room in which you live and you will find artistic touches everywhere—in the paint on the door, in the figured paper on the wall, in the pattern of the carpet, in every chair, table, lamp, cup or plate with which you have to deal in your daily doings. It may be a good art or it may be a bad art, but it is an art all the same in either case.—*London Pottery Gazette.*

The misfortune is that men despise what they may be masters of, and affect what they are not fit for.

THE COSMOGRAPH.

M. Riviere, of Marseilles, France, is to be credited with a capital idea of popularizing astronomical knowledge through the medium of a simple monument, which may be set up in public squares, private grounds, or any other convenient locality. Several have already been erected in French cities.

The cosmograph, as the invention is called, shows, first, by a vertical circle, the plane of the meridian. A rod, directed towards the polar star, passes diametrically through the circle, and shows the position of the earth's axis. A circle placed at right angles to the first, indicates the plane of the equator. Of course, the inclination of the axial rod varies according to the latitude of the locality. A small rod, placed vertically above the meridian circle, shows the zenith. Four other arms, fixed 23° above and below the equator, mark the tropics, and four more, placed at the same distance from the points of intersection of the axis, mark the polar circles. The graduation comprised between the tropics allows of the sun's movement in declination being followed, the solstices and equinoxes being observed, and the succession of seasons noted. The equator, divided into degrees, and receiving the shadow of the axis, becomes a sun dial, an arc of 15° counting one hour. After a little practice it is easy to refer the curves of the cosmograph to the heavens, when the principal constellations may readily be found, especially those of the zodiac, through which passes the plane of the ecliptic or annual apparent path of the sun.

Inscriptions in relief show the names of the various portions of the instrument, and several useful astronomical facts and data are engraved on the pedestal.

AMERICAN TOBACCO AT THE MELBOURNE EXHIBITION.

Special and confidential advices to the *American Mail and Export Journal*, dated Melbourne, January 25, report a great victory for American manufacturers of tobacco, cigarettes, &c. Four exhibitors from the United States have obtained six prizes of the first order of merit. This is the more satisfactory as the local and foreign competition was powerful. The following were the successful exhibitors: T. C. Williams, Richmond, Va., plug and twist tobacco; William Cameron & Brother, Petersburg, Va., and J. A. Cameron & Co., Richmond, Va., plug and twist tobacco; W. S. Kimball & Co., cigarettes and smoking tobacco; Allen & Ginter, Richmond, Va., cigarettes. This last firm and W. S. Kimball & Co. also secured second prizes of the first distinction. Tobacco and its manufactures form one of the most important articles of importation in the Australian colonies, and our manufacturers are securing a good share of the trade.

QUADRILLE PAPERS.

THE PAPER TRADE IN THE CITY OF NEW YORK.

[Continued.]

In a recent article of this series reference was made to the connection of Coe S. Buchanan with the manufacture in this country of white paper from straw. Since the publication of the article referred to the writer has been able to see Mr. Buchanan, who is an invalid, and obtain from him a detailed account of the inception of this important industry. The following narrative is given as nearly as possible in Mr. Buchanan's own words.

The first white paper from straw put on the market in this country was made in 1853 by John and David Ames at their mill in Springfield, Mass. It was too harsh and transparent for printers' use, and was utilized chiefly for wrapping paper and for covering card board in making paper boxes. This paper was made under the patent of Mellier, who two or three years before had succeeded in producing a very fair printing paper from straw at his mill in France. In 1852 he established works in England, having secured a patent in that country as well as in France, and he also made a contract about the same time, or subsequently, with the Ames to take out a patent in this country, and employ the process at their mill. The process was known as the Coupier and Mellier patent. The late Joseph B. Palser was sent from England by Mellier to superintend the works at the Ames mill, and the paper referred to at the outset was produced. As that, however, was not satisfactory Mellier came to the United States, and finding the arrangements of the Ames mill defective, and the firm financially embarrassed, he revoked the contract and stopped the use of his processes there.

After many fruitless applications to manufacturers and others he succeeded in making arrangements with Phranor & Nixon, of Manayunk, Pa., mainly on account of the favorable opinion of the value of the process expressed by Mr. Swayne, then the proprietor of the Philadelphia *Ledger*. Phranor & Nixon began in 1854 to make paper for the *Ledger*, chiefly from straw pulp with a small percentage of rags; but for several years the quality was not such as to command the general market.

Late in 1855 the manufacture was begun at Rock City Falls, N. Y., by Coe S. Buchanan and Chauncey Kilmer, under the firm name of Buchanan & Kilmer, who made about the same quality of paper as the Manayunk mill. This paper had few friends and was condemned alike by operators in the paper mill and press room. It was difficult to make and more difficult to sell. At length Moses S. Beach, of the New York *Sun*, was induced to try the paper made by the Rock City mill, and the product of that mill has been used by the *Sun* ever since. These were the only mills worked under the Coupier and Mellier patent—the novel features of which were the employment of caustic alkaline solution, after the lime was precipitated, the solution being heated, without dilution with steam, and sprinkled upon the straw at the highest temperature attainable in a tightly closed tube. The great strength required in both the alkaline and chlorine solutions produced a harsh transparent paper.

Mellier came to teach the Americans how to make white paper from straw, and found them in advance of the English and French in the lower grades of stock—a fact mainly due to the Spofford or rotary boiler, then quite common here but not in Europe. At all events he first learned its merits here. After his return to France in 1854 a series of experiments resulted in his taking out a patent for an improved process. The date of the French patent was August 7, 1854. Subsequently C. S. Buchanan purchased a Coupier and Mellier patent, and made a contract to obtain for Mellier the United States patent for his improvement. This was issued May 26, 1857, and was then assigned to Mr. Buchanan. In this new patent Mellier, adhering to the idea of Coupier and Mellier, kept the alkaline solution from being diluted in the boiling process, by providing his rotary boiler with a steam jacket outside or coils of pipe inside. His claims also covered the use of an alkaline solution of a strength from 2° to 3° Baume, at a temperature indicated by seventy pounds to the square inch and upwards.

In May, 1856, Mr. Buchanan sold out his interest in the Rock City Falls mill to Chauncey Kilmer, who then became sole owner. Mr. Palser soon afterward, in conjunction with Gardner Howland, began at the Fort Edward mill to prepare for the manufacture of white paper from straw by a method intended as an improvement on Mellier's. Palser's relations with Buchanan were such that he was informed from time to time of the improvement. At the Fort Edward mill the alkaline solution was kept from dilution by an envelope of brick work, and heat was supplied by a fire underneath the boiler. This was Buchanan's idea, and a patent was issued to him in 1858. Several improvements, the results of suggestions and experiments made by Howland, Palser and Buchanan, were to be patented in the name of the two former, the latter approving and actively assisting until the others showed a disposition to ignore Mellier's patent. Howland and Palser, who had obtained good results by boiling under a pressure of 110 to 130 pounds to the square inch, claimed that as not only an improvement on Mellier's but also an independent discovery, and succeeded in getting a patent, and induced several manufacturers to take license under them.

Buchanan began suit for infringement against them in the United States courts in 1860, and obtained judgment on March 25, 1863.

"Soon after the issue of Mellier's patent," continued Mr. Buchanan, "many others were taken out by persons in England and this country. I think that Howland & Palser were the first to make a claim that boiling at high temperature was their discovery. A reissue of the Watt & Burgess patent made, however, a bolder strike to supplant Mellier. The original patent distinctly disclaims boiling at a high temperature, but the reissue claimed the whole field from 10 pounds less than Mellier upwards. The various discoveries during these years, when examined as to dates and circumstances, are as remarkable coincidences as the upsetting of the elder Weller's stage coach. It is curious to note in these and among other instances how under different names and forms the old idea was revived in the disguise of a new invention.

"Lime was commonly used in boiling paper stock prior to 1857, and nearly all of the published processes for reducing straw, wood and other crude materials recommended its use. Thus its efficacy was well known, as was also the fact that heat increased the action of the alkaline. But it was not known that the use of lime in boiling, or its presence in a free state in the solution of caustic alkali, would make the after bleaching impracticable. This was Coupier and Mellier's discovery. Mellier discovered that a caustic alkaline solution of 2° Baume, about 60 gallons to 100 pounds of straw, at a temperature of 310° Fahrenheit maintained for about four hours, would prepare straw for the subsequent process required to make white paper. This principle has not, I think, been materially changed in practice up to the present time, but the after treatment has been greatly improved. The mistake of the first mills was in mixing as little as possible of rag stock with the straw fibre. In fact most of them lacked the means of preparing the rags. After 1857 the number of mills making white paper from straw rapidly increased, all of them boiling at high temperatures. The product of the mills has also been largely increased. In 1860 the total was about 10 or 12 tons per day. What is it now?

"The only noteworthy attempt to make white pulp from wood by chemical means was made at Rogers Ford, Pa. I have not the date when work was begun there, but like the workers on straw, the persons concerned succeeded in making a fair paper only after Mellier's invention was published. In the early part of 1863 the American Wood Paper Company was organized, and it bought these works together with a large number of patents, including those of Watt and Burgess, Keene, Coupier and Mellier, Mellier, Buchanan, and Howland and Palser. It also erected extensive works at Manayunk, Pa., for the manufacture of wood pulp. The capacity of both mills was about 15 tons per day."

FOLEY'S

Celebrated Gold Pens and Pencils

THE FINEST AND BEST.

CIRCULAR.—To those engaged in mercantile pursuits, any invention that will facilitate their labor is highly worthy of notice, as well as of extensive patronage. One of the most important inventions of the present age is that of a pen that possesses the necessary qualities of firmness in mark and durability in use. Pre-eminently such are those of JOHN FOLEY, Manufacturer of Fine Gold Pens and Pencils, No. 2 Astor House. Their superior value is tested by the long time he has been engaged in our city in their manufacture. We, the subscribers, who know the value of FOLEY'S PENS from constant use of them for a number of years, cheerfully recommend them to those who wish for the best and most perfect Gold Pen ever made.

BYRON WESTON

DALTON, MASS.,

HAS BEEN AWARDED THE

GRAND PRIZE GOLD MEDAL

AND RECOMMENDED THE

Medal of Honor and Perfection

At PARIS, 1878,

This being the **HIGHEST and ONLY AWARD** given for

LINEN RECORD and LEDGER PAPER.

—A SPECIALTY.—

THIS Paper has received THE HIGHEST PREMIUM over all others from *the Cincinnati Industrial Exhibition*, *Massachusetts Charitable Mechanics' Association*, *Franklin Institute* of Philadelphia, Louisville Exposition, Medal and diploma from *United States Centennial Commission*, *Medal of Progress American Institute*, *1877*, *and Medal of Improvement and Progress*, *Boston*, *1878*. Its

PRINCIPAL ADVANTAGES

are as follows:—1. It contains more LINEN than any other Ledger Paper, has a longer fibre, and is, consequently, tougher. 2. Having a harder and better body, it frays less in erasure, so that by simply using the rubber after the eraser, the ink is prevented from spreading. 3. It is more uniform in Weight Color and Finish. 4. It never cockles if properly bound. 5. Its chemical action upon ink is such that it both writes and rules up better. For proof of the foregoing, refer to a large number of Stationers, Bookbinders, Bookkeepers, and Recorders, who have given it, after a severe test, the preference over all others. This paper is *Double Sized*, and will stand any climate or the most acid of fluid inks.

☞ **Send for sample sheet, ERASE and REWRITE FOUR TIMES on same spot.**

Each sheet is water-marked with name and date.

The American Stationer

A JOURNAL DEVOTED TO THE INTERESTS OF THE STATIONERY & FANCY GOODS TRADES

REDMAN & KENNY, N.Y.

"The Stationer"—Every Thursday—$2.00 Per Annum.

VOL. IX.---NO. 11. NEW YORK, MARCH 17, 1881. WHOLE NO. 299.

...IVED LIBRARY. 1881 ...T OFFICE

Correspondence.

BOSTON NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

BOSTON, Mass., March 14, 1881.

Stationers report a very fair business during the past week, notwithstanding the inclement weather. Buyers seem to have got out of patience with the weather clerk, and to have come to the conclusion that business is business, rain, snow, shine, mud or what not. It is also getting pretty well along into the spring, and goods must be had.

The closeness of the money market, the rates between the banks having prevailed at from 7 to 10 per cent., has tended to affect the volume of general trade here during the past month, but an improvement in the market is now looked for. The phenomenal activity in speculation, anent Mexican mining schemes, &c., continues here, but the end is not yet. The stationery trade, I am glad to know, is not engaged in outside speculations.

The card mania continues, and School street is the headquarters of the business. It is astonishing to what an extent this business has grown. Every "fresh invoice" seems to set some people crazy—those engaged in collecting cards

Our leading stationers intend to make a fine show of goods in both the exhibitions that are to be held in this city during the coming season. applications for space having already been made. Their displays will be unusually fine, on account of the apparent rivalry between the Massachusetts Charitable Mechanics' Association, of many years' standing, and the New England Manufacturers' Association, an institution organized during the past year. Both of these associations are erecting model exhibition buildings, on the Back Bay, at the South End, that of the latter covering more ground than any similar building in the country.

The old Dutch pictures of the seventeenth century, from the San Donato collection in Florence, on exhibition at the Museum of Fine Arts, are attracting special attention. A collection like that of Prince Demidoff's is not broken up every year.

The booksellers report an unusually good trade during the past month. The books mostly in demand have been light literature and standard works. The Riverside Press is busy in printing dictionaries, the poets and such.

The printing and stationery at the Boston post office cost $15,484 in 1880.

By the means of the heliotype process, a portfolio of charming pictures can now be bought for the price of an ordinary steel engraving.

"Lockwood's Directory of the Paper and Stationery Trades," the only standard work of the kind published, is indispensable, and no stationery house can afford to be without it. It is invaluable to all wishing to reach the smaller trade, and $2 are little enough for it.

Carter, Dinsmore & Co., whose mucilage, fluid and inks have become so justly popular, report a busy season. The goods of this house go into every section of the country. Lockwood, Brooks & Co. and William A. Davis & Co., also dealers in the same line of goods, report good sales.

The inimitably engraved cards emanating from the celebrated establishment of John A. Lowell & Co. are to be found wherever there is taste shown in the purchase of such goods. At all the leading clubs the cards and steel plate engravings of this house are to be seen, and the specimens thus produced and furnished are eagerly kept as elegant reminders of the occasion which they suggest. The Boston establishment of this firm is always pressed with orders.

I had almost forgotten to state that the Sewell Manufacturing Company is now furnishing the trade with a superior adhesive mucilage, and its standard writing and copying inks are becoming very popular.

A run among the stationers convinced me that an excellent feeling exists in the trade all around, and that all this is now needed to produce a degree of activity is settled weather, which is not afar off.

There have been visits from gentlemen representing the trade in New York during the past week, and they have not returned orderless.

Disaster has come to Tileston & Hollingsworth's paper mills, which were entirely destroyed by fire on Sunday morning last. Loss, $75,000; insurance, $45,000. These mills, located at Hyde Park, were the best appointed of their kind, and were doing a large business. They will be immediately rebuilt.

Country customers report the roads in a very bad condition, interfering seriously with trade.

L.

CINCINNATI NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

CINCINNATI, O., March 14, 1881.

The Hub of the Mississippi valley, which, being interpreted, is Cincinnati, is furnishing the world not only with the letter press, &c., of books, but with writers. The following extract from the *Nation* will show in what esteem a recent work is held by a competent critic:

"Professor James Morgan Hart, of the University of Cincinnati, has published a syllabus of Anglo-Saxon literature, adopted from Bernhard Ten Brink's 'Geschichte der Englishen Literatur.' He has succeeded in bringing within sixty-nine pages a very good summary of the principal, interesting and important facts of his subject. Without any parade of learning, we have the latest results of it clearly set forth—much of it for the first time in English. The syllabus is a reliable and very convenient addition to our scanty apparatus for the study of Anglo-Saxon literature."

Robert Clarke & Co. are publishing the work.

Manufacturers and dealers are looking for a good spring trade. An unusual winter has made January and February dull months by its severity, and March thus far has been inauspicious. Prices hold firmly, however, and show no indications of changing.

Manufacturers are busy, but those doing mercantile manufacturing commenced late on account of the mercantile houses holding back orders with the hope Congress would abolish the stamp tax on bank checks. By the way, all bank checks have to be sent to New York, to receive the government stamp. A prominent Cincinnati manufacturer complained to me bitterly about this and about the charges of the New York Lithographing Company for printing. He said: "Ten reams, 4,800 sheets, cost us in New York, where we are obliged to send them, $48 for printing; whereas we could get them printed here as well, if not better, for $15;" and he added, "I think this is a nice little outrage."

Cincinnati has not been blessed with visits from many representatives of the trade of late—that is, within a fortnight. Among those who have been here are, Messrs. James, from Daniel Slote & Co., New York; Freeman, of the American Pencil Company, New York; and Gray, of Hill & Co., Worcester, Mass.

I probed the heavy dealers and manufacturers here on the subject of requiring licenses and imposing heavy local taxes on traveling salesmen, complaints of which I have seen from various sources in the correspondence of THE STATIONER. Every man of those with whom I talked said, "I have no trouble of that sort with men I send out." I ventured to remark, "Perhaps you don't send to cities where the license laws complained of exist." The quick answer was, "Why, yes, we do, but we are never troubled so long as we do a legitimate business, and when a mercantile traveler is taxed it's next to, if not quite, *prima facie* evidence that he has gone out of his sphere. These tax laws are not enforced against legitimate travelers, in our experience, but against the wolves of the guild." Now, I confess these remarks are

Hindoostanee to me—that is, I didn't quite catch the idea, and so I asked for an explanation, which I received in about the following words: "Why, I tell you, mercantile travelers come here from the East, and even from Chicago, and peddle. They'll go around to all the little stores 'over the Rhine' and in the west end on Freeman avenue, and take orders. After they've thoroughly canvassed the city and sold all they could to all our customers, they have the cheek to come to us and ask us to buy of them. There is no law here taxing such fellows—pity there isn't. We are taxed; we who stay here and do business, and they come here, supply our customers, and come afterwards and try to supply us, and they escape the taxes. A prohibitory license is none too good for fellows trying in that style to perform the feat of carrying water on both shoulders." I heard from more than one person testimony which the remarks just quoted express.

I have already mentioned the fact that Strobridge & Co. were running a great Hoe lithographic press day and night. Their line is illuminated show bills, and they are now three months behind with their orders. They give employment to several draftsmen and colorists and are turning off brilliant work.

PRINCE WILLIAM.

NASHVILLE NOTES.

[CORRESPONDENCE OF THE STATIONER.]

NASHVILLE, Tenn., March 12, 1881.

This city has probably suffered less from the severe winter than any city in the South. The bad roads in the country have retarded the movements of the people to some extent, but the city trade has amply compensated for it, being unusually fine.

Wheeler & Osborne report having done a splendid holiday business and during the months of January, February, and at present also. They were obliged to remain at the store during the evening to fill orders. They never had such a fine business before.

Hunter & Warren report a fair business in December. Since then business had been satisfactory. They do a large country trade in school and religious books.

Marshall & Bruce have done an unusually fine business throughout the entire winter. They report everything very satisfactory. Having located their office at the rear of their store gives them more room for clerical duties.

D. N. Neylan, ever active and wide awake, is holding auction sales nightly to make room for spring goods. It is his intention to continue them until the close of the exposition, which takes place next month. He has a large stock of books, stationery, toys, fancy articles, &c.—in fact, everything akin to be found in a notion stock. I judge he has fully $20,000 stock on his shelves. He buys and sells the most costly publications, and has many books not found elsewhere in this city.

A. B. Payne & Co. do a large business in card stock, and such stock as is usually required by printers. They report business very fine, and are paying more attention to fine stationery than formerly, and intend for the future to carry a large stock of that class of goods.

At Tavel, Eastman & Howell's everything seemed in the usual flourishing condition, and they report business as very satisfactory.

J. Setliff reported a very fine holiday business. Fine goods sold very readily. Since December, business had been very satisfactory.

J. M. Sobel's dollar store had done a good business. Mr. Sobel expects to be in New York next month to purchase a large stock for sale during the exposition.

The valentine trade in this city did not increase to the extent it did in Northern cities, or even in some of the Southern cities, but was very quiet. This once pleasant custom seems to be waning here.

Easter cards have been ordered quite freely. The custom of giving Easter cards is comparatively new for this section of the country. I notice some beautiful fringed goods by Tuck, of London, sold by Willy Wallach, of your city. Gibson's line gives satisfaction; so does Prang's, Marcus Ward's—in fact, it is difficult to find a "poor" line. Much attention seems to have been given to this class of goods this spring.

LEONIDAS.

CHICAGO NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

WESTERN OFFICE LOCKWOOD PRESS, No. 8 LAKESIDE BUILDING, CHICAGO, Ill., March 12, 1881.

Traveling agents from the East do not all go hence with smiling faces; but many of them, with hesitation in their tones, venture the assertion that "Business is'nt so good in Chicago, eh?" On the contrary, as my letters have all along shown, business here is simply "booming!" But—take note that the season started in early, before the enterprising drummer had yet overhauled his trunks, and consequently dealers here were forced to buy from list and catalogue; and when the "early bird" came hopping hither, the worms had all been caught and eaten. This in explanation of the conflicting reports of salesmen and tradesmen.

Brown & Kelly, the new Dearborn street firm, are at last fairly under way. Their store is attractive, and the goods are tempting.

H. D. Chapin, 93 Madison street, says that the present outlook is very fair, although the country dealers are deterred by the snow (a fresh instalment has just fallen) from coming into town to make purchases. When the roads open up, trade is expected to make a new spurt. Mr. Chapin wants to know—and many of your readers will second his question—why the largest and most reliable new book house in this city will persist in "cutting prices" so "dreadfully" to retail buyers? He instances Webster's Unabridged, listed at $12, which this house retails at $8.25. The Eastern publishers also sell books per post to private parties, often even below wholesale rates. If the trade will not protect their patrons, what inducement is there for a retailer to handle the goods. It would be well for the STATIONER to follow up its judicious remarks on wholesale stationery pirates, with a few hints to publishers sailing under the same flag.

Geo. H. Taylor & Co., in their stationery department display some tempting novelties. Among others of Whitmore's goods, sold by this house, are some rather large correspondence cards beautifully ornamented in one corner, with envelopes to match. Gilt-edge visiting cards in tinted paper imitating "seal" and wedding sets of the same style are very unique.

This office lately received a pleasant call from Geo. F. Barden, with Byron Weston, Dalton, Mass.

G. B. H.

MEMPHIS NOTES.

[CORRESPONDENCE OF THE STATIONER.]

MEMPHIS Tenn., March 1, 1881.

The Mardi Gras festivities are engrossing the public attention, and very little business is being done at present. The hotels are crowded, and commercial travelers are placed five and six in a room, with no chance to show goods. The corridor of the Peabody House is jammed. I noticed Mr. Wright, the new acquisition to the staff of commercial travelers of Ph. Hake. He reported a very fine business throughout the Far West.

Clapp & Taylor report having done a fine business in December, that is, a fine retail business, but the jobbing business was poor. The country was in a bad state through the heavy rains. Since then business in the city has been very fair, but not good enough in the country to warrant sending their travelers forth.

Wills & Wilberger report a similar state of affairs, but are satisfied that a good spring trade will come.

Young & Brother did a very good business during December, and since then report business as good as last year.

R. M. Mansford had a very fair trade, was very well satisfied with holiday business, and was doing a very fair spring trade.

Nicholas Williams & Co. are doing as well as usual. Their school book trade was very good for this time of the year, and they are looking forward to the usual spring trade.

The merchants are confident that the sanitary condition of the city is such that it will not be visited by yellow fever this year.

As soon as the country is in a condition for the farmers to move about, business will increase to its usual volume.

LEONIDAS.

HARRISBURG NOTES.

[FROM OUR OWN CORRESPONDENT.]

HARRISBURG, Pa., March 14, 1881.

Before returning to Philadelphia I visited the stationers of Harrisburg and of York, and have to report as follows:

Samuel W. Fleming, independently of the fact that he is one of the principal stationers of this city, is a printer and bookseller. His stock of staple articles and of fancy stationery is very fine. He sells Edward Todd's gold pens, and the MacKinnon stylographic. Langfeld, Turner & Andrews supply him with their finest goods. Mr. Fleming also buys largely of Charles J. Cohen. Marcus Ward, Dando, and Prang supply him with holiday and Easter cards; John W. Gladding sells him diaries and blank books. Harrisburg's favorite letter paper is sold by this gentleman under the name of "Fleming's best."

A. L. Groff, in order to enlarge his store, is going to remove from 336 Market street to No. 115 on the same street. Mr. Groff has been absent from the city during the stop I have made here. I can say, however, that he has a very pretty selection of stationery goods. He also does a good business as a bookseller.

Theo. F. Scheffer, stationer, bookbinder and printer, is not as well satisfied with trade as the generality of stationers. He says that the bad weather has kept buyers living out of town from coming to the city to make purchases; but he does not doubt that the spring season will be very profitable, as the holiday season was, with him, and has therefore given Marcus Ward and Dando full orders for Easter cards. He also deals with Cohen.

Bergner Brothers, booksellers, stationers and printers, make a specialty of fancy goods and notions, and carry a very full and varied line. They also make a specialty of law blanks.

These four houses are the principal dealers in this city, and do the largest share of trade in their line.

Crider & Brothers, at York, are the only stationers that I have to mention, but theirs is one of the best organized and stocked houses that I have visited. They sell the finest goods of the

best manufactnre, and make a specialty of fancy stationery goods, for which they find a large sale. They are also book sellers and printers and have a great reputation throughout the country, being considered the principal firm in one of their specialties.

My next letter will be dated from Philadelphia, where I shall call upon our friends and learn what they are doing and if they are satisfied with the conrse of trade during the five weeks that I have been absent from them.

J. VIENNOT.

MICHIGAN NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

DETROIT, Mich., March 14, 1881.

Detroit is beginning to take its place as a book publishing city, and in reply to several communications received here I would state that Thorndike Nourse, successor to E. B. Smith & Co., is the pnblisher of Webb's Dissected Cards, Webb's Word Method, Smith's Class Register, Smith's School Register, and Smith's Interest Tables. His advertisement will be found in this journal. Mr. Nourse also offers his entire line of fine photograph albums, costing him $2.90, at $1; also 300 sets of Macanley's History of England at $2 per set of five volumes, cloth.

Another house has just issued "Michigan University Book." From this volnme students and others can discover the scope and character of the work. It is printed and bonnd in a very agreeable manner, both in paper and cloth covers.

Proposals for stationery will be received at the County Auditor's office, at Detroit, nntil Monday, March 21, 1881, np to 4 P. M. sharp, for books and stationery for the county offices, according to schednle and samples to be seen in that office. Contract to commence April 1, 1881, for one year.

Batterell & Palmer have started a new ink factory at Reading, Mich.

Barnes Brothers' (of Detroit) paper warehouse was damaged by fire recently. Cause is believed to be spontaneons combustion, as when the firemen arrived there was no light in the building nor any fire in the stove.

There is no end to propositions for compiling and pnblishing the laws of Michigan, and every few days new propositions are received at Lansing. The last offered were one from Mr. Draper, at $2.25 per volume, and another from H. W. Derby & Co., of Colnmbns, Ohio, for $2.50 per volume. This offer is 25 cents higher than that of a Detroit firm ($2.25), which is 75 cents per volume less than the price named in the "Howell" bill. Notwithstanding the very clear offer of the Detroit firm, members of the committee say that the "Howell" and "Derby" offers are really the only "comprehensive documents" on the question they have as yet seen.

"The Michigan Compiled Law Pnblishing Company" has now been organized for the printing and publishing the compilation of all the laws of this State to and inclnding the session of 1881, in two volumes, at $2.25 each. The capital stock is $20,000, with 800 shares.

A certain representative of another Detroit publishing house is waiting his tnrn in the tide of affairs, while another seems bent upon getting it, from his nnmerous visits and frequent telegrams offering fresh propositions.

The report made by the Deputy Secretary of State relative to the cost of publishing the compiled laws of 1871 shows np the fact that the work cost $57,403.64. Certain friends of the State printers think that several thousand volnmes more than were required then can now be published for several thousand dollars less than the figures given from the Secretary's office.

A report having been circulated that the paper warehonse of Cornwells, Price & Co., on Jefferson avenne, had been sold, I am informed by one of the members of the firm that such a statement is without foundation.

Aronet Richmond is among the orange groves at Jacksonville, Fla., and has improved in health.

Thomas Walden, from the New York office of THE AMERICAN STATIONER, was in the city last week, and paid your correspondent a visit at his office. I regret the weather was so very unfavorable for his trip.

A New York representative has been traveling through the interior of this State, and reported to me that business is very good, and that he sold lots of goods.

John Willyoung has just concluded taking stock, and was well satisfied with his statement. His stock is always full and complete and fully up to the times.

Representatives since my last are J. H. Cook, with Carleton & Co.; W. S. Stedman, Holyoke, Mass.; Theodore V. Smith, with W. A. Haines, Philadelphia; Frank L. Landers, with Tower Manufacturing Co., N. Y.; F. E. Hafely, with E. & J. B. Young & Co., N. Y.; Fred. Braasch, with Keuffel & Esser, N. Y.; H. G. Kimball, with Readers and Writers Company, Chicago.

Joseph A. Marsh has retnrned to Detroit.

CITY OF THE STRAITS.

BRILLIANT METALLIC DEPOSITS ON GLASS.

The deposit of a silver mirror on the interior of glass balls and hollow vessels, by filling them with snitable silvering solntion, is a simple operation, yielding beantifnl results. The film of silver, althongh very thin, is not without expense. Metals which form, with sulphur, precipitates having a brilliant metallic lustre may be employed in the same manner as silver, yielding varied and beautiful effects at little cost. Carl Mann describes the nse of antimony and lead as follows: When nitric acid is added to a concentrated aqueous solution of tartar emetic solution, as long as a precipitate is produced, then filtered, and the precipitate stirred into fresh water, the liqnid formed is essentially a basic nitrate of antimony in suspension. On dilnting a portion of this milky liquid and boiling, the precipitate dissolves in the hot and acid liqnid. A little of this hot solution being ponred into a hollow glass vessel and cooled as rapidly as possible by shaking or holding it nnder running water, the liquid becomes milky and deposits a very thin, but perfectly homologous, film of the antimony salt on the sides of the glass. On washing it out with cold water and passing sulphuretted hydrogen gas into it, or pouring in a solution of the gas, the glass appears of a uniform faint yellow color; the sulphide of antimony formed adheres very firmly to the sides of the glass after washing and drying.

By repeating this procedure several times the film can be increased very considerably within certain limits. Such glasses appear of a beautiful golden color, with a green reflection. The effect is fine and pleasing. If snlphuretted hydrogen gas be passed into an aqneons solution of oxide of lead in excess of metaphosphoric acid, a portion of the sulphite of lead will, under proper conditions, adhere firmly to the sides of the vessel in which it is precipitated. The vessel will then have different metallic colors by reflected light, according to the thickness of the film —darker when thicker. By transmitted light, such a glass has a yellowish-brown color. The lead solution may be prepared by dissolving one part phosphoric acid in four parts of water; also a second solntion of one part sugar of lead in twenty parts of water; and a third of a strong decoction of saponaria, or an aqueous emulsion of an ethereal oil, such as tnrpentine or olenm serpylli. To cover a glass ball with this lead film, three volumes of the phosphoric acid solution are poured into the ball, then four or five of the lead solntion, and as much of the saponine solution. The total quantity of the liqnid must be sufficient to easily cover the interior on tipping it slightly. If a thin film of the antimony be deposited first, the lead film adheres better. The snlpheretted hydrogen gas is passed in, and the vessel kept moving, to bring it in contact with every part of the glass. It is afterwards washed and dried.

BRITISH POSTAL TELEGRAPHY.

From the statistics just issued, it would appear that the receipts for the past year, on account for the Postal Telegraph Department of the General Post Office, London, were £1,452,489, as against £609,734 in 1870; thus showing that the service had more than doubled in ten years. The receipts have steadily increased year by year. They reached a million sterling in 1873, and the increase has been considerable every year since that time. The total earnings of the last eleven years have been £11,483,464, besides services performed for other pnblic departments—which are not paid for—to the value of £93,746.

Salaries, wages and maintenance absorbed a total of £9,492,941, leaving a balance on the eleven years of £1,671,563.

While the expenditure necessarily increases with the greater income, the expenditure on salaries, &c., which last year amounted to £1,111,483, was less than in 1877 and 1878. The result is that the net balance, after paying all expenses, was larger last year than in any year since 1870, namely, £296,508.

This amount, however, was not sufficient to meet the interest on the stock created on acconnt of the telegraph service, which came to £326,417. The capital amonnt of the stock now stands at £10,880,571. The deficiency between the balance and the interest, last year, was therefore £29,-909, a much smaller sum than in any previous year.

The total of the deficiency in the telegraph revenne, to meet the interest on the stock up to the end of 1880, was £1,216,841.

A substitute for rubber, which, while it is cheaper, is elastic and tough, and not injured by high pressure or temperature, is prepared as follows: A quantity of coal-tar oil, or eqnal parts of coal and wood tar oil, which is to constitute a third part of the whole mixture, is ponred into a large kettle, together with an equal quantity of hemp oil, and is heated for several hours, either over steam or an open fire, to a temperature which lies between 252° and 288° F. (it should not exceed the latter), until the mass becomes so ductile that it can be drawn in long threads, and the remaining third, consisting of a quantity of linseed oil which has been thickened by boiling, is then added. With this composition from 5 to 10 per cent. of ozokerite and some spermaceti should be mixed. The mass is often heated again for some hours at the same temperature as above, and finally from 7 to 12 per cent. of sulphur are added. The mixture thus obtained is cast into forms and treated the same as caontchouc.

OLD BERKSHIRE MILLS

DALTON, MASS., U. S. A.

One party writes: 'The two hundred RECORD BOOKS, for 83 of the 99 Counties, now on exhibition at the Iowa State Fair, at Des Moines; and all, but four (!) of them, made from your 'OLD BERKSHIRE MILLS LINEN LEDGER,' Medium, 40lb., make a splendid show."

[The above cut is a fac-simile of the wrapper used on the Linen Ledger Paper.]

We will pay for any book rejected on account of fault in the paper. Send for Samples, test them in comparison, and see that your books are made from paper thus water-marked.

OLD BERKSHIRE MILLS

LINEN LEDGER PAPER

Will stand the severest test of COLOR, CLIMATE, INK OR WEAR.

Being **Triple Sized** (a process entirely our own) and **Loft Dried,** can be erased and written upon the fifth time distinctly. None genuine without the water-mark and date, thus—**Old Berkshire Mills Linen Ledger, 1881.**

No. 219 OLIVE STREET, ST. LOUIS.

L. PRANG & CO.'S Easter Cards for 1881.

We take pleasure in herewith presenting to the trade our Price List of Easter Cards for this Season:

ASSORTMENT.—Our Easter Cards are made up in sets of one dozen, except Nos. 11 to 19, and are put up in a box or envelope. Each set contains all the designs of the series; and as no series has more than six designs, each design is more or less repeated in the set.

ENVELOPES.—Fine Cream-Tinted Envelopes are furnished with every series, without extra charge.

EASTER CARDS, WITH SILK FRINGES.—We would call especial attention to these, as they will doubtless prove very attractive. These goods are made up with the best quality heavy silk fringe, made expressly for us. All fringed Easter Cards are furnished with Protectors and Envelopes, and are put up with assorted colors of fringes.

LIST OF PRANG'S EASTER CARDS FOR 1881.

No. of Series.	No. of Desions.	DESCRIPTION.	HOW PUT UP.	Retail Price per Set.
1	1	Daisy Egg, Folding Design, silk tassels	12 Cards, with Envelope	$7.20
1 F	1	Same Design, with silk fringe and tassels	12 Cards, with Protectors and Envelopes	12.00
2	1	Easter Dove	12 Cards, with Envelopes	6.00
2 F	1	Same Design, with silk fringe	12 Cards, with Protectors and Envelopes	12.00
3	2	Easter Chariot and Easter Boat	12 Cards, with Envelopes	3.00
3 F	2	Same Designs, with silk fringe	12 Cards, with Protectors and Envelopes	6.00
4	2	Daisies, Pansies and Butterflies, folding cards	12 Cards, with Envelopes	3.00

A full sample set of Easter Cards, being three cards of each series, and one of each design, in all sixty-nine cards for $12.50. Twelve satin samples, being three of each series, and one of each design of the four series, for $3.60. An envelope is sent with each card.

DELANO'S

RAILROAD Red Rubber Bands and Rings. COMMERCIAL

THESE goods are put up in bulk, each box containing a pound, thereby saving the expense of putting them up in gross and great gross packages, and are designed for use by parties consuming large quantities. These goods are very popular with **STATIONERS DEALING with LARGE CORPORATIONS, &c.**

THE SIZES ARE AS FOLLOWS:

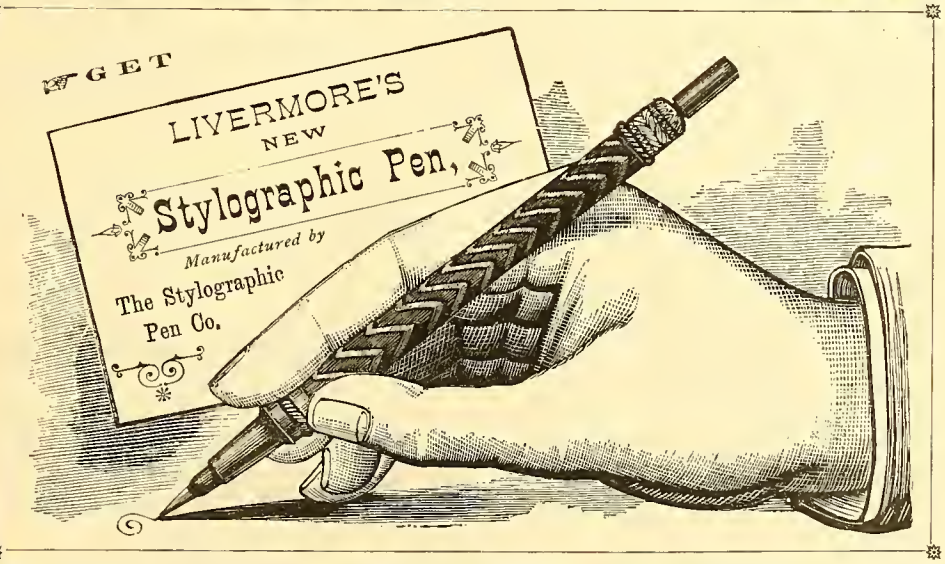
Elastic Bands. Nos. 27, 28, 29, 30, 31, 32, 33, 0¼, 0½, 0¾, 00¼, 00½, 00¾, 000¼, 000½, 000¾, 0000¼, 0000½, 0000¾. | Nos. 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20 and 50. **Elastic Rings.**

P. O. Box 1337. Z. DELANO, Boston, Mass.

IF YOU WANT THE BEST STYLOGRAPHIC PEN,

The Latest and the Best.

Circulars on application.



Examination Solicited and Satisfaction Guaranteed.

The attention of the Trade is called to the improvements made and advantages offered in Livermore's New Stylographic Pen.

Patented July 15, 1879, and March 9, 1880.

FIRST—**A Smaller Air Tube**, allowing more space for the ink, and rendering the operation of filling easier and less frequent.

SECOND—**The Manner of Fastening the Needle**, not to the air tube, where it would be in danger of being bent or injured every time the pen was filled, but in the point, where it is not so exposed.

THIRD—**The Protection of the Spring** by a silver casing, preventing the ink from clogging its action.

FOURTH—**The Duplex Interchangeable Point Section**, furnishing great facility in cleaning the pen.

FIFTH—**The Ease with which Repairs can be Made.** The needle being in the point, it is not necessary to send the whole pen to the factory, but any dealer can supply a new point.

SIXTH—**Freedom from Legal Difficulties.** The New Stylographic Pen is manufactured under the patent controlling the use of an air tube in a Fountain Pen, and it is therefore free from legal complications.

NEW PATENTS.

No. 238,451. Book Sewing.—David M. Smyth, Hartford, Conn., assignor to the Smyth Manufacturing Company, same place.

1. A method of sewing folded sheets together to form books, consisting in passing a double thread through at the back of the sheet, passing a second double thread through at the back of the next sheet and in the opposite direction and through the loop of the first thread, then passing the first thread through at the back of another sheet and through the loop of the second thread, and so on. 2. A book in which the folded sheets are connected at the back by two threads passing double and from opposite directions through the backs of the sheets, and connected by interlocking loops. 3. The combination, with the folded sheets, of threads, the loops of which are interlocked, and a cord or strip between the loops and the folded sheets.

No. 238,457. Paper Tube Machine.—August Tillmes, Philadelphia, Pa.

No. 238,465. Toy Cymbal.—Joseph White, Philadelphia, Pa.

No. 238,480. Pocketbook.—James C. Arms, Hartford, Conn.

A pocketbook provided with internal pockets, and a flap to cover and close the same, and with an external open-ended pocket adapted to receive an independent book or tablet.

No. 238,525. Proof Press.—William Quail, Brooklyn, N. Y.

No. 238,547. Printing Machine.—Edwyn Anthony, Hereford, county of Hereford, and Wm. W. Taylor, Fleetwood, county of Lancashire, England. Patented in England August 31, 1875.

No. 238,566. Cryptography.—Charles G. Burke, New York, N. Y.

No. 238,596. Toy Pistol.—Henry Klassert, Buffalo, N. Y.

No. 238,621. Picture Hook.—John H. Walker, Waterbury, Conn.

No. 238,720. Cushioning Device for Printing Presses.—Walter Scott, Plainfield, N. J.

The combination, with the cushioning cylinders and pistons in a printing press and their air cocks, of connecting devices between the air cocks and the belt-shifting mechanism, whereby the air cocks are opened by the mechanism that stops the press and closed or partially closed in starting the press.

No. 238,724. Process of Producing Relief Line Printing and Embossing Plates.—Charles Sneider, New York, N. Y., assignor of two-thirds to Daniel Slote, same place, and Samuel Clemens, Hartford, Conn.

The process of producing relief line plates, blocks or types for printing or embossing, the same consisting in securing a plate of suitable substance upon a plate of glass or other material frangible under the influence of heat, engraving the design in the substance down to the supporting plate, placing the same in a mold in a suitable flask provided with a gate for the introduction and a receptacle for the superfluous metal, and pouring the metal into the mold so as to pass over the face of the matrix before cooling thereon.

No. 238,735. Pen and Pencil Case.—Lewis P. Warth, New York, N. Y., assignor to Frederick Julius Kaldenberg, same place.

REISSUES.

No. 9,599. Stopper for Mucilage Holders.—Stephen S. Newton, Binghamton, N. Y., assignor to S. S. Newton & Co., same place. Original No., 193,024, dated July 10, 1877.

TRADE MARKS.

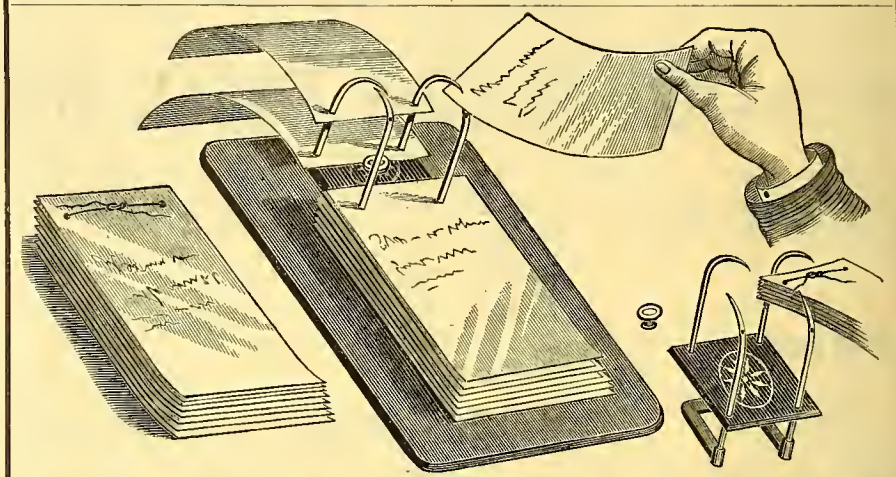
No. 8,189. Writing Paper of all Kinds.—Hard & Parsons, New York, N. Y.

"The word, figure or representation of an owl."

THE H. & W. FILE.

The Most Substantial, Simple and Convenient File Made.

A paper may be removed **MORE QUICKLY** than from any other File.
It need not be touched with the hands in order to file a paper!
It is **ALWAYS READY** for use.
It will accommodate 500 sheets.
It has **NO SPRINGS** to get out of order.
Its arms are **Solid Brass**, not tubes; therefore, stronger.
It has **NO MACHINERY** to work.
It requires **no separating of parts; no "Opening of Gates!"** no moving of anything up or down, sideways or otherwise, in order to file a paper!
It has **NO DETACHED APPARATUS** of any kind.
A paper **MAY BE READ ON ALL SIDES**, without removing from the File.



A paper may be **taken from or placed in any part of the File** without mutilation and without removing any other sheets.
A compact package may be made of its contents when full, and **removed all tied together.**
ANY BINDER may be used in connection with this File, as the package is in shape to go into any of the **BOXES** made for that purpose.
Its convenience is most appreciated in the using.
It will undoubtedly **OUTLAST ANY FILE MADE.**
It is made from the best **SEASONED WALNUT, HANDSOMELY FINISHED.**
It is richly mounted in **Brass**, and Japan Work.
It is made to Sell for its Merits.

PRICES.

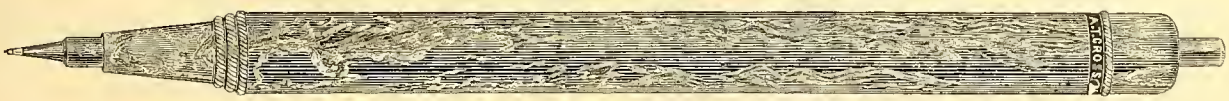
PERFECTED STYLOGRAFIC.

The original and genuine Pen. Warranted the best made. Thirteen Patents granted to **A. T. CROSS,** the last, June 29, 1880, being the most important and giving the name **Perfected.** All cuts are exact size



MAXIMUM.—Holds most ink of any pen made; tires the hand less than smaller barrels. Fits Hambler's Pocket. Same price as Long

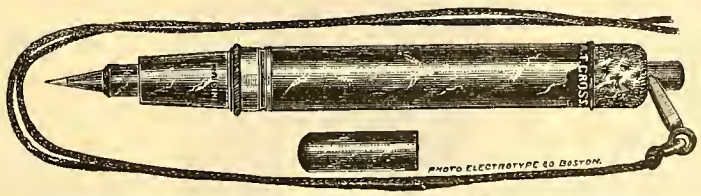
LONG.—The famous Desk Pen. Extra long. Holds most ink, except the **Maximum.**

SHORT.—Most widely known and sold heretofore; but Maximum is better for desk

or Hambler's Pocket, Giant for Vest Pocket or Cord. So this will be largely superseded.

Thirteen patents granted; seven more applied for; more genuine improvements; better record; more styles; larger stock; more thoroughly protected by patents than all rivals combined.

☞See Descriptive Circulars.



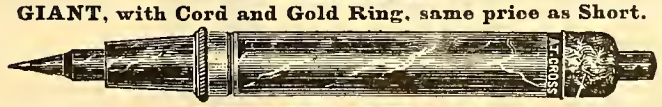
GIANT, with Cord and Gold Ring, same price as Short.

Dealers and agents supplied with wood, glass and paper signs, placards, circulars, leaflets and cuts. We make both largest and smallest Pens, both of which will have all new improvements.

☞See Descriptive Circulars.

VEST GIANT, Plain, - - $2.50.

All Styles up to $4.00.



☞ **VEST GIANT.—The Cheapest PERFECTED Pen made.**

This Miniature Cut is for Agents' Cards, Newspaper Advertisements, &c., &c., &c.

Trade Gossip.

All new goods and designs which are not, strictly speaking, "Novelties" will be noticed under this head. The trade are requested to forward descriptions with samples in order to secure proper notice.

E. Suiter, publisher, Dunlap, Ia., is moving to Denison in that State.

Benjamin Foster, manufacturer of paper boxes, Peoria, Ill., is dead.

John W. Pittock, bookseller and stationer, Pittsburg, Pa., is dead.

H. Rice, dealer in stationery, &c., Albion, Neb., has been burned out.

J. M. Ward, bookseller and stationer, Gilford, N. H., has been burned out.

Archibald Wilson, bookseller and stationer, Poughkeepsie, N. Y., is closing out.

The firm of Walter Logan, printer, New York city, has been changed to Logan & Feigel.

Norris A. Butler, dealer in fancy goods, South Berwick, Me., has sold out to Nellie Crane.

Frederick W. Clark, manufacturer of paper bags, Rochester, N. Y., has made an assignment.

Lawrence & Co., publishers of the *Eagle*, Grafton, West Va., have sold out to H. J. Snively.

Henry M. Pugh, stationer and bookseller, Wellsville, Ohio, has been closed out by the sheriff.

Philip J. Cohn, dealer in stationery and fancy goods, Philadelphia, Pa., has been sold out at auction.

Tavel, Eastman & Howell, publishers, &c., Nashville, Tenn., have dissolved partnership. Tavel & Howell succeed.

The firm of M. H. Danziger & Co., dealers in fancy goods, Pittsburg, Pa., has been dissolved by the retirement of J. P. Merrill.

White & Pratt, paper dealers, New York city, have dissolved partnership, H. E. Pratt retiring. Charles C. White continues and will settle the affairs of the late firm.

Ph. Hake has added a line of cheap chromo cards to his already extensive card business. These embrace an almost endless variety of subjects, and include imported as well as those of home manufacture.

The New York Blank Book Company and the International News Company having taken the entire buildings at 29 and 31 Beekman street, it necessitates the removal of J. H. Van Kirk & Co., who will secure other quarters on May 1.

T. Sinclair & Son, Philadelphia, offer three prizes, in sums of $500, $200 and $100, for the best three series of sketches for chromo advertising cards. Each series must consist of four to six designs. The competitive exhibition will take place in this city on May 10, and the awards will be determined by a committee of three gentlemen, one of whom is O. B. Hastings, of A. M. Collins, Cope & Co.

Evans & Gardner's card will be found in another column. The names of the gentlemen of this firm, William K. Evans and A. H. Gardner, have long been known to the trade, and the fact that they have succeeded in building up a good business is proof that they are acquainted with the needs of the trade both here and in Europe, and have the knowledge and experience to meet this demand with the very best of rubber, nickel and other goods of the line.

The great demand on L. Prang & Co. for goods has compelled the firm to build an addition to its factory so as to increase its producing facilities. The new structure was started when the ground was frozen several feet. but the usual energy displayed by the firm overcame every obstacle in that line, and the walls are now being erected rapidly. The building will give an addition of 30 feet to the whole length of the factory, and the machinery it will contain will double the present manufacturing facilities. It will be lighted by the electric light, which will greatly facilitate night work, and it is expected to have everything in running order by July 1, so as to celebrate on that day the twenty-fifth anniversary of the firm.

Charles J. Cohen, Philadelphia, has introduced to the trade a new paper of very handsome character. It is of pure cream or "Perfection" shade, very highly plated, and the wide laid design which is now exceedingly popular. It may be had in octavo or commercial note, with envelopes to suit, or in correspondence style, plain and gilt edge; the last is entirely a novel design with the house, and has become very popular wherever shown. Samples and prices will be submitted to any of the trade applying to the house.

W. R. Rogers, of the firm of Gilbert & Bradley, Louisville, Ky., will be married on the 24th of this month to Nellie McMichael, a beautiful and accomplished young lady of Anchorage, Ky. They will make New Orleans their future home. THE STATIONER joins their numerous friends in wishing them godspeed in their matrimonial venture.

Thomas S. Dando, of Philadelphia, sailed for Europe on Saturday last on the Britannic. He intends visiting London, Paris, Berlin and Vienna in search of cards and specialties for the Christmas holidays. The trade will expect great things from Mr. Dando during the next season, and he will doubtless meet their expectations.

Langfeld, Turner & Andrews, Philadelphia, have received some important orders for their leather goods from St. Petersburg, Russia. These come from one of the subscribers to THE STATIONER. This is one of the results of intelligent advertising.

Arthur L. Van Benthuysen, of the firm of Charles Van Benthuysen & Son, printers, paper makers, &c., Albany, N. Y., died on Friday morning, March 11, of pleuro-pneumonia after a short illness.

Langfeld, Turner & Andrews, Philadelphia, have received an order from Australia for 300 gross of their pocket books, and expect to receive several other orders from the same quarter.

Louis A. Lipman, with Boorum & Pease, whose severe illness at Adrian, Mich., was reported last week, is convalescent, but not yet able to return home.

Hasbrouck & Watson, manufacturers of the well known M. & H. blotter tablets among other things, say that the printed forms can be used all over the world.

C. A. Chapin & Son, fancy goods dealers, Hartford, Conn., have dissolved partnership. Chapin Brothers succeed.

The firm of Olshausen & Kieselhorst, stationers, &c., St. Louis, Mo., has been succeeded by E. P. Olshausen & Co.

Robert L. Johnson, president of the Albany Card and Paper Company, Albany, N. Y., died on Friday last.

C. Sadler, of Sadler & Co., San Francisco, was in the city this week buying goods.

J. Stackpole, newsdealer, &c., Chicopee, Mass., has sold out to H. M. Loring.

Laban Sawyer, fancy goods dealer, Boston, Mass., is dead.

Bert Prior, publisher, Dow City, Iowa, has sold out to F. Bangs.

John E. Joos, printer, Allegheny, Pa., is advertised to be sold out by the sheriff.

Hampton & Hamlin, publishers of the *Journal*, Macomb, Ill., have dissolved partnership.

Benjamin Dalton, dealer in fancy goods, Biddeford, Me., has sold out to Mrs. L. E. Rogers.

August Hoen, Baltimore, and Mr. Brearley, of Brearley & Stoll, Trenton, N. J., were in town during the week.

Joseph B. Bates, publisher of the Tazewell County *Republican*, Pekin, Ill., has admitted W. H. Bates to partnership.

Henry M. Hall, printer, Minneapolis, Minn., has admitted J. W. Bintliff to partnership. Their style is Bintliff & Hall.

The firm of C. S. McKim & Co., manufacturers of blank books, &c., Cleveland, Ohio, has been changed to McKim & Billings.

The firms of J. H. Miller and Trautman & Palmer, printers, Columbus, Ohio, have been merged into Trautman, Palmer & Miller.

It is reported that Randall & Robinson, publishers of the *News*, Tekousha, Mich., have dissolved partnership, and that T. F. Robinson succeeds.

Myers Brothers report an accumulation of orders for their satin Easter cards, which are so attractive that it is said every lady who sees them is bound to have one.

The Dennison Manufacturing Company has got up a handsome mahogany case or sealing wax, cabinet containing four pounds of its fine letter wax, for the use of the trade. This case provides a neat and convenient method of carrying sealing wax for retail sales and will be a handsome adjunct to any stationer's counter.

The Esterbrook Steel Pen Company has just brought out for public favor, a new style of pen. This is specially adapted for engrossing purposes and text writing, and has been christened the "Text Writer." It is made in three different grades. No. 1 is extra blunt, with a point nearly one-eighth of an inch wide; No. 2 is a medium, and No. 3 is coarse, although the finest of the series.

Although yet quite early in the season, R. Fideau, 16 Beekman street, has been compelled to work his factory day and night to fill orders received for his patent hammocks. In addition to being very busy in the supply of the home trade, he is filling a number of export orders for Cuba, the West Indies, South America, and other foreign points. His facilities for turning out these goods enables him to compete in quality and price with any other manufacturer in this country.

The Mattapan paper mill of Tileston & Hollingsworth, at Hyde Park, Mass., was burned early on Sunday morning. Much of the machinery and a considerable quantity of paper, pulp, &c., were destroyed. The mill was established more than forty years ago, and this is its first disaster. The paper manufactured was plate paper. The total loss is estimated at $75,000, upon which there is an insurance of $45,000. The cause of the fire is unknown, but it undoubtedly originated in the rag room. Some of the employees worked as late as midnight Saturday night, and when they left everything appeared safe. It is presumed to have been a

case of spontaneous combustion. The mill will be rebuilt.

A. H. Goetting has just introduced a neat yet cheap line of papeteries.

The young house of Hard & Parsons is pushing business lively, and the goods offered by it are selling well.

L. Prang & Co.'s Easter cards are now ready and orders will be filled this week. The line is in such demand that some of the series are already closed out, although not yet placed on the market.

Frederick A. Stuart has withdrawn from the firm of Stuart Brothers, manufacturers of and wholesale and retail dealers in blank books, Philadelphia, Pa. The remaining partners continue under the same style.

L. C. Styles has severed his connection with McCarty & Hasberg. Due notice will be given to his friends and the stationery trade generally of his future movement, as he does not intend going out of the business.

B. E. Pike, representing M. A. Reay & Co., has just returned from an extended Western trip. He reports excellent success, and says that he secured a greater amount of orders than ever before during a spring trip.

The American Crayon and Slate Company, on account of the rapid growth of its business, has been compelled to seek larger and more commodious quarters, and has rented the whole building at No. 43 Dey street, just two doors below its present location, to which it will move during April next.

Taber & Co. show a large number of photographs of religious subjects appropriate for the Lenten season and Easter tide. They are mounted on gold, olive green and black faced panels, and have beveled gold edges and hand-painted floral decorations. They are in cabinet, 6 by 8 and 8 by 10 sizes.

COLORS FOR GLASS.—Oxide of gold is employed to impart to glass a beautiful ruby color. Sub-oxide of copper gives a red color. Silver, in all states of oxidation, gives a variety of beautiful yellow and orange colors to glass. Antimony, lead and silver, in combination, are employed to produce the inferior yellow color. The oxides of iron give to glass various shades of green, yellow, red and black. Oxide of chromium gives a fine green, and oxide of cobalt a splendid blue. The color most valued, next to that produced by gold, is the yellow communicated by oxide of uranium, and which has an appearance resembling shot silk. White glass or enamel is made by adding either arsenic or the oxide of tin to the melted metal. The various metals used in coloring glass are also employed in the manufacture of artificial gems, and by their means the color and general appearance are well imitated.

BLEACHING GUTTA PERCHA.—Dissolve the gutta percha in twenty times its weight of boiling benzole, add to the solution plaster of very good quality, and agitate the mixture from time to time. By reposing for two days the plaster is deposited and carries down with it all the impurities of the gutta percha insoluble in benzole. The clear liquid decanted is introduced by small portions at a time into twice its volume of alcohol of 90 per cent., agitating continually. During this operation the gutta percha is precipitated in the state of a pasty mass, perfectly white. The desiccation of the gutta percha thus purified requires several weeks' exposure to the air, but may be accelerated by trituration in a mortar, which liberates moisture which it tends to retain.

THE STATIONER.

DEVOTED TO THE INTERESTS OF THE

Stationery and Fancy Goods Trades.

WEEKLY---$2.00 PER ANNUM.

Single Copies - - - - 10 Cents

NEW YORK, THURSDAY, MARCH 17, 1881.

Advertisements cannot be received for insertion in the current week later than 12 M. on Wednesday. The charge for advertising is 25 cents a line, each insertion. Special terms for standing and displayed advertisements to be had on application.

This journal aims to be a medium of information for and a representative of the interests of every one connected with the stationery and fancy goods trades. It contains a full and trustworthy survey of the market for stationery in this country, in all cases giving the actual prices at which goods can be bought of importers and jobbers in this city, together with a detailed account of novelties in the trade, patents relating to stationery, and current items of interest. A review of foreign markets and accounts of movements abroad will also be furnished, and no pains will be spared to make THE STATIONER a thorough and complete exponent of the trade.

Subscription and postage for Great Britain, per annum..... 12s.

Any information our readers may wish to obtain shall be cheerfully given, and prompt replies will be made to all inquiries addressed to us on any subjects of interest to the trade.

Communications on all trade matters are earnestly solicited. Address

HOWARD LOCKWOOD, Pres. and Treas.
American Stationer Association,
74 DUANE STREET, NEW YORK.

Subscribers to THE STATIONER can be supplied with the best cloth binder in the market. Deliverable at the publication office. Price, fifty cents.

Readers of this paper who avail themselves of the information obtained from its columns, by advertisement or otherwise, are requested to notify their correspondents of the source of their information.

CHICAGO, it appears, has been getting ahead of the spring trade—at least our correspondent says so.

How is it that the commercial traveler has been so badly "left" on some of the Western trade. Did he think that the enterprising men out West were going to wait for him?

UNDERSELLING the trade is an old trick with the book publishers. Our Chicago correspondent calls attention to the fact that it is still in vogue and has excited some very hard feeling. We are not surprised that it should. If there is any one thing which we conceive to be contemptibly mean in trade, it is that a wholesale house will sell to a retailer, and after making sure of its money cut the ground from under the feet of the tradesman by selling at the trade price, or under, to his customers or to those who, of right, ought to be his customers.

FACTS like these, when they are plainly established, ought to be made public. There is no offense at law or morally in stating them without comment. If a tradesman finds that the house from which he buys goods by the thousand dollars' worth at twenty per cent. discount sells to a consumer one dollar's worth at the same rate, he is justified in making a plain statement of the circumstances, giving names and figures. He can safely leave others to draw their conclusions and make their own private comment. Such an act is a trick, a deceit, a fraud. It is immoral and opposed to the true standard of duty. It is pinching the miserable shilling at the expense of honor and truth.

LAST week our Montreal correspondent took occasion to refer to our remarks anent the lack of courtesy shown to customers and he points the application directly at some of our New York houses. We are very sure that the heads of the firms concerned would be very much surprised, not to say grieved, to know that their clerks had been so wanting in courtesy and deficient in business capacity. He is a poor servant to whom such a charge can be laid. It shows that he neglects his employer's business or that it is too big for him. Not that he is too big for the business. On the contrary, the clerk who neglects his duty, in this respect, shows that he has a narrow brain and is mentally if not physically incompetent to take his position in life on the plane of broad humanity. Three houses in William street have lost a good customer because of such discourtesy. William street ought to blush for itself. But it is not always that the clerk is alone to blame. There are some heads of firms as well who don't know how to be decent; some men in official positions who are too large for their clothes. We do not now refer specially to the stationery trade, but make our remark of general application. Such men are snobs—better fitted to hold the position of a cad than that of authority. We hope to see such characters eliminated from the trade, and trust there are very few to dispose of. After all, a gentleman is like the poet, born not made. The thin veneer of pseudo good society education does not conceal the ape beneath it, and he who sticks his nose highest in the air is more often the one whose most fitting associations are in the kennel. To the young men of the trade we would say that, to be courteous, they should be noble; to be noble they must be brave; and to be brave honorable. These qualities make the man whom circumstance or position cannot dishonor.

ANSWERS TO CORRESPONDENTS.

C. S. Co. wants to know where to find corrugated paper, and who manufactures it.

Ans.—It is patented and made by the Newton Paper Company.

R. S. (London) wants to know who makes the printing ink with which the *Hub* is printed.

Ans.—Geo. H. Morrill & Co., Boston.

R. A. R. & Co. ask for name of manufacturer of perforated carpet lining.

Ans.—Auburn Paper Company, Auburn, N. Y.

S. C. W. asks who are the manufacturers of document envelopes.

Ans.—F. S. Hasbrouck & Co., 67 Park place, N. Y.

J. D. M. asks for names of manufacturers of envelope machines.

Ans.—As your letter was written before the publication of our answer to a similar inquiry, you are probably now posted. See last week's STATIONER.

Ewan & Co., Yarmouth, Nova Scotia (B. S.)	1

Among the members of the trade who visited the city during the week were Lalon Z. Farwell, Freeport, Ill.; J. H. Eckhardt, of J. H. Eckhardt & Co., Hartford, Conn., and Mr. Carrier, of Carrier, Marshall & Co., Toronto.

DIFFERENCES IN PORCELAIN.

Porcelain, or china as it is commonly called, can be distinguished from pottery or faïence by holding it against a strong light. Porcelain will then appear translucent, pottery or earthenware opaque. According to the relative hardness of the paste after firing, porcelain is divided into hard-paste porcelain and soft-paste porcelain. Hard-paste porcelain can only with difficulty be scratched with a file or a steel point, has a semi-vitreous fracture, and will stand without injury sudden alternations of a high and low temperature. It feels cold to the touch, and is bluish milk-white. The rims or projecting rings, upon which specimens of hard-paste porcelain rest, are generally left without glaze, which affords a ready method to distinguish them from specimens of soft-paste porcelain.

Soft-paste porcelain is more easily attacked by a file or a steel point, less dense, of a fine porous fracture, feels warm and soapy to the touch, and has a cream white, enamel-like appearance. The supporting rims are generally covered with glaze. The paste after firing is nearly equally translucent and sonorous as hard porcelain.

The different degrees of hardness in hard paste and soft paste porcelain are due to different proportions of silica and alkalies in the body. The larger the proportion of silica present the more compact the resulting porcelain. The average amount of alkaline oxides in Oriental porcelain appears to be 6 per cent., in Dresden 6.3 per cent., in Bristol 4 per cent., with about 60 to 65 per cent. silica and 30 per cent. alumina. The soft English porcelains often contain no less than 33 per cent. of alkaline matters, with only 40 per cent. of silica and 25 of alumina. Soft porcelain is an artificial combination of an alkaline flux with bone ash, sand, chalk, or gypsum. Hard porcelain is composed of *kaolin* and *petunse*, both natural products. Kaolin alone would form an opaque body, but by the admixture of a perfectly transparent substance, petunse—called "moorstone" or "chinastone" in England,—the paste is rendered capable of transmitting light.

PAPER CAR WHEELS.

The paper is strawboard of rather fine texture. It is received in the ordinary broad sheets, differing in no particular from those used for strawboard boxes or other similar work. These sheets as they come from the paper mill are square, and must, first of all, be cut to a circular pattern. This is rapidly done on a large table, with a knife that is guided by a radial arm that swings freely over the surface of the table from a pivot at the centre. A small disk is also cut from the centre of the sheet to allow for the iron hub. Being thus reduced to the required shape and dimensions, the paper must now be converted from a mass of loose sheets into a compact, dense body, capable of withstanding the tremendous crushing force to which it will be subjected in the wheels. This is accomplished in the following manner:

Ten sheets are pasted together, one upon the other, making a disk of about one-eighth of an inch thick. Enough of these disks having been prepared to fill a powerful hydraulic press, they are subjected to a pressure of 1,880 pounds to the square inch. When removed the disks are hung on poles in a steam-heated loft and left six days to dry. Thicker disks are then made, each formed by pasting together two or three of those already finished. These are pressed and dried as before, and the process is repeated until a block is built four inches thick and of about the specific gravity of lignum vitæ. After each pasting and pressing six days are allowed for drying, and when the block is complete it is left in a drying room until thoroughly seasoned. The next operation is that of turning the paper blocks to fit the steel wires and iron hubs. This is done in lathes with as much accuraay and in exactly the same manner as if the material worked on was iron or wood. The circumference is turned to a perfect circle of the precise diameter required, a bed or recess is worked out for the web of the tire to rest in, and the edges sharply defined. The block is then painted and is ready for its place in the wheel.

NEW PROCESS OF ETCHING.

A new process of making designs and letters etched into glass or porcelain stand out in dull relief has been devised in Germany by Wm. Gruene, of Berlin, which is described in the latest issue of the German *Glasshütte* as follows: Permanent designs on glass are produced chemically by etching with diluted fluoric acid and covering the neutral ground with a coat capable of resisting the acid. The diluted acid dissolves the glass, without visibly affecting the remaining parts. The dimmed appearance of the design has to be artificially produced by grinding the elevated parts, causing the clear and dimmed parts to form the design. The figures must be etched deep in order not to be touched by the artificial dimming. This new process enables everybody to stamp and ornament glass like paper. The principle of the operation is as follows:

We use the property of fluoric acid to etch glass; but do not cover the surface as before with a coat absolutely proof, but with one that protects only to a certain point. This point reached, the vessel is affected by the acid, and the design etched dimly into the surface. For this purpose we can use almost all the lacs, oil varnishers, oil lacs, greasy printers, colors, &c., known in technology, excepting, however, the solutions of asphaltum and gutta percha. If coated thinly, they yield to the fluoric after a few seconds. If we therefore use them for the above purpose, we obtain designs but very feebly marked. But if, after coating the surface, we sprinkle it with finely pulverized metal, copal, or other material calculated to resist the action of fluoric acid, and allow these to dry well, the designs obtained are much better marked. This is the essential part of the new process, for which the following important advantages are claimed:

1. As the etching is not deep and rapid, we require no special protection for that part of the vessel not to be ornamented.

2. As only feebly covering means are required, we cannot only use all possible means of drawing the designs, such as brush, pin, pen, pattern, &c., but also easily transfer designs resulting from typography, lithography, and similar methods of printing.

3. As we can regulate the thickness of the coats, and apply powder of a finer or coarser grain, we can produce surfaces more or less dimmed; in other words, we are able to create different shades in one and the same etching.

The process is practically carried out as follows: First apply the design (with hand stamp or transfer, as the case may be) to the surface to be decorated, by means of slightly colored oil lac, to show on the transparent glass. Next, dust the design with metal powder. When dry, dip in fluoric acid, or apply the acid to the design with a brush, until after a few seconds the powder begins to get loose. Then the vessel is rinsed in water. It is not even necessary to remove the oily coat, for the acid so affects it that it can be rinsed off in water.

In a letter, addressed to Mr. Cust by Professor F. W. Newman, and published in the *Journal of the Royal Asiatic Society*, on the Libyan languages, the writer remarks that St. Augustine in his own day attested that one language prevailed in Roman Africa, and that it was quite natural to suppose the same to be the case now, when a large and striking similarity was found in the leading nouns and verbs. The changes, however, induced in fifteen hundred years have broken up the original unity, and Professor Newman states that we are now forced to admit at least four languages, each differing from the other more than German from Dutch, or Portuguese from Spanish.

Market Review.

OFFICE OF THE AMERICAN STATIONER,
WEDNESDAY, March 16, 1881.

THE MONEY MARKET.—The money market continues to work smoothly, the supply of capital offering being fully equal to the requirements of borrowers. Call loans on pledge of acceptable stock collateral ranged between 4 and 6 per cent., and closed at 4@5 per cent. Loans were effected on United States bonds at about 4 per ceut. Time loans were quoted at 5@6 per cent In the discount market prime mercantile paper ruled at 5@6 per cent. The government bond market was moderately active, and a general advance of ⅛ per cent. was recorded. Railroad mortgages were in fair demand, and were in the main strong and higher. The stock market has been comparatively dull, irregular, and for the most part weak. The market for foreign exchange was active and firm, and posted rates for prime bankers' sterling were advanced ½. The actual rates at the close were as follows: $4.79¾@4.80¼ and $4.82¼@4.82¾; cables, $4.82¾@4.83¼; prime commercial, $4.78¼@4.78¾.

THE PAPER MARKET.—The movement of paper generally in the hands of the jobbing trade continues quiet, but quite sufficient, notwithstanding the increased production, to prevent any decline in prices. With manufacturers it is said that many of them are quite fully engaged on large orders taken recently at a shade below quotations. These orders are more particularly for super-calendered book paper. With the exception of the heavy orders referred to above, quotations for book paper are very firmly held, and the supply is only moderate. There is a disposition to shade prices on news. and 6½@7c. is about the range quoted in lots from store for ordinary rag paper, and 6¾@7¼c. for straw. Manilla wrappings continue fairly active, and prices are firmly held. Straw wrappings and binders' boards show no special movement. Straw boards have been selling fairly, but the demand for the spring trade has been very nearly supplied.

THE STATIONERY MARKET.—Business in almost every branch of the trade with one or two exceptions has continued quiet during the past week. This is due in some measure to the bad weather in the Northwest and other parts of the country. Although fall trade commenced last year several weeks earlier than usual, spring business is backward this year, and to some extent disappointing. Many jobbing dealers, profiting by the lesson of last fall, laid in their stocks early in order to be ready when the rush of business came. A stage of the season has now been reached, however, when settled weather all over the country may be looked for, and with it a steady increase of business is confidently and reasonably expected. A great many new enterprises projected will soon be under way, which will naturally help to increase the demand for staple stationery. The Easter card business begins to slacken, although there is a fair trade doing. Cheap chromo cards are having an immense sale, new dealers starting in the business almost every day. Prices generally are steady.

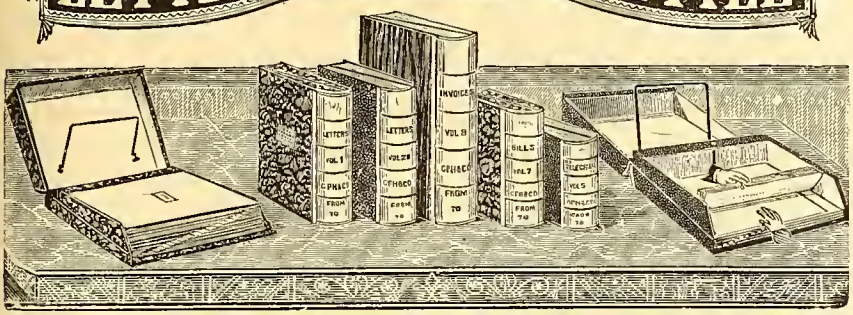
ECONOMICAL. CLEANLY AND LABOR SAVING

SELF INDEXING BROWN'S PERFECT SELF-BINDING

LETTER BILL INVOICE FILE

PATENTED OCT. 30 1877



Prices: Marble Paper Sides, $15.00; Cloth, $18.00; Walnut, $24.00 per doz

The following are a few of its many advantages:

1st—It will hold nearly twice the quantity of any File of equal bulk.

2d—It costs less than any File of equal capacity.

3d—It is instantaneously *self-indexing* and *self-binding.*

4th—It does not *tear* or *mutilate* the letters.

5th—Any letter or paper can be *removed* and *replaced at pleasure* and at any time, *without* tearing or mutilating, or in any manner *disturbing* the others.

6th—Its contents are not *exposed* to *dirt* and *dust*, and are kept in a cleanly, orderly manner for rapid reference.

7th—It *files, indexes* and *binds* in *one operation*, and in less time than is consumed for either with any other File now in the market.

8th—It is adapted to any system of filing.

THE PHONIC WHEEL.

It has been the object of numerous inventors in the field of the telegraph to devise a plan whereby the possibilities of errors in the transmission of messages should be reduced to a minimum, or entirely avoided, and to this end their efforts have been directed to the invention of a simple, reliable and rapidly operating printing telegraph, by means of which the words of the message could be recorded at the receiving station, not in the lines and dashes of the Morse system, but printed in type upon the ribbon. A number of such printing telegraphs have been devised, and are in successful use.

The purpose of the present article is to explain certain substantial improvements relating to this class of telegraphic apparatus, which have been devised by Paul la Cour, of Copenhagen. The invention in question is termed the "Phonic Wheel," and is designed to secure perfect regularity in the operation of the printing-telegraph.

Before describing this ingenious apparatus, however, it will be necessary to refer to the general construction of printing telegraphs, to understand its proper function. In all printing telegraphs, the letters which print the words upon the paper ribbon are disposed upon a single (or several) rotating disks, the so-called type disk or wheel. As soon as the particular letter to be printed has arrived at the roller over which the paper band is carried, another mechanism must instantly be set in action to do the the printing. The operator at the sending station, therefore, must know the precise instant of time at which a certain letter has arrived before the printing apparatus at the receiving station, in order to be able to set the printing mechanism in action at the proper moment. With certain printing telegraphs the arrangement of the apparatus is such that the type wheel at both the sending and receiving stations is set in rapid and uniform motion. To secure such absolute uniformity of motion, however, which is necessary in order that the printing mechanism shall act with certainty, demands the intervention of somewhat complicated apparatus, or the use of a strong current.

As a good example of a rapid and reliable printing telegraph we may take the apparatus of Hughes in which the type wheel makes two revolutions per second, placing at the service of the operator eighty letters in that time, of which, however, only about four can be printed. This apparatus, however, is much too complicated to warrant its general introduction. In the Hughes apparatus, synchronism (the movement of the type wheels uniformly in equal times) is established and maintained by means of clockwork, which requires to be wound up several times each hour.

A wonderfully simple apparatus for the purpose of maintaining the synchronous movement of two wheels or disks, set in action by an electric current, is the above named "phonic wheel" of La Cour. It consists of a toothed disk of soft iron, before which is placed an electro-magnet, magnetized by a succession of rapid and uniform electric impulses. These current impulses are established by means of a special apparatus, an important part of which is a tuning-fork, the rapidity of whose vibrations may be modified by shifting weights, in order that a number of tuning-forks may be made to vibrate in uniformity. The tuning-fork is supported from a post, and opposite its free ends are the polls of two electro-magnets. When at rest, the ends of the fork are in contact with two slender metallic strips, which constitute the terminals of an electric current, of which likewise the electro-magnets form

a part. When the current from the battery is started, it magnetizes the two electro-magnets. The magnetism developed in their poles draws the extremities of the tuning-fork apart, and, as a result of this action, the contact with the above named metallic strips is broken, and the current is interrupted. The electro-magnets instantly lose their magnetism, and the ends of the tuning-fork vibrate back to their normal position, and beyond it. Contact with the metal strip is again established, the current passes again, the electro-magnets are again magnetized, and the fork is thus maintained in perpetual vibration.

By this device a series of current impulses pass through the conducting wires of the circuit, and the rapidity of these successive impulses will be controlled by the rapidity of the vibrations of the tuning-fork. These current impulses magnetize, with the same uniform interruptions, the electro-magnet placed before the phonic wheel, the first impulse attracting the tooth nearest its pole, the following one the next tooth, and so on. It will be manifest, therefore, that, where a number of such phonic wheels are introduced into the phon-electric circuit above described, they should all be set in motion and continue to move with perfectly uniform velocity.

There is a certain practical difficulty, however, which modifies the absolute synchronism of the disks, but which is provided against by the inventor. This difficulty consists in the fact that the movement of the toothed wheels is accomplished by a species of pendulum-like movement, which may cause a slight irregularity in movement. This irregularity will be less with a heavy wheel than with a lighter one. To provide against it, La Cour has devised a simple regulator, consisting of a closed cup or capsule, filled with quicksilver, which is placed upon the wheel. Now, in case the wheel should move too slowly, the quicksilver in the capsule, having a greater momentum by reason of its more rapid movement during the preceding impulses, accelerates the movement of the wheel by the amount of its retardation. Should the wheel move too fast, the slower movement of the quicksilver acts as a brake to retard it. Thus the mass of quicksilver, by its inertia, controls any irregularities in the movement of the wheel, and preserves a practically uniform motion.

If now a printing disk is connected with the phonic wheel (an arrangement which must be set up at each station), and the position of the letters on the printing disks of sending and receiving stations is the same at the outset, it is manifest that the operator, by means of a second wire, can actuate the printing mechanism at a distant station as soon as the letter he wishes to print has reached the proper position in his own, the accuracy and reliability of the printing being assured by the regulating action of the phonic wheel.

The printing wheel, and the printing mechanism, with inking roller, paper ribbon, etc., are sufficiently well known. The printing wheel is connected with the phonic wheel by an elastic connection, in order that the movement of the latter shall not be affected by the retardation the former suffers while printing.

From the foregoing, it will be perceived that the speed of all the type and phonic wheels of one system must be practically synchronous. If at the beginning of a day's work all the type wheels are set to a certain letter, the synchronism will be perfectly maintained throughout the day, as numberless practical trials of the apparatus have amply demonstrated.

The wheel has thirty teeth; and as the tuning-fork of the phonic system makes ninety vibrations to the second, it makes three revolutions in the same time, while in the Hughes printiug telegraph the printing wheel makes but two revolutions per second. Beneath the wheel sixty contacts are provided.—*Manufacturer and Builder.*

"THE GREAT ROCK ISLAND ROUTE"

Calls your attention to the following REASONS WHY, if about to make a Journey to the GREAT WEST, you should travel over it:

As nearly absolute safety as is possible to be attained. Sure connections in UNION DEPOTS, at all important points. No change of cars between CHICAGO, KANSAS CITY, LEAVENWORTH, ATCHISON or COUNCIL BLUFFS. Quick journeys because carried on Fast Express Trains. Day cars that are not only artistically decorated, but furnished with seats that admit of ease and comfort. Sleeping cars that permit quiet rest in home-like beds. Dining cars that are used only for eating purposes, and in which the best of meals are served for the reasonable sum of seventy-five cents each. A journey that furnishes the finest views of the fertile farms and pretty cities of Illinois, Iowa and Missouri, and is afterwards remembered as one of the pleasant incidents of life. You arrive at destination rested, not weary; clean, not dirty; calm, not angry. In brief, you get the maximum of comfort at a minimum of cost.

That the unremitting care of the Chicago, Rock Island & Pacific Railway for the comfort of its patrons is appreciated, is attested by its constantly increasing business, and the fact that it is the favorite route with delegates and visitors to the great assemblages, political, religious, educational and benevolent, that assemble from time to time in the great cities of the United States, as well as tourists who seek the pleasantest lines of travel while *en route* to behold the wonderful scenes of Colorado, the Yellowstone and Yosemite. To accommodate those who desire to visit Colorado for health, pleasure or business, in the most auspicious time of the year, the Summer season and months of September and October, the Company every year puts on sale, May 1st, at all coupon ticket offices in the United States and Canadas, round trip tickets to

DENVER, COLORADO SPRINGS AND PUEBLO,

At reduced rates, good returning, until October 31st. Also to San Francisco, for parties of ten or more, good for ninety days, at great reduction from regular fares.

REMEMBER, this is the most direct route for all points WEST and SOUTHWEST. For further information, time-tables, maps or folders, call upon or address

THE PAPER TRADE IN THE CITY OF NEW YORK.

[Continued.]

Apart from his association with the manufacture of white paper from straw Coe S. Buchanan has a very interesting history in connection with the general paper trade. He comes of an Orange County, New York, family, and was born in Essex County, New Jersey, n June 1824. The late James T. Derrickson having married his sister young Buchanan was ushered into the paper business in 1841 at the old Plain Valley paper mill, near Morristown, N. J., then owned by Gaunt & Derrickson. Of this mill Mr. Buchanan gives the following interesting account:

"It had in former days been a hand mill, never handsome, and its appearance was not at all improved by latter additions. The rag room was much the best part of it, ample in size and well lighted. Its proportions were due to the fact that all the stock was then prepared by hand, and good old Barbara, who was mistress of this department, required a large force to prepare the quantity needed for the half ton of paper which was the maximum product per day. She was not young then, but a few years ago I was told she still held the same position in the same room, not much changed, a remarkable instance of the length of life accorded to the godly amid the dust of the rag room. The devil was no doubt sometimes troublesome in that room, but not in mechanical form; nor was his brother the rag cutter there. The only machine was a wire cylinder inclosed in a box; constructed apparently to give the least possible result for the labor expended, as it could be filled only by hand, and after sufficent rotation was emptied in the same way.

"The rag boiler was of copper, six by six. Wooden staves bolted on top doubled its depth. A fire underneath gave fair results when the smoke could be prevailed on to go up the chimney instead of coming out at the furnace door. Three small engines and two small bleaching vats in a dingy, cramped room afforded the pulping capacity. A huge over-shot wheel drove the engines and a small wheel of the same kind the machine—that is, when there was water to work them. The machine was one of the first imported to this country from England, and had done service in some Eastern mill. Its short wire and small drivers made about 25 feet per minute possible.

"John and William Kay, Scotchmen, afterwards widely known as skillful paper makers, were the only permanent skilled workmen in the mill. Occasionally, journeymen paper makers—'tramps,' as they were called in that day—would get a short job. Among those who obtained work while I was there was a young Scotchman, from whom I obtained a description of bleaching with chlorine gas, which enabled me to have constructed at the village shop a retort for its manufacture. With this I began experiments on various fibres, including straw. This young man was Adam Lowery, now a wealthy citizen of Cleveland, Ohio. I may add that the secrets of the paper trade were jealously guarded in those days, and the Kays regarded my disposition to inquire into them with anything but a friendly spirit. Receipts for sizing, color making and similar processes, were placed among the dark arts and sold for high prices, in some instances as much as $500."

Mr. Buchanan says that his thoughts were turned at the very first to the utilization of coarse materials. The extent of this field will be realized when it is recalled that there was no such thing then as straw wrapping paper, and that manilla rope was not used. Wrapping pa-

per was made mostly from the lower grade of rags, hemp rope and coarse bagging. "Scarcely anything now used in making wrapping paper," continued Mr. Buchanan, "was then turned to account. Lyman Hollingsworth soon after began to use manilla rope in making manilla paper. Straw wrapping paper did not make much show in the market until about 1850, and was of very small importance as late as 1845. Joseph Smart, who had a mill at Roslyn, Long Island, or in that vicinity was the first man that I know of making old printed paper over into new white paper. His water power was taken away from him when Brooklyn made her first water works, and he then went to Troy, where his sons now are."

Mr. Buchanan came to New York city in the spring of 1843, and obtained a situation with Charles Marr, a paper stock dealer at 4 Burling slip. He began business as a paper stock dealer on his own account in February, 1845, and in connection with this gradually built up a paper business. In the spring of 1848, in conjunction with Preston Warfield, he bought out Marr, the firm being Warfield & Buchanan. A few months later he sold out to Warfield, who, in 1849, went to California, and was subsequently stabbed and killed there by some Spaniards. In 1850 Mr. Buchanan bought an interest in the Empire Paper Mills at Rock City Falls, now owned by George West and then by Kilmer & Ashman, the firm becoming Buchanan & Kilmer. In 1852 Buchanan & Kilmer moved from 4 Burling slip, where their office had been from the start, to 107 Fulton street, and soon afterwards took into copartnership Ellsworth Cheeseborough and William H. Parsons. The name of the new firm was Cheeseborough, Buchanan & Co. Cheeseborough was bought out after a few months, and the name of the firm changed to Buchanan, Parsons & Co. In the fall of 1855 Buchanan & Kilmer sold out the New York business to Wm. H. Parsons, and confined their attention to manufacturing. At this time they were running several mills near Saratoga. In 1856 they dissolved copartnership, Buchanan taking the Empire mill and two smaller ones, and Kilmer the straw print mill at Rock City Falls. Mr. Kilmer still owns this mill, and has grown wealthy from the profits of it.

One of the two smaller mills taken by Mr. Buchanan was burned down in March, 1858, and afterwards rebuilt by him in conjunction with Solomon A. Parks, now of Glen's Falls, as a straw print mill. This was known as the Pioneer Paper Company Mill. It was burned in March, 1859, and upon its site Mr. West has since built one of his half dozen paper mills. It may be mentioned in this connection that about 1862 Mr. West bought of Mr. Buchanan the Empire mill, with its personal property, entirely on credit, but soon paid for it and built another mill. His neighbors manifested their approval of his enterprise by giving him political preferment, and he acknowledged the distinction by building another mill. These interchanges of compliments have been continued until at present Mr. West is a member of Congress, and the community is rendered prosperous by the possession of six or seven paper mills.

In 1863 Mr. Buchanan, in company with D. A. Bullard and others, built the mills at Schuylerville, N. Y., which they sold in 1870. The final chapter of Mr. Buchanan's history in connection with the New York paper trade, has been told in these columns with that of Perkins, Goodwin & Co.

In conclusion, however, it will be interesting to read Mr. Buchanan's account of the paper trade in this city in 1843, thirty-eight years ago. He says:

"When I came to New York, as you went down Nassau street the first house to meet in the paper line was that of John Priestly, at 116 or 120, and the next was John Campbell's, at 112 and 114. Just down Fulton street, between Nassau and William streets, was the house of White & Sheffield, and next door to that was Burnap & Babcock's. In Nassau street, just below John, kept Persse & Brooks. Turning down John, the first paper dealer to meet was E. B. Clayton. On the other side of the street, a little below, was Edgar J. Bartow. Below Gold street Thomas Vernon kept a little seven by nine place. At that time he and his brother Samuel used to drive their own wagon, and carry bundles about on their shoulders. Next below was Seymour & Co. At the corner of Water and Burling Slip was the warehouse of Cross, Bulkley & Gookin. At 5 or 7 Burling Slip was Peter Poillon, Jr. Two or three doors below Cyrus W. Field was just making his start, mainly in rags and wrapping paper. I remember that old Marr would not let me deliver a bundle of rags to him until he had paid the money for them. In Maiden Lane was Simeon Kirgsley. I think these were the only paper warehouses in a wholesale way then in New York."

SPATTER WORK FOR GROUNDING.

Some excellent background effects have been produced by Camille Piton by the application to china of the spatter principle. To those not familiar with that process we may say that it is done by dipping a common tooth brush into the color to be used and then rubbing it against a comb. This produces a very fine spray, which may be continued until a smooth ground of any color has been produced. Gold ground can also be produced in this way. If the spatter is only needed to fill in the spaces between the outlines of the design, before using the spatter the design must be cut out of paper and pasted on the plaque, it being thus used to stop out the parts not to be affected. Ferns may be reproduced in this way with excellent effect. It will readily be seen that by using two or more colors capital results may be obtained. For instance, by putting a very light blue ground and spattering on it some yellow, an effect of green will be produced which could not be had in any other way. This effect will be varied in accordance with the blue ground being wet or dry when operated on. This spatter process, though inartistic so far as the mechanical part of it is concerned, may be employed to produce very good effects in light and shade. Some of the best results we have seen have been with the use of water colors on silk and wood for fans and screens.—*Art Amateur.*

WAX VS. CLAY FOR MODELING.

Professor Richmond says that wax as a medium wherein to model will be found most handy. Unlike clay, wax needs no wetting; and as it can be worked with the utmost minuteness and finish, it is well adapted to designs upon a very small scale. Wax for modeling can be purchased, but it is dear. Anyone who will take the trouble to do so can make it for himself, thus: Heat gently linseed oil, tupentine and beeswax, but do not let them boil; add a little glycerine; a few experiments will show what is the proper proportion each ingredient should bear to the whole. When cool, the material thus made ought to be nearly hard; but, at the same time, by the heat of the hand, it should be reducible to a malleable substance, easily to be worked. Let us suppose for a moment that some one here has a desire to design a frieze of ornament. Having decided how high the relief of the design is to be, let him go and look at the treatment of such a quantity of relief in any Greek or Italian example he can gain access to. Then from the sketch-book store that he has gathered from Nature, let him arrange and put together his design, drawing it carefully and with due consideration for balance of the masses to be disposed in tranquillity, or in manifold minuteness of details upon paper. Having decided, considered and studied, let this drawing be traced upon a slate or board, and the wax laid on carefully in strips over the lines and forms of the design, leaving the flat surface of slate or wood as the background. In the modeling, as much as possible should be done with the fingers; there is no tool so good, so delicate, or so sensitive. But where fine incisions are to be made—so fine that the finger cannot accomplish them—a bone tool should be made use of, and this tool while in use should be occasionally dipped in oil, that it may work freely and not stick to or drag away the wax. If it should enter into the mind of any one to try this plan, he will find it a delightful pastime and a valuable study. But mind, do not do it roughly. Execute it delicately, finish carefully as you go, and take care to make the execution as perfect as

you are able. Not only as an exercise in relief may this be useful; but fancy may be employed on capitals of columns, moldings or what not, and invention and fancy may engage themselves in devising with pleasure. Design is very much a matter of habit It is always difficult to make a beginning. All first lines seem disheartening, and do so poorly represent anything at all that the mind conceives and desires to accomplish, that at first they seem futile. Do not be disheartened, but go on and try to do more; and the more you do, if you exert yourselves with a real will and strong desire to overcome all difficulties, easier and easier, more and more delightful you will find your occupation to become. Everyone does not command large rooms in which to work, so that any design upon a large scale would be objectionable. The advantage of wax is that it will bear to be used upon the minutest scale; therefore, any student with the smallest room would not find inconvenience from want of space wherein to execute his work.

HAS BEEN AWARDED THE

GRAND PRIZE GOLD MEDAL

AND RECOMMENDED THE

Medal of Honor and Perfection

At PARIS, 1878,

This being the **HIGHEST and ONLY AWARD** given for

LINEN RECORD and LEDGER PAPER.

—A SPECIALTY.—

THIS Paper has received THE HIGHEST PREMIUM over all others from *the Cincinnati Industrial Exhibition, Massachusetts Charitable Mechanics' Association, Franklin Institute* of Philadelphia, Louisville Exposition, Medal and diploma from *United States Centennial Commission, Medal of Progress American Institute, 1877, and Medal of Improvement and Progress, Boston, 1878.* Its

PRINCIPAL ADVANTAGES

are as follows:—1. It contains more LINEN than any other Ledger Paper, has a longer fibre, and is, consequently, tougher. 2. Having a harder and better body, it frays less in erasure, so that by simply using the rubber after the eraser, the ink is prevented from spreading. 3. It is more uniform in Weight Color and Finish. 4. It never cockles if properly bound. 5. Its chemical action upon ink is such that it both writes and rules up better. For proof of the foregoing, refer to a large number of Stationers, Bookbinders, Bookkeepers, and Recorders, who have given it, after a severe test, the preference over all others. This paper is *Double Sized*, and will stand any climate or the most acid of fluid inks.

☞ Send for sample sheet, ERASE and REWRITE FOUR TIMES on same spot.

Each sheet is water-marked with name and date.

CHICAGO NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

WESTERN OFFICE LOCKWOOD PRESS, NO. 8 LAKE-SIDE BUILDING, CHICAGO, Ill., March 19, 1881.

The last great snow storm is upon us, but the sunny days of the week have put business on a basis unshakable.

Cameron, Amberg & Co. report trade excellent, their files selling more rapidly than ever. The new "Popular" file, selling at $12 per dozen, list, meets with a good reception. All but one of the firm's traveling men are on the road, and he starts at once.

J. O. Blake, manager for John Wilkinson, says there has been no falling off in trade since Christmas. The games department, recently added by Mr. Blake to the regular archery and scroll saw department, has been meeting with more than anticipated success.

Edward Lovejoy, 88 State street, exhibits a fine selection of tasteful and artistic goods. Easels, exquisitely colored and plain, photographs and beautiful Easter cards are attractively displayed upon his counters. Mr. Lovejoy publishes a line of fine colored and plain views of Chicago in its various aspects. Among others, there is a view of the "crib," taken by Mr. Lovejoy from the ice this winter, the first time that feat has been accomplished during many years. Mr. Lovejoy sends a great many of these unmounted to Europe for albums.

Mr. Marshall, of Geo. E. Marshall & Co., returned from Florida on the 15th. Their new store is well arranged, with an excellent display.

Our new firm—Brown, Kelly & Co.—is now fairly started. Its business during the first week was far beyond expectation. Its bindery has been started during the week. It keeps a good line of the Livermore Stylographic pen.

Mr. Treleaven, gold pen manufacturer, 86 La Salle street, reports orders for two months ahead.

Mr. Kimball, of the Economy Company, has been sojourning in Michigan for two weeks past, and has had a most successful trip. He writes that, notwithstanding the numerous fountain pens in the market, he finds that the A. T. Cross holds its popularity and more, and that they are now sold in nearly every place of prominence in the State. Both the pens and the entire line of specials he carries have been very favorably received.

H. H. Unz, Western manager for E. Remington & Sons, has fitted out the editorial rooms of the Chicago *Times* with their improved type writers. The various improvements lately made in these machines tell very perceptibly in economy of time. They are meeting here deserved success.

Baker & Co., wood engravers, report good business, and excellent prospects.

F. H. Revell has just brought out a new book which is likely to meet with favor from the churches. It is entitled "Songs for the Service of Prayer"—octavo,—compiled by R. S. Thain. It contains all the good old hymns, and many new selections equally good. Price $60 per hundred. Introduction price, $50.

Chas. P. Willard, 20 La Salle street, sells a very cheap and efficient engine, which is meeting with good success among the printers. He has recently sold one four-horse to John Walk, Ames, Iowa, for running a cylinder press on the *Oriskany Falls News*, besides two others to a large printers' supplies house of this city.

The "Tuerck Motor," Tuerck Brothers & Johnston, run by hydrant power, is also meeting with a warm reception among printers and bookbinders. It is well adapted for running printing presses.

G. B. H.

BOSTON NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

BOSTON, MASS., March 21, 1881.

Business among the stationers has been only "fair to middling" during the past week, the wholesalers reporting a limited trade; but the jobbers have been quite busy in a small way, filling orders to keep up assortments. The weather continues to retard a good, lively trade, such as should be experienced at this season of the year.

Two weeks ago a Boston carper in a Sunday newspaper wanted to know Louis Prang's reasons for exhibiting the prize Christmas cards in New York rather than in Boston. Mr. Prang has not remained silent under the insinuations of his enemies, but sums up his reasons why his exhibition of prize cards was not held in Boston, although the firm of which he is the head has long been identified with this city, in the following laconic language: Because "New York offers to the results of such endeavors a larger, a more interested and a more sympathetic public, both as regards competitors and critics, judges and spectators." This answer to his carpers at the "Huh" certainly ought to be satisfactory.

Discussing or reviewing the criticism of those Boston artists who wondered why he went to New York with his prize cards, Mr. Prang says: "It is, perhaps, not in the nature of things that Boston amateurs should applaud or even appreciate the conscientious efforts of a chromo lithographer to popularize art and to bring its powerful influence to bear upon those uncultivated masses of our people who are in outer darkness. It is, perhaps, not to be expected that Bostonians of culture should interest themselves in the details of his endeavor to develop imperfect processes and to widen the legitimate field of his work and of all art work, or that they should manifest earnest sympathy in the gradual advances which he is making. In any case, it is a fact that this sympathy, this greeting of good fellowship, this practical and enlivening atmosphere of work and the appreciation of work, is not forthcoming in Boston; and further, that all of these have been and are found in the eager and earnest life of New York. To this fact many art students can testify from experience. The reproach—if it be a reproach—is not one which comes from individual feeling alone."

Apropos, on account of their constantly growing business, Prang & Co. are adding to their already extensive establishment, and in a few weeks the firm will have better facilities for the prosecution of certain kinds of work.

Literary Boston, as well as artistic Boston, is being moved to its centre on account of the recent *Atlantic Monthly* breakfast which was given to its new editor in New York instead of in Boston, although the latter city is the home of that magazine. Is the literary power of Boston declining? Are we in the midst of a literary and intellectual transition, and is New York about to step to the front as the best the country has in culture? During his editorship Mr. Howells did not find his writers chiefly in Boston or its vicinity. Years ago, nearly all the *Atlantic Monthly* writers lived near the office of that magazine, and they used to loiter at the "old corner book store." The Augustan period in New England literature is passing away, just as its most distinguished political writers have passed away.

A decided run is being made on scrap books and autograph albums, caused by a dealer here having purchased the entire stock of a New York manufacturer at "dirt cheap prices."

A Washington establishment which deals heavily in haberdashers' goods has suddenly broken out with the book business, selling popular works way below the publishers' prices. It is a mystery how money can be made at ruinous prices.

The Easter card trade will culminate in a few weeks. Easter cards, with silk fringes, are proving very attractive among the trade, and some kinds have already begun to run short. Prang's series of cards in the shape of heavy mounted panels are very desirable. Their nineteen series of Easter cards, comprising some 140 designs,

put up in packages of a dozen each, with envelopes and protectors, cost only $200.60 at retail for some 564 cards, the prices ranging from $12 to 35 cents per set. These Easter cards are the cheapest specimens of really artistic work ever produced in this country.

A duplicate of the original "Poor Richard's Almanac," published by Ben Franklin in 1758, has been issued by an insurance company.

A School street merchant tailor has issued a valuable pictorial diagram of the Boston, New York and Philadelphia theatres.

THE STATIONER is more popular among the trade in Boston than ever before. L.

PHILADELPHIA NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

PHILADELPHIA, Pa., March 22, 1881.

The sale of Easter cards is now such an important feature in the stationery trade that it seems to me fitting to make it the subject of special study. This letter, therefore, will be devoted chiefly to its consideration, reminding your readers that my remarks are only pertinent to Pennsylvania. During the holidays an enormous quantity of cards was sold, the demand having tripled with most of the houses I visited. Valentines had a still greater success. The increase in sales reached the point that orders were given until many of the trade were unable to obtain the quantity of goods that they could dispose of. This time, taking counsel of their past experience, they have ordered Easter cards in much greater proportions, so that the orders given for these goods are in some instances altogether beyond imagination. One fact to note is that the most costly sell the best. Marcus Ward, Prang and Thos. Dando are our great purveyors, and I shall therefore have most to say about them.

Marcus Ward has a superb assortment of Easter and of birthday cards, among which the following mentioned are specially worthy of remark:

No. 6,230—Four designs of floral crosses, on mediæval illuminated background; size, 4¾x7⅛ inches; price 15 cents each, with envelope. No. 6,242—Three exquisite white floral designs, falling on dark shaded background, with light border; size, 6¾x3½ inches; price, 15 cents each, with envelope. No. 6,248—Six folding cards, with conventional designs on the back, and beautifully executed designs of flowers and butterflies, and appropriate Easter texts inside; size, open, 5½x6½ inches; price, 15 cents each. No. 6,255—Four designs, consisting of a crown of thorns and a wreath of flowers, on medium background. This series is particulary emblematic of Easter. Size, 3¾x5¼ inches; price, 15 cents each, with envelope. No. 9,260—Four folding cards, with floral designs on gilt ground, and highly illuminated Scriptural text, and suitable outside; size folded, 3⅞x6 inches, price, 25 cents each, with envelope. No. 9,267—Four magnificent designs on light-shaded background, consisting of Easter flowers on gilt cross, and bordered in light blue; lettering in gilt, with light blue edging; size, 4⅝x6¾ inches; price, 25 cents each, with envelope. No. 9,295 F—Six designs, same as No. 4,295, with suitable back, and fringed with white silk fringe; price, with envelope and protector, 25 cents each. No. 12,256 F—Four designs, same as No. 4,256 a, fringed in white, with suitable back; price, with envelope and protector, 35 cents each. No. 12,-215 F—Six designs, same as No. 6,215, fringed in white, with suitable back; price, with envelope and protector, 35 cents each. No. 18,242 F—Three designs, same as No. 6,242, fringed in white, and with suitable stiff back; price, with envelope and protector, 50 cents each. No. 24,-256 F—One card, comprising the four designs of No. 4,256 a, in book form, with white silk fringe and tassel; price, including envelope and protector, 75 cents each. No. 48,267 F—One card, comprising the four designs of No. 9,267, in book form, with white silk fringe and tassel; price, including envelope and protector, $1.50 each; this card is one of the richest ever made.

The fringed cards are most in demand. The chenille fringes are Marcus Ward's great novelty, and give the cards a very elegant appearance. Mr. Ireland, Marcus Ward's manager at Philadelphia, says that the difficulty is not to take orders, but to fill them, for as fast as goods arrive they are sold out. It is needless to say that this house has done a big business this season.

Thomas S. Dando & Co., representing M. De la Rue & Co., also have a very beautiful selection of cards, among which I may mention: No. 374—"Easter Day," careful and elaborate reproductions of water color compositions, embodying the religious associations of the season; each card bearing an appropriate legend; three varieties; unmounted, $3.20; mounted, $4.20. No. 417—"Daughters of Heaven," exquisitely tender and beautiful embodiments of celestial innocence and purity, after original drawings in water colors; each card imprinted with a religious sentiment; three varieties; unmounted, $3.20; mounted, $4.20. No. 416—"Halcyon Days," carefully executed chromo-lithographs, after original water color drawings, of infantile processions, typical of the advent of Peace, Plenty and Love upon the earth; each card bearing an illustrative text from Scripture; three varieties; unmounted, $2.80; mounted, $4.20. No. 419—"The Carpenter's Son," elaborate renderings by chromo-lithography of original water color compositions representative of scenes in the early life of the Saviour; each card inscribed with a quotation from Scripture; three varieties; unmounted, $2.40; mounted, $4.20. No. 418—"The Good Shepherd," highly wrought chromo-lithographs, after original water color studies in sacred art, each embodying a thoughtful and artistic conception founded on a text from Scripture; three varieties; unmounted, $2.40; mounted, $3.60. No. 100—"Easter Studies," highly finished chromo-lithographs, from unique designs of a devotional character; three varieties; unmounted, $1.60; mounted, $2.50. No. 155—"Angelic Ministrants," brilliant chromo-lithographs, in gold and color, after original water color compositions, of a sacred character, each inscribed with a religious precept; three subjects; $1.60. No. 420—"The Seraph Choir," choice and attractive chromo-lithographs, after original sketches in water color, symbolic of the sacred associations of the season; each card bearing a religious couplet; three varieties; $1.60. No. 82—"Symbols of Faith," handsome chromo-lithographs, after original designs, each illustrated by a verse of a devotional character; three varieties; $1.60. No. 83 D—"Easter Eggs," brilliant chromo-lithographs, in gold and colors, of an egg, with appropriate verse for Easter; three varieties; $1. No. 179 D.—"Shadow of the Cross," highly finished chromo-lithographs, in gold and colors, after original water color compositions, of a devotional character, each illustrated by an original sacred couplet; three varieties; 50 cents.

Their birthday cards, with fringe, are of the most beautiful character, and make an artistic and exquisite display. Sales of these are constantly increasing. Space is wanting to write of the large and beautiful assortment of these goods which this house carries. Mr. Dando is now in Europe, where he went to select his holiday cards. If it was not indiscreet, I could tell you of certain marvels which he will have ready for next season. The only thing that I can say is—nothing as handsome or as rich has yet been sold in this country. Mr. Dando does well to concentrate his efforts on these fine goods, as they are the best to sell.

Mr. Kimball, manages the Philadelphia house of L. Prang & Co. Prang's cards are so well known and appreciated that they sell with ease in this part of the country, and do not need to be seen to be disposed of. But I must speak of them to complete this review. I may mention the following: No. 1–1—Daisy Eggs, $7.20 per doz.; with fringe, $12. No. 2–1—Easter Dove, $6 per doz.; with fringe, $12. No. 3–2—Easter Chariot, $3 per doz.; with fringe, $6. No. 4–2—Flowers (folding), $3 per doz.; with fringe, $6. No. 6–4—Iris Designs, $2.40 per doz.; with fringe, $5.40. No. 9–2—Easter Lily, $2 per doz.; with fringe, $6. No. 11–6—Easter Crosses, $1.50 per doz.; with fringe, $4. No. 11–D—Easter Crosses (in book form), $4 per doz.; with fringe, $9. No. 15–4—Floral designs on moss ground, $1.20 per doz.; with fringe, $3. No. 17–2—Flowers and Butterflies, 75c. per doz.; with fringe, $2.40. Mr. Kimball has enormous orders for all of these cards, and can take only a limited number of new orders, and even these must be given soon if buyers want to be certain of getting the goods in season.

T. Sinclair & Son, of Philadelphia, are publishing a line of elegant designs for advertising fans, five in number, which for beauty and elegance of design have not been surpassed in this country. No. 1, "Cupids and Lovers," represents two cupids by an antique column in the act of raising a curtain which discloses in the distance a lover who on his knees is wooing the lady of his choice. The subject has been very delicately treated by the artist and looks very attractive. It is lithographed in six colors. No. 2, "The Four Seasons," shows in four ovals figures of cupids with surroundings appropriate to each season, while the outside of the design is elaborated with two peacock feathers which form the border. The subject was painted by C. H. Stephens, of this city, and is in eight colors. No. 3, "The Meeting at the Stile," represents in a diagonal panel a young hunter just returning from the chase who at a stile chances to meet a young and beautiful girl, his lady love, and here he pleads his case, his hound looking on in sympathy. Below the panel is a moonlit winter's night scene, and above the panel is a scene of a forest at night with the falling snow. The contrast between the panel, which is a bright summer scene, and the wintry view in the others, gives the picture a very striking effect; lithographed in two colors, painted by E. B. Bensell, of Philadelphia. No. 4, "The Fountain of Beauty," has for a centre piece an antique fountain; on the left a mass of flowers, and on the right a beautiful young girl, who comes to the fountain to drink, &c. This design is in twelve colors, and its greatest recommendation is to say that it was painted by the celebrated New York artist, J. C. Beard. No. 5, "Cupid Teaching the Birds," is a very elegant design, also by J. C. Beard, of a cupid, seated on an apple branch in full bloom, playing a flute. His music charms and teaches the birds, several of which are gathered on the branch in the foreground, listening to and imitating his music. The groundwork is in gold, and the whole is a masterpiece of work, and is a chromo-lithograph in fifteen colors. These designs are all copy-

righted by J. C. Sinclair, of the firm of Sinclair & Son, and are arranged with a space for a small advertising card and fitted with a polished imitation ebony handle. They are for sale by Robert Gair, 161 Chambers street, New York. This firm in its chromo card department, under the management of Geo. M. Hayes, is producing many new and original designs of chromo cards, which may be mentioned in another letter.

Postdamer & Co. have a good demand for their folding and single advertising cards. They have one hundred and twenty-five designs, which they make in twenty-two different sizes. These cards cost less than one-half the price of the same grade of goods in steel, and are equal to them in design and finish. No tints or colors are used for the effects, but the work is engraved and etched similar to steel, and printed in black. Their chromo advertising cards are also very handsome. They are much pressed to fill the orders which they have received not only from the United States but also from England, France and Germany, where they have agencies. They are represented at New York by A. M. Collins, Cope & Co.

Theo. Leonhardt makes a specialty of French cards, which are of an interesting character, but which the length of this letter prevents me from describing just now. His branch house at Boston is said to be doing a good business, and at San Francisco, where his agency is located at 721 Market street, he is taking very large orders.

Crosscup & West, engravers on wood and photo-engravers, are still crowded with orders. They have increased their working force, and would like to increase it still further; but first class engravers and artists are scarce, and as Crosscup & West do only the highest class of work nothing but the best workingmen could answer their purpose. They have a new process of engraving for which a patent has been lately granted to Mr. Ives, the inventor, and with which they can make relief plates (engravings) direct from nature or from an artist's drawing or photograph without the use of a pen drawing or the services of the engraver. A process of this character has been long sought after and many times attempted, but has never been successfully accomplished except by Mr. Ives. Crosscup & West are not yet quite ready to receive orders, but are making arrangements and will soon be ready to do so.

J. VIENNOT.

LOUISVILLE NOTES.

[CORRESPONDENCE OF THE STATIONER.]

LOUISVILLE, Ky., March 12, 1881.

Some people may imagine business is dull here, but I am able to dispel the notion. Look at the display of Easter cards, watch the little ones at the shop windows and hear them exclaim: "Oh, Tommy! ain't they pretty?" Prang's, Hildesheimer's, Gibson's, and many others, are found in the show cases. They all try to outdo each other in producing a "thing of beauty."

Bradley & Gilbert have made some very important changes. They have added the premises adjoining, and are fitting up in very fine style. Since early in January the carpenter's hammer has been sounding, and each day reveals the near approach of the finishing touches. The walls are faced with walnut shelving of a very fine description, everything corresponding, being very unique and beautiful. As soon as completed, the present premises are to undergo the same change. Everything is expected to be in readiness for the fall trade. There has also been a change in the firm. It was formerly composed of James Bradley, James C. Gilbert, P. D. Mallory and William B. Rogers. Mr. Rogers retires, and the firm will be Bradley, Gilbert & Mallory. Mr. Rogers goes to New Orleans to take charge of the Southern News Company's business. Many will be the regrets at his departure, not alone among his many friends in Louisville, but among the traveling salesmen. He was always approachable, and bought whenever goods were required. I join with the many who may call at their office during this year in hoping that Mr. Mallory will indulge the many callers he may have. Business has been very good.

W. Scott Glore reported business as fair and having had an unusual fine holiday business, disposing of all the fine imported goods.

Caperton & Co. are looking for a young man thoroughly posted on books and having some capital, to whom Mr. Caperton will give an interest in the business. One with energy, competent to take entire charge of the business, is wanted, as Mr. Caperton is editor of two religious papers, and consequently his time is fully occupied. This might be a good opening for a man with the required ability.

J. P. Morton & Co. had a very fine holiday business, and thus far this spring it was exceedingly satisfactory. Their drummers have been on the road early this spring and have done well, with the exception of Kentucky, where the roads are still impassable. They make a very good display of fine stationery.

Thomas Royall reports business as quite fair, but might be doing better. The valentine trade had not received the boom it had elsewhere.

Chas. A. Rodgers, who has the Catholic book trade, says business has been very good. It appeared strange to me to hear him remark: "I don't handle Easter cards." He says his customers do not buy them.

The Bremaker Moore Paper Company is quite busy and very satisfied with the outlook.

Lent and the bad weather have withheld the impetus required to make the retail book and stationery business first class; but we hope bright days will soon come, and with them the bright faces of the fair ladies who make the hearts of the shopkeepers glad.

LEONIDAS.

BALTIMORE NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

BALTIMORE, Md., March 22, 1881.

St. Patrick drove the snakes out of Ireland a long time ago, thus testifying his consideration for the people of the Emerald Isle; but he evidently cares nothing for those who have crossed the sea and taken up an abode on this side of the Atlantic. He spoils their parade as regularly as the 17th of March comes around, and he drives customers from our cities as effectually as he drove the reptiles from the fair fields and hills of the land of which he is the patron. At least, so it seems here. Ever since the date of his anniversary it has been anything but inviting outdoors, and business, both wholesale and retail, has worn a somewhat gloomy appearance. It was far better during the days preceding the festival, and will be good again when the St. Patrick's rains cease.

Dobler, Mudge & Chapman's business has much improved since they moved into their new store, and they are correspondingly glad they made the change.

Smith, Dixon & Co. report their business, especially in the bag department, as far ahead of last month, and the fine stationery and engraving trade, reported by W. L. Stork & Co., and Guggenheimer & Weil and others, is correspondingly good.

Guggenheimer & Weil recently prepared for our German citizens a magnificent *menu carte*, which was used at a banquet given at Barnum's Hotel in honor of Carl Schurz. The name of each invited guest was written on an embossed card, pasted on the back of the bill of fare.

The other members of the trade—booksellers and stationers—embracing Cushings & Bailey, John B. Piet, W. E. C. Harrison, the Baltimore News Company, W. J. C. Dulaney & Co., J. W. Bond and others, are unanimous in the assertion that business is no worse than this time last year, notwithstanding the set-backs occasioned by the heavy rains.

Dell & Knapp have two bookbinderies, and in both business is on the rush, and Edwards and Dickey also report brisk work.

James Young & Co., printers, are preparing a handsomely illustrated 8vo. volume for Hon. George Colton, police commissioner, and editor of the *Maryland Republican*, of Annapolis, recounting that gentleman's recent trip through Europe.

Kreuzer Brothers, booksellers and publishers of the *Katholische Volks Zeitung*, are among the unfortunates who have had to vacate to make way for the site of the new post office. They are now moving into the warehouse which they recently built on Calvert street. Hoen's lithographic and engraving establishment is also vacated, though not because the proprietors were compelled to go. They put up a new building on Lexington street, opposite the City Hall, their increasing business inducing them to venture on the change. The new establishment is a great improvement over the old one, and an ornament to the section in which it is located.

Alfred Kurtz, T. N. Kurtz & Son, has just returned from a successful trip West.

The printing office of John B. Piet is now very busy on book and railroad work. The printing department of this house has not been so prosperous for many years, owing, no doubt, to the fine business qualities possessed by Mr. Piet and his ever active son, John B. Piet, Jr.

Representatives of the trade have been in town as follows since I last wrote you: Joseph M. Hennessey, of the firm of Burns & Oates, London; J. R. Hope, of Prang & Co. (whose assortment of Easter and birthday cards are pronounced the finest ever seen here—far ahead of the same firm's beautiful Christmas and valentine designs); Samuel Hand, of Boston; Wm. A. Davis, Treasury mucilage manufacture, Boston; A. C. Veiller, for Henry Levy & Son, album importers, New York; Henry Macourt, for E. P. Dutton & Co., New York; Wm. Tatlock, for Lee & Shepard, Boston; H. G. Teele, for Morrison, Bare & Cass, paper manufacturers, Pittsburg; T. A. Gill, for A. & E. Wallach, New York (soliciting import orders), and C. Chalon, of Mayaud Brothers, dealers in religious articles and pictures, Paris, France.

W. P. M.

WASHINGTON NOTES.

[CORRESPONDENCE OF THE STATIONER.]

WASHINGTON, D. C., March 19, 1881.

As all the world knows, Washington was one of the most densely populated places in this country during the first few days of the current month. Several hundred thousand visitors have come and gone, many of them for the first time making their acquaintance with the glories of the capital. To say the least, most of them were astonished (as well they might be) at the appearance of this always fine city, but on this occasion grandly arrayed in her best holiday attire. The authorities and citizens deserve the greatest credit for the splendor and the excellence of

their arrangements, and everything passed off in the best possible manner. Since Inauguration Day business has been exceedingly brisk, the book and stationery trades getting a good share of the cash brought and left here.

Although it's rather an old subject now, I may as well remark that the last valentine season was by far the best we have ever experienced here. It is no exaggeration to say that the trade were astounded, one and all, at the demand for valentine cards, especially for those with silk fringes. Everybody's attention seemed to be directed to these goods this season, as the designs were most elegant and novel, while the verses were either beautiful, chaste or witty—or all combined. It seemed as if the artist and the poet had gone into partnership to produce what at once became the wonder and delight of young, old and middle-aged of all conditions and both sexes. The young wanted them to send to their little playmates, the little cousins, and even their little brothers and sisters; the love-stricken youth bought them to gently entice some particular fair one to the altar (halter); and the elderly bought them for their intrinsic beauty to present to their children or to send as friendship cards to those they esteemed—in fact, everybody seemed to take to them here, many of the purchasers appearing to be members of that numerous and constantly increasing class who have made fancy card collecting the most fashionable pastime of the day. The American valentine cards, as I predicted in my former letter, were the most admired. The trade had bought very largely, especially of silk-fringed cards, yet the final results were in every case the same—all reporting to the same effect: "Bought very largely; had to re-order repeatedly as long as season lasted; completely sold out; not one left."

Ever since the beginning of December there has been a perfect rage, craze or mania (whichever you like to call it) for all sorts of tasteful designs in fancy cards. The birthday card trade has lately assumed a most important position. Patterns between 25 cents and $2 each are mostly in demand here—the public having got quite above the lower prices, such being considered now only fit for children. So that the amounts drawn for such goods have increased amazingly. As with the valentines, it is the fringed kinds that are in greatest demand.

Speaking of birthday cards, reminds me of Easter cards. The book stores made a great hit last season in those goods. Prang's Easter Lily at 50 cents each was the leading favorite, and sold beyond all precedent. One firm in Washington claims to have sold over one hundred and eighty copies at retail alone, but could have sold considerably more had it not been repeatedly sold out. And so the Easter card trade got thoroughly established here last season. As last year's experiment turned out such a complete success, the dealers have bought very largely for this season, Prang, as usual, getting the lion's share of the orders. I have seen his new samples, and they are a surprise. He has apparently three or four times as many good things as he had during the valentine season, and they seem even better value too. He has perfectly magnificent designs, entirely new, in both Easter and birthday cards; most of the patterns are repeated in fringes of the most lovely and delicate tints, many of them being delightfully perfumed. Particular care has been taken to attain perfect harmony by adapting special colors or tints to particular designs. No doubt we are going to have a big season, in Easter cards, which will completely dwarf our experience of last year.

A word about that license system in vogue here. I think the following shows its injustice quite as much as anything that can be advanced against it. One of our booksellers informed me the other day that the amount of license paid by him was $16 per year. Now, traveling salesmen are mulcted to the tune of $200 for the same period, for the privilege of endeavoring to obtain orders here during a few days in the year. Now, if they were only taxed in the same proportion as resident storekeepers, commercial visitors to this city would have little reason to complain; but the object of those who maintain this odious tax is nothing less—so far as traveling agents are concerned—than prohibition and annihilation. MERCATOR.

OHIO NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

DAYTON, O., March 21, 1881.

Part of "gentle spring" is here—*i. e.*, the "hail." The balance is due, and will probably arrive on June 1.

Trade is not very good—in fact, it is in the *statu quo* state. We expect improvement soon. Give old Sol a chance for a day or two on our roads, and we will be all right again.

Our city is fast becoming a central point in the great narrow gauge system. We have direct communication to Southeastern Ohio, and will soon connect with the Chesapeake and Ohio R. R. A narrow gauge road is being built to Cincinnati, and one to Toledo and St. Louis. When all are complete we will be a central shipping point to about 1,300 miles of this style of railway.

Travelers are getting scarce, and their only resemblance to the angels is the scarcity of their visits. C. E. Hopkins, with Barnum's prodigality of promise, has the greatest show of albums on earth. Joking aside, he has a very fine line, and he tells me that he is going home with more orders than any one in the trade.

A change has been made in the partnership laws in this State that may be of interest to some of the Eastern merchants. Whether or not it will hold good before the courts is to be seen. The Richards partnership bill, which passed the Ohio Senate last winter, passed the House on Friday. This bill makes partners liable only for the amount of their investment in any concern and not for the whole amount of their respective and individual assets. It is a measure that is looked on as one of the most important of the winter and one that will materially improve business

Among other goods selling well this season are transfer pictures. Papeteries, autograph and photograph albums, velvet frames, are slow of sale.

The mills throughout the valley are full of orders, at fair prices; news and book paper are rather weak at quotations, viz., 6½ cents commom news, 7 cents all rag news, book 8 to 10 cents; straw and rag papers are steady at a shade under the prices fixed at Chicago.

H. E. Mead & Co. will move one door west of their present location, needing increased room for their goods.

R. S. Rogers & Co. report trade in spring specialties—paper butter plates and berry buckets—much better, the advance in wood plates helping the sale of paper ones.

Robert Dix, for many years in the employ of John H. Thomas, has accepted a position with Reynolds & Reynolds, and will travel East in their interests.

The Holden Manufacturing Company report trade as good. C. E. Conover is representing it on the road, and reports a good trade in its specialties.

A. Sharpe has sold his "trade palace" to Lambert & Cloch, of New York, who are putting in a large stock of staple dry goods and notions.

The outlook for a good wheat crop, which is one of our main sources of wealth, is promising throughout the MIAMI VALLEY.

JAPANESE POSTAL SERVICE.

In 1871 the European system of postage was adopted, in a manner which, we are assured, has won the admiration of all foreigners. Prior to this there did not exist any national system of postage, owing to the feudal disposition of the country. If any one would wish to realize the primitive condition of post office service in 1863 they may turn to a picture in the "Capital of the Tycoon," of a postman in native costume—that is, with a loin band only, to leave his limbs free, running along the high road at speed, and a small box slung by a pole over his shoulders; and in case of his falling lame or other accident, he is accompanied by a double, to take on the package in his place to the next stage. The government used to dispatch such messengers, and occasionally private firms. The comparison with what now exists carries us back many centuries, though only the work of five years. There are now mail routes of more than 30,000 miles in active operation and 691 post office, besides 124 receiving agencies, 836 stamp agencies, and 703 letter boxes. The number of letters forwarded in 1876 was 30,000,000, being an increase of 94 per cent. over that of 1874, according to Mr. Mounsey's "Report on the Finance of Japan." The postage of an ordinary letter in the large towns is one cent (½d.) and two cents (1d.) for the rest of the empire. Post cards are carried for one-half these charges. And in 1875 a money order system was adopted, and within two years there were 310 post offices where the orders could be obtained and cashed. And this is the country where, ten years before, the chief thought was how foreigners could be best expelled or exterminated, and all their pestilent innovations sent after them!—*The Contemporary Review.*

No. 219 OLIVE STREET, ST. LOUIS.

L. PRANG & CO.'S
Easter Cards for 1881.

We take pleasure in herewith presenting to the trade our Price List of Easter Cards for this Season:

ASSORTMENT.—Our Easter Cards are made up in sets of one dozen, except Nos. 11 to 19, and are put up in a box or envelope. Each set contains all the designs of the series; and as no series has more than six designs, each design is more or less repeated in the set.

ENVELOPES.—Fine Cream-Tinted Envelopes are furnished with every series, without extra charge.

EASTER CARDS, WITH SILK FRINGES.—We would call especial attention to these, as they will doubtless prove very attractive. These goods are made up with the best quality heavy silk fringe, made expressly for us. All fringed Easter Cards are furnished with Protectors and Envelopes, and are put up with assorted colors of fringes.

The MacKinnon Pen or Fluid Pencil.

FULL LENGTH, POCKET SIZE.

FULL LENGTH, DESK SIZE.

Patented March 21, 1876; January 21, 1879; Reissued July 15, 1879. Patented July 29, 1879.

THE COMMERCIAL PEN FOR THE AGE.

The Only Successful Reservoir Pen in the Market.

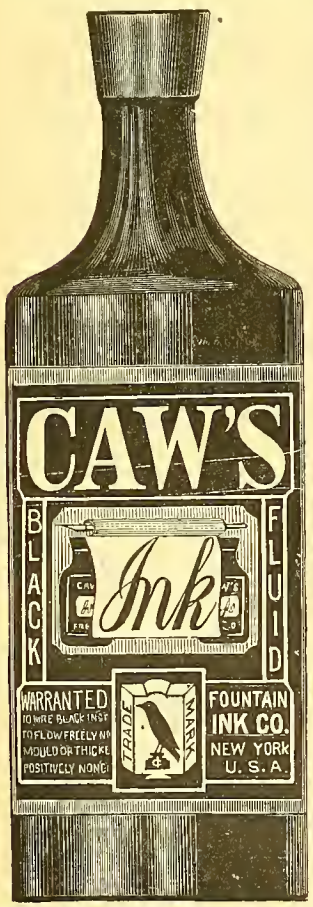
THE ONLY PEN ever made with a CIRCLE OF IRIDIUM (DIAMOND) around the Point.

THE ONLY PEN accompanied by a WRITTEN GUARANTEE from the Manufacturers.

THE ONLY RESERVOIR PEN supplied with a GRAVITATING VALVE. Others substitute a SPRING, which soon gets out of order.

THE ONLY PEN that will stand the Test of Time.

The above are FACTS which it behooves every man in the trade to know. Enough said.



Bottle for Quarts, Pints, 8 oz. Packed One Dozen, in cases.

CAW'S BLACK FLUID

Is the only known Ink that is

Positively Non-Corrosive to Steel Pens.

Flows freely; does not thicken by exposure, and has the decided advantage of writing **BLACK AT FIRST.**

— WARRANTED —

To Write Black Instantly.

To Flow Freely.

Not to Fade.

Not to Mould.

Not to Thicken.

Not to Corrode Steel Pens.

☞ A Copy of the above is printed on all labels for **Caw's Black Writing Fluid**. for the purpose of attracting attention to each especial feature claimed. This is done to facilitate its introduction, and that the consumer, when using, may notice its merits, and thereafter use it in preference to the unsatisfactory thick, black inks, or pale, green writing fluids of the past.

NEW STYLE OF STANDS.

Packed 3 dozen in Case.

The above is the exact size of No. 1 Stand. No 2 being twice this size.

FOUNTAIN INKS.

These Inks are expressly prepared for use in Fountain Pens. Put up in two sizes of bottles. No. 1 containing the same as cones or other styles of bottles generally sold as 3 oz., the Stopper arrangement being very convenient for both Fountain and other pens. No. 2 is twice the size of No. 1, and has a new device for filling Pens that keeps the Bottle always corked and free from dust, even while open ready for use.

FOUNTAIN INK CO., Manufacturers, 200 Broadway, New York.

DE LA RUE'S

1881. EASTER CARDS 1881.

THE SATIN AND MANUFACTURED SATIN SERIES A SPECIALTY.

MYERS BROTHERS, Direct Importers, 62 JOHN STREET, NEW YORK.

A full sample set of Easter Cards, being three cards of each series, and one of each design, in all sixty-nine cards for $12.50. Twelve satin samples, being three of each series, and one of each design of the four series, for $3.60. An envelope is sent with each card.

DELANO'S

RAILROAD Red Rubber Bands and Rings. COMMERCIAL

THESE goods are put up in bulk, each box containing a pound, thereby saving the expense of putting them up in gross and great gross packages, and are designed for use by parties consuming large quantities. These goods are very popular with **STATIONERS DEALING with LARGE CORPORATIONS, &c.**

THE SIZES ARE AS FOLLOWS:

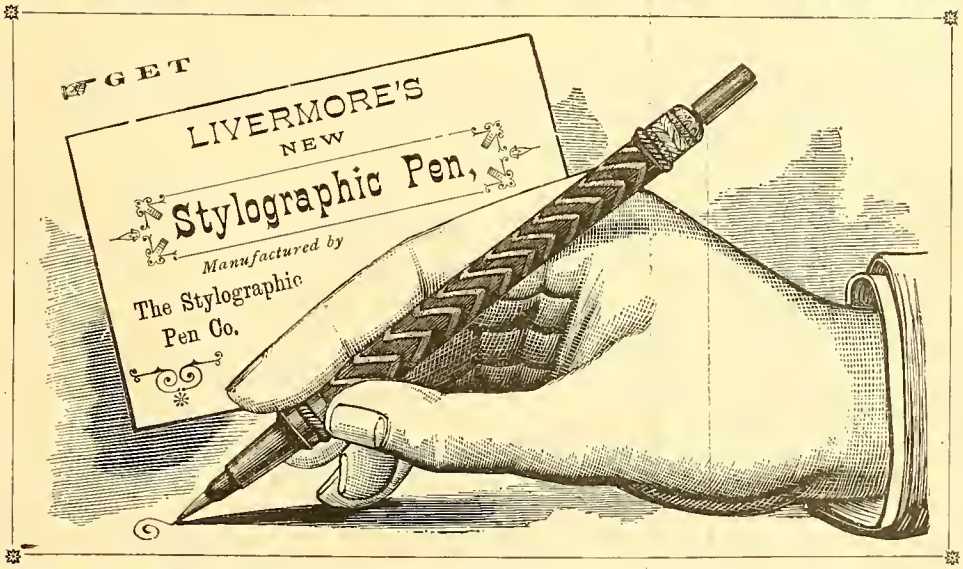
Elastic Bands. Nos. 27, 28, 29, 30, 31, 32, 33, 0¼, 0½, 0¾, 00¼, 00½, 00¾, 000¼, 000½, 000¾, 0000¼, 0000½, 0000¾.

Nos. 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20 and 50. **Elastic Rings.**

P. O. Box 1337. Z. DELANO, Boston, Mass.

IF YOU WANT THE BEST STYLOGRAPHIC PEN,

The Latest and the Best. Circulars on application.



Examination Solicited and Satisfaction Guaranteed.

The attention of the Trade is called to the improvements made and advantages offered in Livermore's New Stylographic Pen.

Patented July 15, 1879, and March 9, 1880.

FIRST—**A Smaller Air Tube**, allowing more space for the ink, and rendering the operation of filling easier and less frequent.

SECOND—**The Manner of Fastening the Needle**, not to the air tube, where it would be in danger of being bent or injured every time the pen was filled, but in the point, where it is not so exposed.

THIRD—**The Protection of the Spring** by a silver casing, preventing the ink from clogging its action.

FOURTH—**The Duplex Interchangeable Point Section**, furnishing great facility in cleaning the pen.

FIFTH—**The Ease with which Repairs can be Made.** The needle being in the point, it is not necessary to send the whole pen to the factory, but any dealer can supply a new point.

SIXTH—**Freedom from Legal Difficulties.** The New Stylographic Pen is manufactured under the patent controlling the use of an air tube in a Fountain Pen, and it is therefore free from legal complications.

C. F. A. HINRICHS,

☞ Send for Price List. *29 to 33 Park Place, New York.*

PERFECTED STYLOGRAFIC.

The original and genuine Pen. Warranted the best made. Thirteen Patents granted to **A. T. CROSS,** the last, June 29, 1880, being the most important and giving the name **Perfected.** All cuts are exact size

MAXIMUM.—Holds most ink of any pen made; tires the hand less than smaller barrels. Fits Hambler's Pocket. Same price as Long.

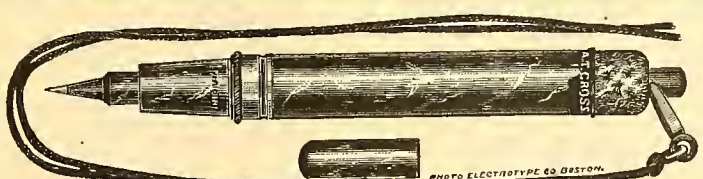
LONG.—The famous Desk Pen. Extra long. Holds most ink, except the **Maximum.**

SHORT.—Most widely known and sold heretofore; but Maximum is better for desk

or Hambler's Pocket, Giant for Vest Pocket or Cord. So this will be largely superseded.

Thirteen patents granted; seven more applied for; more genuine improvements; better record; more styles; larger stock; more thoroughly protected by patents than all rivals combined.

☞ See Descriptive Circulars.



GIANT, with Cord and Gold Ring, same price as Short.

Dealers and agents supplied with wood, glass and paper signs, placards, circulars, leaflets and cuts. We make both largest and smallest Pens, both of which will have all new improvements.

☞ See Descriptive Circulars.

VEST GIANT, Plain, - - $2.50.

All Styles up to $4.00.

☞ **VEST GIANT.—The Cheapest PERFECTED Pen made.**

This Miniature Cut is for Agents' Cards, Newspaper Advertisements, &c., &c., &c.

Trade Gossip.

All new goods and designs which are not, strictly speaking, "Novelties" will be noticed under this head. The trade are requested to forward descriptions with samples in order to secure proper notice.

Hard & Parsons' goods are meeting with remarkable success.

Herman Vespermann, dealer in notions, St. Louis, Mo., is dead.

George W. Wedmer, printer, Auburn, Ind., has sold out to Rainier & Houser.

Edwin J. Lamb, newsdealer, &c., Hartford, Conn., has made an assignment.

F. A. Warfield, dealer in fancy goods, Stafford, Conn., is offering to compromise.

A. M. Moon, publisher of the *News*, Marcellus, Mich., has removed to Dowagiac, in that State.

Henry E. Wedelstaedt, of the St. Paul Book and Stationery Company, is in the city on a short vacation.

Macauley Brothers, Detroit, Mich., had an Easter card opening yesterday, and issued invitations thereto. A good idea.

Molton & Co., Montgomery, Ala., have sold out their entire business in books, stationery and musical merchandise to Holt & Crawford.

Henry Levy & Son's representatives left this city on Monday to take import orders for the fall season from the trade throughout the country.

The Frank Coker News Company, Talladega, Ala., has sold out the *Bulletin* to the *Bulletin* Publishing Company, and will soon begin the publication of a new serial.

The firm of W. G. Johnston & Co., stationers and printers, Pittsburg, Pa., has been dissolved by the retirement of Joseph Eichbaum. W. G. Johnston continues under same style.

John Glen, representative of Marcus Ward & Co., London, arrived from the British metropolis a week or ten days ago, and has taken a run over here from Philadelphia for a few days.

A fire occurred on Monday night on the third floor of the four story brick building No. 37 John street, New York, occupied by John Sneider, printer and engraver, and did a damage to the stock of $500 and to the building of $300 The cause of the fire and the insurance are unknown.

L. A. Lipman, whose illness at Adrian, Mich., has been referred to, is still at that place and improving slowly, and is out of danger, but is very weak, and it may be two weeks or more before he is able to return home. Count Buchler, also representing Boorum & Pease, returned home from quite an extended trip a few days ago, and reports that the severe weather was a great drawback to business in the West and Northwest.

McLoughlin Brothers have just published two new series of toy books. They are called "Little Red Hen," and "Yellow Dwarf." The former is entirely original, very carefully written, and printed in colors. It is particularly adapted to children, as each number contains a lesson in morals that cannot fail to improve the minds of young readers. The numbers of the "Yellow Dwarf" series are handsomely illustrated, and consist of new and improved editions of the time honored stories, "The Yellow Dwarf," "The Fawn in the Wood," "Beauty and the Beast," "Goody Two Shoes."

The growing interest taken in outdoor sports, especially in the West, is well illustrated by the large business built up within the last few years by the well known and enterprising house of A. G. Spalding & Brothers, of Chicago, which has been forced, for want of room, to seek new and larger quarters at No. 108 Madison street. This firm is devoted exclusively to the manufacture and sale of general sporting implements, and its goods have achieved a high reputation all over the country. It owns and operates a large factory at Hastings, Mich., where timber is abundant and of the best quality, and where it employs upward of one hundred hands. A practical knowledge of the various sports and their requirements, together with a large retail trade which brings this firm into direct contact with those who are skilled in the various games, enables it to anticipate the wants of sportsmen and to make up goods accordingly. The firm is making preparations for a large trade for this coming season.

F. L. Ellis, who twice visited Australia for the purpose of introducing certain lines of American goods in that country, is now in this city, and reports his second visit as being one of great success. He speaks of the goods offered by McLoughlin Brothers as an example, and says that during his first visit when offering these goods he was spoken to by several of the largest houses in the colonies in substance as follows: "Do you think we can afford to waste time in looking at American toy books when we have our resident buyer in England?" Some firms, however, purchased of him. During his second visit he called again on the firms who refused to see the goods, who not only bought of him, but remarked that they made a mistake in letting competitors have these books first; and one requested an immediate shipment, as it expected the demand for them would be immense.

McCarty & Hasberg have already taken a large amount of import orders. This was anticipated as the line of samples in the hands of their traveling representatives is one of the finest ever before shown to the trade. The house requests those who have not yet placed their orders to wait until they have an opportunity of seeing the samples.

In consequence of the purchase of their building by the Produce Exchange, Cooke & Cobb will remove on May 1 to more commodious quarters at No. 10 Broadway, this city, and will devote all their energies to their large and increasing wholesale business. They have a number of novelties, which will be introduced during the coming spring and fall.

Augustus Crusius, Victor E. Mauger & Petrie's bookkeeper and general manager, who has been ill since February 4, is now convalescent, and it is expected will be able to resume business in another week.

Evans & Gardner report business good in all the lines the firm handles. The Batchelder pencil sharpener, which is considered the best article of this class, is particularly in good demand.

Geo. W. Millar & Co., wholesale paper dealers, New York city, have formed a limited partnership under same style, with special capital of $10,000, to January 1, 1882.

Henry & Brother, booksellers, printers, &c., Napanee, Ont., Can., have dissolved partnership. T. S. Henry continues.

W. R. Hilborn, stationer, Hawkesville, Ont., Can., has removed to Tara, Ont., Can.

G. A. Odell, stationer and fancy goods dealer, Ingersoll, Ont., Can., has sold out.

Samuel Hanmer, printer, Hartford, Conn., is dead.

W. H. Michael, publisher, Sidney, Neb., has sold out.

Geo. Cathcart, printer, Goderich, Ont., Can., has been burned out.

Honhouser & Co., stationers, &c., Rositi, Col., have been burned out. Loss, $1,000.

Guernsey & Allen, booksellers and stationers, Stockton, Cal., have dissolved partnership.

L. Lewen & Co., booksellers and stationers, Los Angeles, Cal., have dissolved partnership.

J. V. Carrothers, of S. E. & J. V Carrothers, publishers of the *Times*, McKeesport, Pa., is dead.

W. M. Wooster, publisher of the Dowagiac (Mich.) *Times*, has sold out to A. M. Moon, of Marcellus, Mich.

F. F. Carnduff, publisher of the *Biggs Recorder*, Biggs Station, Cal., has admitted T. J. McFarland to partnership.

C. W. & D. A. Youmans, booksellers and stationers, Galt, Ont., have dissolved partnership. C. W. Youmans continues.

Hall, Nicoll & Granberry, importers of fancy goods, &c., New York city, have formed a limited partnership under the same style, with special capital of $40,000, to February 28, 1883.

Henry Levy, of Henry Levy & Son, left for Europe on last Thursday, for the purpose of assisting his son, Frederick H. Levy, who has been all winter striving to secure the choicest novelties the old world can produce.

Cathcart's printing office, at Crabb's Locks, near Goderich, Canada, was destroyed by fire on Thursday night. The loss on the printing office is covered by $4,000 insurance. The loss on the building is covered by $2,000 insurance.

Among the members of the trade who visited the city during the week were: Mr. Bragg, of Van Antwerp, Bragg & Co., Cincinnati; George and John Flersheim, Western News Company, Chicago, and Mary Boling, of Mary Boling & Co., Louisville, Ky.

E. & H. T. Anthony & Co. have this week placed on the market a new large bust picture of Salvini in private dress, and a panel of John McCullough as he appears in character in Julius Cæsar. The house will in a few days exhibit pictures in character of John T. Raymond and the members of his company who are now playing "Fresh."

J. W. Randolph & English, Richmond, Va., have won the honors of the Melbourne International Exhibition for their exhibit of paper boxes. They had over 500 varieties of drug gists' boxes, &c., displayed, and included in their exhibit was a pyramid six feet high, four feet square at the base, composed of 366 boxes, each box different, corresponding to the days of the year (for leap year). That a factory only three and a half years old should carry off the prize in competition with the older factories of Europe, is something the firm has reason to be proud of.

Charles J. Cohen, 505 Chestnut street, Philadelphia, has just received a shipment from London of B. S. Cohen's celebrated Cumberland lead pencils in the well known brands of "Account Book" and "F." These pencils are made in plain cedar finish, but it is asserted that the lead, in smoothness and color, is superior to any manufacture. It is specially claimed for them that their marks are easily erasible, making them particularly desirable for bookkeepers and clerks. Mr. Cohen has also recently put on the market a

well mounted and perfect agate style for "manifold" use, put up in boxes of half dozens.

James McNulty & Co., publishers, Sidney, Neb., have sold out.

It is reported that J. A. Drake, fancy goods dealer, Albion, N. Y., has sold out.

John S. Ely, publisher of the *Beacon*, Langhorne, Pa., has sold out to J. P. Rue.

William Fraser, dealer in notions, St. Ansger, Iowa, has sold out to E. W. Holmes.

L. F. Lawrence, Adams & Co., manufacturing stationers, Boston, Mass., have failed.

Geo. Hurlbert, manufacturer of wood pulp, Fairhaven, Vt., has been burned out.

Stewart Elder, dealer in paper hangings, Buffalo, N. Y., has made an assignment.

H. C. Clark, bookseller and stationer, Eureka Springs, Ark., has made an assignment.

J. N. Elliott, newsdealer, stationer, &c., Foxbury, Pa., has sold out to W. D. Templeton.

The stock of C. B. Hess, dealer in notions, Middleburg, Va., has been damaged by fire.

The stock of David Frank, dealer in fancy goods, Providence, R. I., has been attached.

J. E. Colton & Co., news dealers and stationers, Albany, N. Y., have dissolved partnership.

C. L. Murry, proprietor of the *Herald* printing office, South Bend, Ind., has sold out to Henry A. Peed.

H. I. Nelson & Co., fancy goods dealers, Portland, Me., have dissolved partnership. H. I. Nelson continues.

Cardwell & Morris, publishers of the *Statesman*, Austin, Texas, have dissolved partnership. John Cardwell succeeds.

W. J. McLaughlin & Co., booksellers and stationers, Rositi, Col., have been burned out. Loss, $4,000; insured for $1,500.

Hanford & Waterman, booksellers and stationers, Watertown, N. Y., have dissolved partnership; G. R. Hanford & Co. continue.

Ph. Hake is engaged in getting up a full line of engravers' covers of different sizes, designed, engraved and copyrighted by him. He has engaged the services of the best artists in this city, and says he will spare no pains or money to produce the finest work in this line of engraved goods. He will start out with about twenty designs to be followed by a larger number. The goods will not be ready before fall.

"Linda; or, The Young Pilot of the Belle Creole," by Mrs. Caroline Lee Hentz, is a love story, seasoned with a multitude of adventures. The scene is laid in the South, and the tone of the novel is eminently healthful; all can read it without fear of encountering a single objectionable feature. "Linda" is published by T. B. Peterson & Brothers, Philadelphia, in a large square duodecimo volume, paper cover, price 75 cents, in uniform style with "Dosia," "Nana," "L'Assommoir," &c.

"Therese Raquin," by Emile Zola, is a powerful story of the realistic school. It is the story of a murder skillfully planned and skillfully executed. The description of the remorse that swiftly followed on the dastardly crime—remorse that transformed the guilty love of the murderers into hate and loathing—is given with power. "Therese Raquin" is printed on tinted paper, and is complete in one volume, paper cover, price 75 cents, in uniform style with "Nana," "L'Assommoir," "Clorinda," "Albine," "Magdalen Ferat," "Miette," "Helene," "The Markets of Paris," and "The Conquest of Plassans," by Emile Zola.

Fred Horn, of Koch, Sons & Co., returned home on Friday from a trip of about six weeks to the West. He says he encountered snow and ice most of the time while he was away.

N. S. Otis, of the Acme Stationery and Paper Company, is on his way here from the West and is now in Chicago, and will leave there about the last of this week. In a letter to his employers he reports trade good everywhere. W. H. Sears, of the same concern, is in Montreal and will visit all the principal places in Canada. He reports trade on the St. Lawrence as excellent, and everybody he saw was in excellent spirits.

THE STATIONER.

DEVOTED TO THE INTERESTS OF THE

Stationery and Fancy Goods Trades.

WEEKLY---$2.00 PER ANNUM.

Single Copies - - - - 10 Cents

NEW YORK, THURSDAY, MARCH 24, 1881.

Advertisements cannot be received for insertion in the current week later than 12 M. on Wednesday. The charge for advertising is 25 cents a line, each insertion. Special terms for standing and displayed advertisements to be had on application.

This journal aims to be a medium of information for and a representative of the interests of every one connected with the stationery and fancy goods trades. It contains a full and trustworthy survey of the market for stationery in this country, in all cases giving the actual prices at which goods can be bought of importers and jobbers in this city, together with a detailed account of novelties in the trade, patents relating to stationery, and current items of interest. A review of foreign markets and accounts of movements abroad will also be furnished, and no pains will be spared to make THE STATIONER a thorough and complete exponent of the trade.

Subscription and postage for Great Britain, per annum..... 12s.

Any information our readers may wish to obtain shall be cheerfully given, and prompt replies will be made to all inquiries addressed to us on any subjects of interest to the trade.

Communications on all trade matters are earnestly solicited. Address

HOWARD LOCKWOOD, Pres. and Treas.
American Stationer Association,
74 DUANE STREET, NEW YORK.

Subscribers to THE STATIONER can be supplied with the best cloth binder in the market. Deliverable at the publication office. Price, fifty cents.

Readers of this paper who avail themselves of the information obtained from its columns, by advertisement or otherwise, are requested to notify their correspondents of the source of their information.

HAS the price of envelopes advanced? We are told that some of the manufacturing firms are quoting about 10 per cent. higher; while, on the other hand, it is alleged that the New York houses have not made any advance. It does not seem, therefore, that there is any concert of action in the envelope trade, even if some of them are quoting higher. There is a slight upward movement in paper, and it may be that the cost of envelope manufacture has been too low to make the business profitable. Judging, however, from the fact that the trade have refused to be bound by any agreement, it is only fair to assume that they understand their business and know what they can afford. And yet there may be an understanding which has not been made public. If an advance is positive buyers generally would like to know it.

CONGRESS passed a trade mark law on the third instant which is now in force. The Patent Office has prepared a set of instructions for the guidance of those who want to register their trade marks. It will be remembered that the last preceding law relating to trade marks was declared unconstitutional. The new measure is limited in its application to trade marks used in commerce with foreign nations and the Indian tribes, this being considered within the constitutional prerogative of Congress. It is surprising that further action as to trade marks has been allowed to go by default. The necessity for some provision to conserve the safeguards which trade marks are expected to throw around the rights of their owners, and to protect the persons who place confidence in them is generally recognized, and yet nothing has been done to establish their security other than is done in the new law, which is of limited power. An amendment to the constitution has been suggested, but has, so far, found no one to propose it in Congress. It would seem that a great deal of time has been expended in discussions and feeble legislation which might have properly been given to this subject.

ONLY civil remedies are given by the new trade mark law. All owners of trade marks domiciled in this country are given protection, and foreigners can register their trade marks and share the privileges if the country in which they live protects American trade marks. Suits for damage and injunction may be had as remedies for infringement. By this the trade mark treaties between this and other countries are secured. But the fact is there are so many irresponsible persons who make use of other persons' trade marks to put off fictitious or simulated goods upon the market that a mere suit for damages has no repressive effect, and an injunction can be avoided by devices which are too well known to be recounted. What we want is something sharp and forcible in the way of penalties whereby the counterfeiting of trade marks can be made as odious, if not as dangerous, as to coin base money. And then, too, we want some penalty which will prevent imposition upon the public, not only from those who imitate, but from the owners of trade marks who prostitute the privilege by the abuse of the guaranty which it is expected to confer. There are representatives in Congress who, as good business men, can realize the value of stringent laws for the government and protection of trade marks. Some of these have intimate relations with the paper and stationery trades. Is it too much to ask or to expect them to give the subject their attention and to propose a constitutional amendment which will effectively dispose of all of the legal objections to a law so necessary?

ANSWERS TO CORRESPONDENTS.

F. C. N. Co. forwards note head, printed in bronze, and asks an expression of opinion as to the work.

Ans.—The typography of the note head is passably good, presswork inferior, impression too heavy (stuck through), and a sized ink suitable for bronzing purposes should have been used.

W. C. S. wants address of manufacturer of self-feeding staple press.

Ans.—W. J. Brown, Jr., 821 Cherry street, Philadelphia, manufactures the "Pet," which is the principal one sold in the market. The press is sold by Kimpton, Bainbridge, Wallach, Loutrel and the principal New York jobbing stationers.

Bergner & Co., Baltimore.

OBITUARY.

GEORGE G. BRYSON.

George G. Bryson, who has been identified with the book and stationery trade for a number of years, died of consumption at his residence in Chicago on Sunday last, aged about thirty-five years. Mr. Bryson entered the trade about twelve years ago as salesman in the retail department of the late firm of W. B. Keen, Cooke & Co., of Chicago. In 1874 he engaged as salesman with Koch, Sons & Co., of this city, remaining with them about two years. Upon the death of his father, in 1876, he returned to Chicago and again entered the employ of Keen, Cooke & Co., and remained with them until the date of their failure which occurred shortly afterwards. In 1877 he started in business on his own account at Chicago; but his health failing him, he was obliged to give it up about a year subsequently. He sold out his business in 1879 to Cobb & Bingham, of that city, and engaged with them as a clerk. Shortly afterwards he went to Colorado for the benefit of his health. Returning to Chicago, he resumed his position with Cobb & Bingham the same year. His health not improving, his friends induced him to come East, and taking their advice, he went to Philadelphia in 1880, and engaged himself with Porter & Coates, book publishers, establishing their retail department, remaining with them up to within a short time prior to his death. Mr. Bryson had a great many friends in the trade who were very much endeared to him by his many noble qualities, and who will deeply deplore his removal from their midst.

ALMANACS THREE HUNDRED YEARS AGO.

During the sixteenth and seventeenth centuries almanacs were the most popular publications in Europe. High and low, the learned and the ignorant, found something to interest them in their pages; and all classes looked with respect on planetary influences and fortunate days, and found manifold excitement in prognostications always more or less direful. The astrologers "ruled destiny's dark counsel," and royalty itself often trembled before impending misfortunes in the conjunction of planets, pestilence in eclipses, and death and the ruin of kingdoms in the advent of a comet. Almanacs began to grow common about the latter part of the fifteenth century, but were familiar to the learned much earlier. Regiomontanus published his *Kalendarium Novum* for three years, at Buda, in Hungary, in 1475, and was munificently rewarded for his labors by Matthias Corvinus. This work, though it only contained calculations of eclipses and the names and places of the planets, met with a ready sale on the Continent and in England at ten crowns of gold each copy. Rabelais published an almanac at Lyons, in 1533, and also for the years 1535, 1548 and 1550, and such productions were considered to add to the fame of the most eminent scholars. The astrologers soon began to make almanacs the medium for political predictions. The almost universal study of alchemy and the occult sciences contributed greatly to extend the demand for such glimpses iuto futurity, and the prognostications began to be regarded as the most important part of an almanac. Nostradamus was supposed to have foretold the death of Henry II. of France, the beheading of our Charles I., and the fire of London. The fame and popularity of the vaticinations of this astrologer so increased the number of political prophecies in France, to the unsettling of men's minds, that Henry III. forbade such to be inserted in almanacs, and the prohibition was renewed by Louis XIII. so late as 1628. In an Almanac and Prognostication for 1589 by Gabriel Frende, after "Finis" comes "God save Queen Elizabeth!" and these verses, evidently intended to disarm adverse criticism:

> "Thou hast my guess at daily weather
> Here present in thy viewe,
> My credit shall not lie thereon
> That every word is true;
> Yet some to please I thought it best
> To shewe my mynde among the rest."

In England, owing to their loyal expressions or to the abstinence from allusions to affairs of state, no royal proclamation ever appeared against almanacs, but they were under the watchful supervision of the Archbishop of Canterbury and the Bishop of London. Soon after the accession of James I. that monarch granted a monopoly of the trade in almanacs to the two Universities and the Company of Stationers. During the reign of James the astrologers became so numerous, and in their own view of such importance, that they formed themselves into a body, and for many years had an annual dinner and celebration of their own. Ashmole mentions in his diary his attendance at several of these meetings. The wits of the time soon directed their attention to the astrologers and their proceedings, and unmercifully ridiculed the failure and extravagance of most of their predictions. Dekker, the playwright and satirist, lashes the whole body in his "Raven's Almanac," published in 1609, "foretelling of Plague, Famine, and Civil Warre, that shall happen this present yeare 1609; with certaine Rules, Remedies, and Receipts." The stationers, probably taking the hint from the productions of Dekker or Lisle, issued almanacs disparaging all prophecies to suit the sceptics, and simultaneously others containing predictions to suit the credulous. During the troubled reign of Charles I. prognostications of all kinds were enormously increased in number and repute; and mild examples of the predictions of Lilly and Booker exist in our own times on the respectable authority of Zadkiel and Francis Moore, physician. —*Antiquary.*

EARLY INDIAN ART.

The only notice of gold plate in the Rig Veda is a mention of gold cups, but the references to jewelry are so frequent that the precious metal and stones must have been familiar to the Aryan immigrants from their earliest settlement. Yet no specimen of the art of gold-working has been met with which can, with any certainty, be attributed to the ancient period of Indian history. The oldest example now extant was found by Mr. Masson, about forty years ago, in a Buddhist tope in the neighborhood of Jalalabad. In the centre of the tope was a small apartment constructed of squares of slate. A steatite vase was found in it, containing, besides mold and the ashes of burned pearls, a gold casket filled with similar remains. By its side were four copper coins, by which the monument is assigned to one of the dynasty of Greco-barbaric kings who ruled the northwest of India about half a century before the Christian era. The ornaments of this casket are extremely curious. The Greek feeling apparent in them is most interesting. A plate of silver of similar design was long in possession of a family, the Mirs of Badakshan, who claimed to be desendants of Alexander the Great. Dr. Birdwood sees in these relics distinct evidence of the influence of Alexander's invasion on the arts of India. The Greeks, he asserts, had conquered all this part of India, had established a monarchy, and issued a coinage. Their money is well known, and is thoroughly Greek in character. Moreover, in the travels of Apollonius of Tyana he is said to have come upon remnants of Greek civilization and language in the former Kingdom of Porus. The Buddhistic sculptures in the Punjab are due, says Dr. Birdwood, to Greek rather than Byzantine influence. It is true that their exact date is unknown. They may have been carved at any tine in the thousand years between the middle of the third century B. C., and the middle of the eight of our reckoning; and those which are later than A. D. 300 may have been influenced by Constantinople. But the date of this gold casket proves that its Greek look is due to direct Greek inspiration, and many specimens of carving in stone are now recognized as betrayiug a similar origin.—*The Saturday Review.*

Market Review.

OFFICE OF THE AMERICAN STATIONER,
WEDNESDAY, March 23, 1881.

THE MONEY MARKET.—The monetary situation was characterized by ease throughout the entire week, and good borrowers found no difficulty in supplying their requirements at low rates of interest. Call loans on pledge of acceptable stock collateral ranged between 3 and 6 per cent., but the great majority of the transactions were effected at the intermediate rates. There were not many transactions in time loans, but for 30 to 60 days 5@6 per cent. was the current qnotation. In the discount market, prime mercantile paper ruled at 5@6 per cent. The government bond market was quite active throughout the week. The dealings were generally strong in tone, and, except in the case of 4½s, which are unchanged, an advance was recorded on the week's transactions; 6s and 4s rose ⅛ per cent., and 5s, ¼ for coupon and ⅜ for registered. Railroad mortgages were in rather light demand, and the market was decidedly unsettled, and at times feverish in tone. Speculation in stocks continues very tame, and the course of prices shows that the "bear" interest predominates. There is, just now, a conspicuous absence of outside operators, the market being left almost wholly to the tender mercies of the brokers The foreign exchange market is dull and rates are generally lower. At the decline the market was steady. The closing actual rates were $4.79¾@4.80 and $4 82@4.82½. Cables are $4.82½@4.83, and prime commercial bills are $4.78 @4.78¼.

THE PAPER MARKET.—The movement of paper by the jobbing trade, with few exceptions, remains quiet. Manufacturers generally seem to be kept actively engaged on orders, while dealers, notwithstanding the moderate trade doing, are not accumulating any stock, the demand and supply being about equal. There is some complaint from manufacturers of back water, which, in many cases, has the same effect in preventing a full production as the drought. There is some fear that the swelling streams will result not only in causing many mills to shut down, but in considerable damage to property. Prices, as a general thing, have shown no variation since last week, and are fairly steady throughout at our quotations, with the single exception of book papers, which we quote a shade lower. Super sized and calendered, 9½@10c., and machine finished at 9@9½c. News at 6¾@7¼c. for Straw, and 6½@7c. for ordinary wood and rag. Other grades do not call for any special mention.

THE STATIONERY MARKET.—As referred to in previous issues, the spring trade with the South and West thus far has left little to be desired, and there is no good reason to doubt that the latter part of the season will make amends for the shortcomings of the fore part, so far as the West and Northwest are concerned. The impediment to transportation in the two latter sections has been greatly increased owing to very heavy storms since our issue of last week, and not only the stationery trade but general business will suffer a great drawback in consequence. There are a few out of town members of the trade in the city tbis week, but so far as we are able to learn, they are buying very little outside of Easter cards, and moderate quantities of seasonable fancy articles. More genial weather cannot fail to give a decided impulse to the distribution of goods between all sections of the country. Prices remain steady, and so far as we are advised no changes have been made.

"THE GREAT ROCK ISLAND ROUTE"

Calls your attention to the following REASONS WHY, if about to make a Journey to the GREAT WEST, you should travel over it:

As nearly absolute safety as is possible to be attained. Sure connections in UNION DEPOTS, at all important points. No change of cars between CHICAGO, KANSAS CITY, LEAVENWORTH, ATCHISON or COUNCIL BLUFFS. Quick journeys because carried on Fast Express Trains. Day cars that are not only artistically decorated, but furnished with seats that admit of ease and comfort. Sleeping cars that permit quiet rest in home-like beds. Dining cars that are used only for eating purposes, and in which the best of meals are served for the reasonable sum of seventy-five cents each. A journey that furnishes the finest views of the fertile farms and pretty cities of Illinois, Iowa and Missouri, and is afterwards remembered as one of the pleasant incidents of life. You arrive at destination rested, not weary; clean, not dirty; calm, not angry. In brief, you get the maximum of comfort at a minimum of cost.

ONE-HALF INTERIOR VIEW OF CAR.

That the unremitting care of the Chicago, Rock Island & Pacific Railway for the comfort of its patrons is appreciated, is attested by its constantly increasing business, and the fact that it is the favorite route with delegates and visitors to the great assemblages, political, religious, educational and benevolent, that assemble from time to time in the great cities of the United States, as well as tourists who seek the pleasantest lines of travel while *en route* to behold the wonderful scenes of Colorado, the Yellowstone and Yosemite. To accommodate those who desire to visit Colorado for health, pleasure or business, in the most auspicious time of the year, the Summer season and months of September and October, the Company every year puts on sale, May 1st, at all coupon ticket offices in the United States and Canadas, round trip tickets to

DENVER, COLORADO SPRINGS AND PUEBLO,

M & H BLOTTER TABLET PATENTED

PADS OF PAPER WITH BLOTTER ATTACHED.

ELEGANCE. ECONOMY. CONVENIENCE. CLEANLINESS.

THE paper is tableted, so that each sheet may be freely removed, leaving a perfectly clean, smooth edge. No paper is wasted. The sheet on which you write is always clean, being protected by the blotter. The blotter, of the full size of the paper, is so attached at the top of the pad that both sides of it may be used, and will last out the entire contents of the pad, being always at hand, and perfectly clean.

The blotter is kept clean, and also from wearing, by the card board cover, which is made of a highly polished stock, perfectly smooth, and that will not catch dust or dirt from the desk. The cover is richly ornamented on every pad, giving the whole a neat and elegant appearance. All kinds of paper and printed blanks are put up in this form at prices as low as if loose; making the most complete line of staple and elegant stationery ever offered to the trade.

HASBROUCK & WATSON,

SOLE MANUFACTURERS. 51 NASSAU ST. NEW YORK.

FANS.

A charming boudoir hung in dim, dark tapestry, with a beautiful woman dressed, as a woman should be, in perfect harmony, and wielding a fan, forms a picture that a great artist has lately painted. Some think the subject trivial, and others, who look at it long, decide that from the "hem of her garment" to the poise of her fan the fair one is a species of intellectual coquette. And it is the poise of the fan that tells this! It is an exquisite carving of ivory, and one almost scents the perfume that emanates from it, and yet it is only an ideal fan! How much more will a real fan do? During the summer months beauty sought cooling airs in fans that were light to hold and easy to use, thinking little, except when they were used for full-dress occasions, of their artistic beauty and worth; but as the season progresses, my lady fair will dally a long time selecting the toy which she knows will improve her toilets and brighten her fascinations.

And the fans? Well, they are of silk, satin, feathers, tortoiseshell, ivory and lace. Point lace is generally seen laid on white satin with pearl sticks, but point appliqué is shown simply mounted on ivory or pearl sticks in the same manuer as silk. These are, one naturally concludes, very frail; but then the purchaser is so enamored of their web-like beauty that she rarely thinks of that. An exquisite fan is of black satin, with carved ebony sticks. The upper portion is embroidered in white silk to perfectly simulate lace, while two plump Cupids are dancing upon it, one looking heart broken at the rent he has made in the lace.

Oriental designs continue popular, being generally shown on silk fans with ivory sticks. A fan of ivory, smooth and yellow, one of tortoiseshell in its many changing hues, and one of clear amber, are not only beautiful, but are exponents of the costly that show their costliness. An artistic painting on silk of a Nile-green shade delineates Circe in all her beauty and witchery, her mouth just open enough to be coquettish and attest that it was by her voice she attracted her adorers.

English ladies, when they incline to æstheticism, refuse to use any fans, save those made in Milan. They are generally of silk, covered with embroidery in imitation of the ancient work at Delhi; being Oriental, the coloring is as gorgeous and the designs as intricate as only Oriental work can be. One made at Milan, the work of the celebrated Fenelli, was presented to Adelina Patti. It is extremely large, and is finished with a feather edge and long tassels of scarlet silk. Italian sentiment felt that for once the unities must be sacrificed to pay a tribute of regard to the songstress. The Eastern artist would have known how to have told this in flowers and delicate symbols, but the Milanese desired to make it distinctly understood, for he painted on the back in illuminated letters, "*Adelina? Piu pu!*" Which, being translated, means, "After Adelina, nothing more"—a compliment that could not possibly be misunderstood, and reminds one vaguely of the celebrated woman who said, "After us, the deluge." And her fan is in existence, too—prized highly and carried by a beauty equal to her physically, if not intellectually. It is faded, discolored, and has been mended many times; but even then, think of possessing the fan that has awed dignitaries and forced respect and obedience from the most unwilling. Now it looks a mere piece of lace, satin and pearl sticks, joined here and there by silver pieces that keep it in position. A faint odor of patchouli clings to it; but while we

like to imagine it has hung there for many years, it is, of course, an impossibility, and we know that it is only a little touch of to-day in memory of the historic past with which the clever young beauty has endowed it. Whose was it? Austin Dobson can best tell you:

"Where are the secrets it knew?
Weavings of plot and of plan;
But where is the Pompadour, too?
This was the Pompadour's FAN!"
—*The Delineator.*

EXPLAINING THE FIFTEEN PUZZLE.

The following appeared in the London *Truth*: "Richard A. Proctor has devoted his energies to the solution of the 'Fifteen' or 'Boss' puzzle, and has published some three or four learned articles on the subject. He has calculated that there are no fewer than 20,922,789,888 positions in which the puzzle may be placed if an aspirant desires to attempt its solution. Of these he has satisfied himself that one-half are soluble and the remaining half insoluble. The solubility of the problem depends upon a strange law of relation between the line in which the vacant square occurs and the number of what Mr. Proctor terms 'displacements.' If, for instance, we read the box in the ordinary way, beginning with the upper horizontal line from left to right, and find it to begin with 5, there are then four displacements, because 5 comes before 1, 2, 3, and 4, whereas it ought to follow them. If the next figure be 3 there are then two more displacements, because 3 comes before 1 and 2, whereas it ought to follow them. Now, according to Mr. Proctor, if the number of displacements are even, and the vacant block is in one of the even horizontal lines, reading from left to right—that is to say, in the second line from the top or in the bottom line—then the problem is soluble. The same is the case if the number of displacements is uneven and the vacant block be in an uneven line. But where the displacements are uneven and the line of the vacant block even, or *vice versa*, the problem is insoluble. I do not profess to entirely follow Mr. Proctor's reasoning, any more than to be able to count the stars in the nebula of Orion. But I have followed his rule, and I have never found it fail." Mr. Labouchere publishes this with the observation that for his own part he finds it rather tougher than the puzzle.

The Callograph is the name given to an apparatus or method of Herr R. Jacobsen, of Berlin, designed for the purpose of producing or multiplying copies of letters, &c. This method has, according to description, the advantage over the hektograph and other duplicating apparatus, that it will afford a greater number of impressions, and that these impressions can be made in printer's ink, which last property permits of the sending of such copies through the post office at the cheap rates charged for printed matter. The printing plate of the callograph consists of a mixture of gelatine and glycerine, to which an addition of soap is made. Before using the plate, it is moistened with a mixture consisting of tannin and glycerine, which produces a species of tanning of the surface of the plate. The original to be copied is written with a greasy ink similar to that used in lithography, and is transferred to the plate. The inked portions of the prepared printing surface take printer's ink, like the lithographic stone, while the other parts of the moisted surface reject it.

A man usiug only the faculties demanded by his calling will develop ouly those faculties. So it is evident that something beside work is necessary for healthful development, after the peculiar period of the play is passed.

THE

HEKTOGRAPH

DRY PROCESS OF COPYING.

Patented May 18 and June 1, 1880.

The most wonderful invention of the age. The cheapest and simplest method ever discovered for duplicating writings or drawings.

We are now able to announce to the trade the issue of patents to us completely covering the Process of Dry Copying; therefore the manufacture, sale or use of any Gelatine Copying Pad, without our license and authority, is an infringement of our rights, and will be prosecuted. The trade can now order these goods with confidence.

FOLEY'S

Celebrated Gold Pens and Pencils

THE FINEST AND BEST.

CIRCULAR.—To those engaged in mercantile pursuits, any invention that will facilitate their labor is highly worthy of notice, as well as of extensive patronage. One of the most important inventions of the present age is that of a pen that possesses the necessary qualities of firmness in mark and durability in use. Pre-eminently such are those of JOHN FOLEY, Manufacturer of Fine Gold Pens and Pencils, No. 2 Astor House. Their superior value is tested by the long time he has been engaged in our city in their manufacture. We, the subscribers, who know the value of FOLEY'S PENS from constant use of them for a number of years, cheerfully recommend them to those who wish for the best and most perfect Gold Pen ever made.

MAJOLICA WARES.

Majorca, one of the Balearic Isles, is sixty miles long, twenty-three wide, and presents a mountain peak 5,120 feet high. Carthage began the conquest of these islands by that of Iviza 663 B. C., and captured others during the next two centuries. The inhabitants were proficient in the use of the sling; and the next conquerors, the Romans, and notably Cæsar, employed them under the name of "fundæ librales," from their slinging stones weighing one pound. The Romans named the islands Majorca and Minorca, from their size. In 426 A. D., the Vandals took possession. In 789 A. D., the Moors followed, and formed in 1009 a separate kingdom of the Balearic Isles. Their character was piratical.

For a time Charlemagne drove the Moors away, but they returned. The Pisans fitted out an expedition, and obtained a victory over the Majorcans in 1115. Pope Pascal II. combated them, and Don Jayne, king of Aragon, expelled the Moors in 1232; but Minorca remained in their hands till 1285. He put his third son on the throne, which remained separate till 1349, when it reverted to Spain. In 1521 the peasants massacred the nobles. Count Villars subjugated Minorca in 1707, and Majorca in 1715; and later, in the Peninsular war, the Majorcans sided with Spain against the French. In the fourteenth century there was much commerce between Spain, Majorca and Italy. Gio, di Bernardi, writing in 1422, mentions the large sale in Italy of faience from Majorca and Minorca. Iviza is also mentioned by Vargas, in 1787, as having ceased to produce its celebrated faience.

Ynca is the site of a factory, of which a piece of ware, with the arms of the town, and a red ruby lustre, exists in the Musée de Cluny, probably of the fifteenth century. Scaliger, writing about 1550, speaks in high praise of majolica, adding, "We call them *majolica*, changing a letter in the name of the Balearic island, where we are assured the most beautiful are made."

Besides the arms of the town of Ynca (which are paly gules and or, on a fess argent; a dog in the act of bounding, sable), there are arabesques and fern-feaf decorations, and the pieces are beautifully coated with a nacreous lustre. Later pieces have shields of arms introduced. Majorca contains mines of lead, iron and cinnabar. As these three ingredients, according to Piccolpasso, enter into the formation of the lustres, these mines must have facilitated the production of the lustred wares on that island.

The name Iberia, given to Spain, is of Greek origin, meaning west of Italy and Greece. Hispauia is of Carthagenian or Phœnician origin. About 1000 B. C. the Phœnicians planted colonies in Spain; after 500 B. C. the Carthagenians held part of the country by conquest. The Romans followed, 206 B. C.; then the Vandals, Alans, and Goths, 400 A. D. The Visigoths took complete possession, 500 A. D. In 712 the Moors entered Cordova, and drove the Goths to another part of the country, where they founded the kingdom of Oviedo, which became subsequently that of Leon. In 756 Abd-el-Rhama, at the head of his Saracens, established the caliphate of Cordova, and erected a mosque there, decorated with wall tiles, in Arab style; his kingdom was bounded by the Douro and Ebro, while Charlemagne held all to the north of this line. In the twelfth century internal dissensions divided the Moors into the separate kingdoms of Saragossa, Murcia, Jaen, Valencia, Seville, Cordova, Grenada, Toledo, Lisbon, Tortosa, and Almeria; and the King of Leon, profiting by these dissensions, took the kingdom

of Toledo. In 1248 the Alhambra was erected by Mohammed-ibn-Alhamer, the *azulejos*, or tiles, of which bear the inscription, "There is none strong but God." Ferdinand III. united the kingdoms of Leon and Castile, and conquered from the Moors the kingdoms of Cordova in 1230; Jaen, 1242; Seville, 1248; Murcia, 1250; while the King of Aragon, in 1229, conquered Valencia, and then Majorca; Sicily in 1295; Sardinia in 1325; Naples in 1425. Ferdinand the Catholic, by his marriage with Isabella, in 1479, joined the crowns of Aragon and Castile; the Christians thus united under him conquered the Moors in 1492, and began the work of conversion—Cardinal Ximenas, in his zeal, baptizing as many as 3,000 Mohammedans in one day in 1506. A royal decree, in 1566, proscribed the use of the Moorish language, dress, bath, ornamentation, books, and dancing—everything almost except their persons; this was left for Philip III., who, in 1610, ordered the expulsion of all Mohammedans, and 600,000 souls left for Majorca, Italy, and other parts, where the knowledge and talent of their artisans were appreciated and received remuneration.

The researches of Baron Davillier have done much to clear up the dates and localities of the manufacture of lustred faience by the Moors in Spain. Señor Rivadeneyra, who traveled recently in Persia, mentions a document assigning the town of Rioja, in Spain, to the Persians as their place of residence, showing the existence of Persians (doubtless artisans) in Spain.

From a Moorish source, the memoirs of the travels of Ibn-Batoutah, of Tangiers, written about 1350, we learn that "at Malaga is manufactured the beautiful pottery or golden porcelain which is exported to the farthest countries."

Lucio Marieno, who chronicles the reign of Ferdinand and Isabella, mentions the beautiful faience still made at Malaga, in 1517. It is believed that subsequently the manufacture at Malaga declined, while that of Valencia increased in importance.

The arabesque decoration of the Moors shows abundantly the Persian origin of its forms, which they modified in a manner characteristic of themselves, and distributed with a more geometrical and mechanical order over the surface. The earlier pieces have a paler and more golden lustre, while the later ones present a redder lustre, and are somewhat coarser in design, and Christian inscriptions and coats-of-arms appear. The inscriptions on the azulejos of the Alhambra are of three sorts: *Ayat*, that is, verses from the Koran; *Asja*, that is, pious sentences not from the Koran; *Ashar*, that is, poems in praise of those who erected the palace. The first two kinds of inscriptions are in Cufic characters, and often arranged ornamentally, so as to read equally from right to left or from left to right, or up and down. The modern Arabic handwriting, which came into use 950 A. D., did not at first supplant the Cufic, which continued in use till 1508. Where the inscribed tiles are found in pavements, they have not been placed there by the Arabs, as good Mohammedans avoid stepping even on accidental scraps of paper, lest they should contain the name of Allah. The well known Alhambra vase is attributed to Malaga, about 1320 or 1350. It is decorated in blue and gold lustre, on a whitish, somewhat flesh-colored body, with arabesques and panels on which two antelopes are figured. A vase with large, flat, scollop-shaped handles, covered throughout with a diaper pattern of trellised vine leaves, tendrils, and small flowers, in brownish-golden lustre, and blue upon a white ground, is attributed to Malaga.

U. S. TREASURY DEPARTMENT.

The Secretary of the Treasury has made public the following decision:

4767.—Manufactures of Paper—Duty on.

The department is in receipt of your letter of the 3d inst., submitting the following appeals from your assessment of duty at the rate of 35 per cent. ad valorem on certain so called printed matter embraced therein and classified as "manufactures of paper," viz.: The appraiser reports that the articles consist of relief pictures, embossed cards, pictures on paste-board frames, embossed borders, medallion pictures, combination cards, bouquets, clock-shaped cards and knallbonbons, and that with the exception of the embossed borders, combination cards and knallbonbons, they are properly subject to duty at the rate of 25 per cent. ad valorem, under the department's decision of December 8, 1880. (Synopsis 4719.) You are therefore authorized to readjust the entries accordingly, and to forward certified statements for the refund of the excess of duty. In regard to the embossed borders, the appraiser reports that they would be entitled to entry as printed matter without question, if they were not embossed, and he submits the question whether this fact takes them out of the category of printed matter. In reply I would state that, under the department's decision above mentioned, embossed printed pictures are recognized as printed matter, and that this ruling is applicable to the borders in question, and you will therefore readjust the entry accordingly.

The combination cards embraced in the appeal (545 *g*) of Charles Joerg, consisting of a number of pictures arranged in combination, so that a part of them are displayed or concealed by pulling a silk ribbon attached to them, are properly subject to duty as "manufactures of paper," and your assessment of duty thereon is hereby affirmed. The knallbonbons, it appears, consist of covers for candies manufactured of gilt or silver paper, without printing, and are undoubtedly "manufactures of paper." Your assessment of duty thereon is also affirmed. (Collector of Customs, New York, February 11.)

Dry glue steeped in cold water absorbs different quantities of water, according to the quality of the glue, while the porportion of the water so absorbed may be used as a test of the quality of the glue. From careful experiments with dry glue immersed for twenty-four hours in water, at 60° Fahr., and thereby transformed into a jelly, it was found that the finest ordinary glue, or that made from white bones, absorbs twelve times its weight of water in twenty-four hours; from dark bones, the glue absorbs nine times its weight of water, while the ordinary glue, made from animal refuse, absorbs but three to five times its weight of water.

Some of the Chinese similes are said to be as pointed as they are sarcastic. They call a blustering, harmless fellow "a paper tiger." A man who places too high a valuation on himself they compare to a "rat falling into a scale and weighing itself." "A hunchback making a bow" is what they call overdoing a thing. A spendthrift they compare to "a rocket," which goes off at once, and a man who expends his charity on remote objects, neglecting his own family, is said to "hang a lantern on a pole, which is seen afar, but gives no light below."

FOR SALE—A RARE CHANCE—A BOOK, STATIONERY and Fancy Goods Business, in an important wood and iron manufacturing town in central Pennsylvania; population about 4,000 and fast increasing (the only store of the kind in town); cash sales over $7,000 per year; price, $3,000, cash down; no other need apply; business is improving. Address A. B. R., office American Stationer.

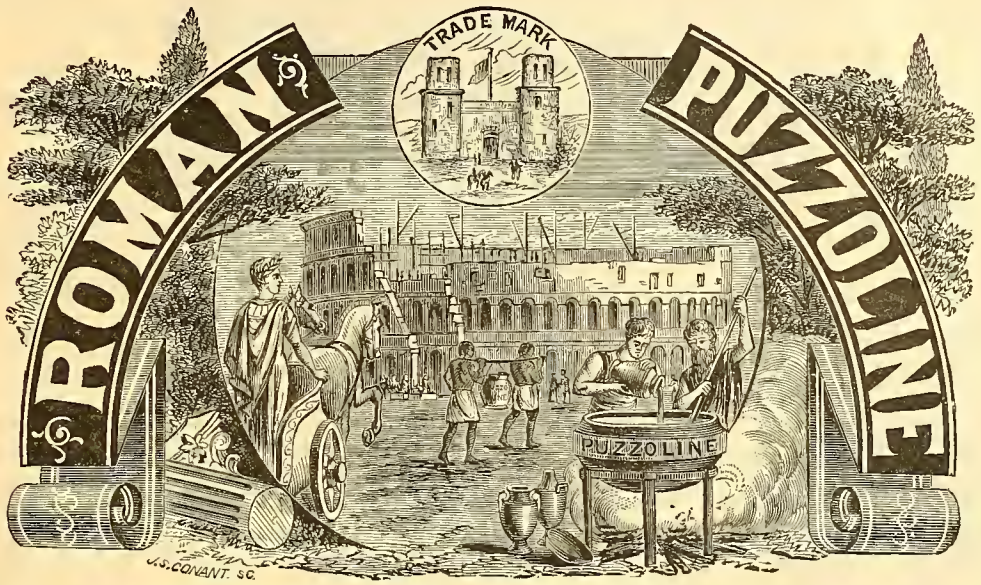
The Cement of the Ancients.

UNEXCELLED FOR STRENGTH AND DURABILITY!

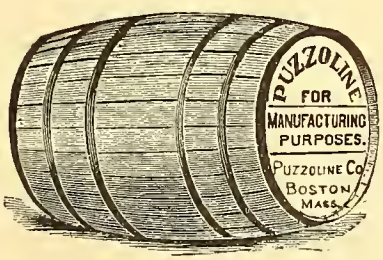
☞ CAUTION.—Manufacturers or others using adhesives of any kind are invited to examine into the merits of the above before purchasing, as none are genuine without the Trade-Mark, a castle, blown into the bottle.



☞ CAUTION.—Manufacturers or others using adhesives of any kind are invited to examine into the merits of the above before purchasing, as none are genuine without the Trade-Mark, a castle, blown into the bottle.

This new adhesive is a **liquid glue and cement combined,** and possesses greater strength and tenacity than any other known cement. It is composed of no injurious ingredients, **is entirely odorless,** and is **always ready** for use; no heat being required as with other adhesive compounds.

As a **Cement** in repairing **Crockery, Glassware** and **broken Ornaments** of all kinds, it is **unequaled.** It will stand the test of boiling water as no other adhesive will. As a **Glue** it is not affected by heat or moisture, and will hold more firmly than any other known preparation.



CIMITOLINE.

A MUCILAGE.

Its action is quicker, it is not affected by moisture, will not sour, mold, or dry up in any climate, and does not wrinkle the paper, as is the case with mucilage now in general use.

MANUFACTURED SOLELY BY

THE PUZZOLINE COMPANY,

CARTER, DINSMORE & CO., Boston and New York.

BYRON WESTON

DALTON, MASS.,

HAS BEEN AWARDED THE

GRAND PRIZE GOLD MEDAL

AND RECOMMENDED THE

Medal of Honor and Perfection

At PARIS, 1878,

This being the **HIGHEST and ONLY AWARD** given for

LINEN RECORD and LEDGER PAPER.

—A SPECIALTY.—

THIS Paper has received THE HIGHEST PREMIUM over all others from *the Cincinnati Industrial Exhibition*, *Massachusetts Charitable Mechanics' Association*, *Franklin Institute* of Philadelphia, Louisville Exposition, Medal and diploma from *United States Centennial Commission*, *Medal of Progress American Institute*, *1877*, *and Medal of Improvement and Progress*, *Boston*, *1878*. Its

PRINCIPAL ADVANTAGES

are as follows:—1. It contains more LINEN than any other Ledger Paper, has a longer fibre, and is, consequently, tougher. 2. Having a harder and better body, it frays less in erasure, so that by simply using the rubber after the eraser, the ink is prevented from spreading. 3. It is more uniform in Weight Color and Finish. 4. It never cockles if properly bound. 5. Its chemical action upon ink is such that it both writes and rules up better. For proof of the foregoing, refer to a large number of Stationers, Bookbinders, Bookkeepers, and Recorders, who have given it, after a severe test, the preference over all others. This paper is *Double Sized*, and will stand any climate or the most acid of fluid inks.

☞ Send for sample sheet, ERASE and REWRITE FOUR TIMES on same spot.

Each sheet is water-marked with name and date.

The American Stationer

A JOURNAL DEVOTED TO THE INTERESTS OF THE STATIONERY & FANCY GOODS TRADES

REDMAN & KENNY, N.Y.

"The Stationer"—Every Thursday—$2.00 Per Annum.

VOL. IX.---NO. 13. NEW YORK, MARCH 31, 1881. WHOLE NO. 301.

Correspondence.

BOSTON NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

BOSTON, Mass., March 29, 1881.

With the arrival of the robins and the blue birds, the swelling of the fruit tree buds, the springing grass, and other signs of spring, we are reminded that the stationers are expecting a fair trade. The bad weather of the past month has almost destroyed some kinds of spring trade, but the stationers say they will sell as large a volume of goods as they did a year ago when business was rushing and pushing.

The jobbing business has been decidedly good during the past week, and a perceptible reduction of certain lines has taken place, especially in blank books, papers, envelopes and small stuff. Many country dealers are without good assortments, and replenishment is now the order of the day. The telephone and the telegraph now save the out of town merchants loss of time and money, while the intelligent expressman is an indispensable factor in the modern way of doing business.

There is an increasing demand for unique goods in stationery. The reason for this lies in the fact that such articles serve the double purpose of use and ornament, and this department of trade offers a wide field for novelty in goods.

The Hollingsworth Paper Mills, at Hyde Park, partially destroyed by fire a few weeks since, are being rapidly rebuilt.

The Russell Paper Company, Lawrence, is at present running all of its mills on full time, producing fifty tons of paper daily.

The Forbes Lithographic Manufacturing Company has recently produced several new sets of advertising cards, which are very desirable. The Albertype engravings of this establishment are sold by all picture dealers throughout the country.

Winkley, Thorp & Dresser, No. 111 Devonshire street, are selling a new style of card album. Each book contains a goodly number of pages, and each leaf is hinged like the leaf of a photograph album, thus meeting the requirements needed in a durable and elegant card album.

Soap and advertising cards have formed a partnership and blossomed into Shakespeare's "Seven Ages of Man." Ask your grocer about it.

The first edition of 5,000 copies of "The Fair Barbarian," James H. Osgood & Co., publisher, was exhausted on the day of publication.

A Kingston street firm makes odd-sized envelopes a specialty.

Deland & Co., printers, Post Office square, have been putting in a number of new and large presses during the past week.

The *Boston Telegram*, a semi-monthly telegraphic journal, is a new candidate for public favor. The first number reads well. Noble Brothers publishers, 79 Milk street.

Easter cards were never more plenty than they are this year. Prang's, Ward's, De La Rue & Co.'s, and the German makes vie with each other in assortment and design—and "each of these is the best."

Mr. Prang speaks disparagiugly of Boston's treatment of "art." And this, after all Walter Smith's labors! Boston folk will see the point.

At the autograph sale in this city on Wednesday last, the highest price paid was $50 for an autograph of Charles Lamb.

The other day I ventured to ask a leading stationer why he did not advertise more freely. "Because our goods and the mode of our dealing with our customers advertises our house, and, at the same time, brings us new customers." He changed the subject at once, but not until after the senior member of the concern admitted that it did pay to "advertise during a dull period." But doesn't it pay to advertise continuously, for the same reason that a man would decline to take in his sign occasionally?

A choice Easter card device is a porcelain panel, with a bird's nest filled with eggs, painted in oils and framed in brilliant olive and crimson plush.

Houghton, Mifflin & Co. are to make a display in New York, in keeping with their reputation as a leading publishing house.

Paper plates are the last innovation. No deduction from waiter's wages on account of breakage. L.

CINCINNATI NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

CINCINNATI, O., March 28, 1881.

W. B. Payne & Co.'s envelope factory, No. 2 Home street, burned night before last, or rather yesterday morning, for the fire broke out at midnight. The loss and damage are put at $25,000, fully insured. Payne & Co.'s stock and machinery were valued at $46,000; so they have $21,000 saved, as per estimate. Wm. M. Donaldson & Co., lithographers, suffered to the extent of $27,000 by the same fire. Their loss was in presses, lithographic stones and the like, as well as in stock. The building was occupied by several other parties, but these two are the only ones related by business to the stationer. They both carried insurance, divided among several companies and ample to cover all their losses. Geo. Gibson, late of Gibson & Co., lithographers in Cincinnati and New York, had just given a collation last Saturday at the opening of his business on Home street. At midnight the firemen forced his doors and carried their hose through his press and stock rooms to play upon the flames from the windows. Here the knights of the nozzle battled the fire which was roasting the walls of his printing house and office, and while they prevented the fire from inflicting damage they doused the floors with water.

Geo. Gibson has set up for himself, going it alone without a partner. He employs two presses, one a "Hughes & Kimber, London, Victor E. Mauger, New York, agent," and another of later make, a "Victory," marked "Victor E. Mauger, Hughes & Kimber." I believe it was made at Hoe's in New York. By the way, it is astonishing how colors are taking the place of black and white in all sorts of bill and dodger advertising. In foreseeing this tendency and turning it to account, the business men of Cincinnati have not been behind those of any other city in this busy nation.

W. B. Carpenter & Co. have purchased of Van Antwerp, Bragg & Co., the proprietorship of the Oxford and Hope mills writing papers, and the stock on hand of the first named. They regard the acquisition as decidedly advantageous.

P. G. Monroe, general manager Western office of the Lockwood Press (I need not catalogue the journals published by that press), was in the city on Saturday, and I suspect remained over Sunday. I heard of him everywhere, but saw him nowhere. I captured his card, which is the best I have done up to the present writing.

"When the swallows homeward fly" the representatives of the trade will of course be here, but the weather has prevented their appearance in large numbers thus far. How much trade is affected by the "Nimbus," the "Stratus," the "Cirrus," the "Cumulus," the inky, low sailing storm cloud of summer, and the dark, wintry bride of Boreas white-veiled with snow, might be an interesting inquiry and profitable economically in the event of a successful investigation. Till the world grows older we shall have to content ourselves with merely knowing that there is a relation between the laws of meteorology and those of trade, and that at present those of meteorology seem to exercise a controlling influence.

I asked everybody this week to assist me in growling. I have been looking for matter to growl about and couldn't find anything substantial in that line. I have heard only one complaint, and that is that on big jobs where competition is invited, some competing parties in-

dulge in the diversion known as "throat cutting." The intention in such cases is generally murderous—speaking by metaphor—but the result is almost invariably suicidal—also speaking by metaphor. That such things happen in Cincinnati only goes to show that art paper hangings, art schools, art pottery, musical centres, art museums and æsthetic tastes may in some instances exist in company with some very disagreeable features of human nature.

PRINCE WILLIAM.

MICHIGAN NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

DETROIT, Mich., March 28, 1881.

The weather is warm and bright, but on a recent trip up north I found the ground in the country still covered with snow, frozen to a considerable depth, with sleighing good up to last Wednesday. Alternate drifts and bare spots make traveling in the country difficult.

A short time ago it took four engines ten hours to take a few passenger cars less than a hundred miles only a short distance out from Detroit. This makes trade dull in some places, as the expense of carting goods on the one hand, and inability of getting merchandise with any degree of certainty on the other, has its effect upon the trade, whether as a wholesale or retail dealer, and also disappoints customers in the interior. Most of the roads out West are now reported open, although navigation on the lower lakes is still closed, and no "Vennor" can open them until old Sol gets ready to make the ice move. Lake captains think the season for navigation up north will not open until early in May.

Snow plows, shovels, and old Sol admitted so much light and civilization into Traverse City lately that the first train was loaded with commercial travelers who had been caught and detained in the late storms. These persons should return to Detroit when they see bad weather ahead, as nothing is left undone here to make the stay of snowbound people pleasant.

Detroit has not been visited at any time with such severe weather as was experienced further west, so that travelers can always depend upon our good weather, and should bring their samples and money into our city, where the people are alive to their interests, and can (as is well known) be always depended upon for good orders.

Trade is now showing signs of big activity, and it seems that all hands, employers and salesmen, are working hard by daylight and electric light (if they have got one) to reach such a climax this Easter as will surpass their best expectations. The wide-awake storekeeper will change his window frequently, will advertise liberally, try to excel his neighbor, not overlook small things, be polite and accommodating, and have an eye that his help is the same. They must take care not to have too cheap help, who sometimes fail to push the goods and show what is in the store, and in some cases allow customers to visit other cities for what can be had at home in many cases at better stores at all seasons of the year. Is this correct?

A. J. Brow has a fine assortment of cards and fine arts, also artists' materials in large variety. Here you find the Easter dove suspended from the mouth of a deer's head.

John Willyoung has a miscellaneous stock of both American and foreign Easter cards, some very large and costly.

Fred. Gibbs has given much care to the arranging of his cards. This firm has sold quite a number of Dr. Young's "Analytical Concordance," which is bought very readily by the clergy, who frequent this store for all first class standard works.

Macauley Brothers advertised an Easter opening day, and their store was packed from early until late, they having issued invitations and the day being a fine one. It was also the opening day of two of the largest dry goods houses, in close proximity. The cards in one window were made in the form of a cross, and attracted considerable attention.

D. P. Work, of the fine stationery Palace store, makes a very pretty and tasty display of his Easter cards, as usual. Every card is arranged to have its desired effect, and Mr. Work just knows where to place his best goods and those that are marvels of beauty to sell.

Geo. R. Angell has Braun's famous autotypes from Paris, comprising over 30,000 subjects, and which are unrivaled in the world. Mr. Angell carries a large stock also of drawing and artists' materials, from Janentzky & Co., of Philadelphia.

Thorndike Nourse, anticipating a run on Easter cards, gave Mr. Clark, with Prang & Co, such an order for the Easter dove that nearly one hundred with the fringe were sold the first day. Those having the best sale from this firm are No. 6, church cards; No. 8, special Easter cards; No. 12, floral designs, medium price; No. 13, figure card, for children; No. 15, wild flowers, and fifty varieties of birthday cards. Most of the Detroit stores have had to order several times, and the country stores, in some places, have not been able to obtain even a single copy of the Easter card; so your correspondent was pressed into visiting several stores in order to send out a few.

J. A. Roys, advertises that he has Easter cards from every known manufacturer, and offers them at very low prices to all classes; also books of all kinds at his store at bottom figures.

The compilation of the laws continues to be one of the principal topics of discussion among several parties in Detroit, the Legislature at Lansing, others in Chicago, Columbus, Ohio, and Pontiac, Mich. Derby & Co., of Columbus, have seen Callahan & Co.'s (of Chicago) latest offer on the compilation of the laws, and have "gone them one better" in offering to do the work for $2 per volume to the extent of 12,000 volumes, and all over that number they will furnish for $1.50 per volume. They make a *bona fide* offer on a square basis, with all the details, the same as in their previous offer. This offer, if accepted, is some $12,500 cheaper than Callahan's last offer on the basis of 12,500 sets.

This last offer made, viz., $5 per set, is the lowest notch they strike; and whether they are awarded the contract or not, they intend to publish the work "allee samee," and sell it at a fair price, independent of the State compilation. They have control, it is said, of the Howell compilation, which is complete, excepting the work of the present session, and, they say, can put the work in the market many months in advance of competitors, and that they don't hesitate about doing this. Charles Draper, of Pontiac, has an idea of getting it for $2 per volume.

Thorndike Nourse has completed arrangements with Callahan & Co., of Chicago, for the exclusive handling of the forty-second Michigan report, and invites all members of the legal fraternity to leave their orders with him. He will sell the work at the State contract price—viz., $1.35 each. It will be ready for delivery within two months. Nourse and his friends are getting in their solid work. The State printer is wide awake.

Richmond, Backus & Co., with their satellites, are watching the movements at the capitol, and have at present the lowest offer before the House. Mr. Clark, of Callahan & Co., Chicago, is on the spot all the time; so is Mr. Cahill, representing Mr. Draper, of Pontiac, and Mr. Stewart, for the Detroit firm. It is fully expected that on Tuesday, the 29th inst., something definite may be done by the committee, as the House will adjourn on the 31st for election.

It is thought that the Legislature will have enough business to detain it until May.

John A. Gebhard, dealer in printers' materials, has proven that he can run such a business in this city to advantage, as his stock now embraces everything in that line, and he also carries a complete list and full stock of all grades of papers, printers' ink, &c.

Mr. Ripka, with Janentzky & Co., had some beautiful imported Easter cards here this week, which the trade ordered largely of, being new designs. This firm will shortly add another album of views to their already long list. This time it is one of Grand Rapids, Mich.

The Board of County Auditors at Detroit awarded the contract for printing and stationery to the *Post and Tribune* Publishing Company. The bids were: *Post and Tribune*, $670.60; Detroit *Free Press* Company, $680.36; Thorndike Nourse, $820; Richmond, Backus & Co., $840.

C. E. Hopkins, known everywhere, has been in town displaying the contents of four huge trunks, consisting of albums in every style of make and bindings. A new feature is the clasp. He reports trade exceedingly good in Detroit, and was moving off to Buffalo and home.

Mr. Warren, of Holman & Co., Philadelphia, had something new in Bible covers, and small stock of albums.

Robert J. Lester, with J. H. Bufford's Sons, called on the trade with his usual display of goods.

Among other arrivals are Mr. Jansen, of Jansen, McClurg & Co., Chicago; Hermann Cohen, San Francisco, traveling East from the Golden City; A. Heymann, with Eagle Pencil Company; Mr. Lawson, with R. Carter & Brothers, Boston; W. A. Gilleland, with Southwark Paper Manufacturing Company.

The Freedman Brothers, Detroit, store case comes up for trial before the United States court in this city, Monday, the 28th inst.

A new weekly society paper, *Chaff*, appeared in this city last Saturday, and before noon 10,000 copies had been sold. There will be a city and state edition. It is well printed and bright, but the paper is too poor.

CITY OF THE STRAITS.

TORONTO NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

TORONTO, Ont., March 26, 1881.

After having gone through five months of winter, it is not unreasonable to suppose that one might possibly have become somewhat tired of it. One gets weary of it and the amusements that belong to it, and is on the *qui vive* for the first indications of spring. In my last I wrote you there were signs of winter's breaking up and since then these have very much increased. Along the docks the bustle and preparation for the opening of navigation have greatly increased, and the few who were to be seen two weeks ago working at vessels have been quadrupled. Carpenters, painters, calkers and riggers are as busy as they can be, and shipowners are looking forward to a good time in their way this season. But these are not the only signs

that spring is rapidly approaching. The robin and other spring birds are here, making us glad with their cheerful songs; and if these were to fail, the man with the hand-organ is abroad, and he is as sure an index as the barometer. When he comes and patiently grinds out his melody under your window, you are safe in assuming that spring is right here, and may begin to look over your summer clothes and get out the flower pots.

I took a run west last week and found things in the places visited very satisfactory, indeed. Of course, at the present time, with the breaking up of winter and bad roads, there is not a rush of business in any place, but the winter's trade has been good, and every one is satisfied with the past and sanguine about the future. All that I saw in Hamilton are pleased with the results of the winter's work, and are expecting a large spring trade. R. Duncan & Co. have made large importations, and carry a varied and well selected stock of books, stationery, wall paper, &c. They have a bindery in connection with their business, and manufacture blank books. They have an excellent stand and do a large trade. J. Eastwood & Co., I believe the oldest stationery and book establishment in the town, are also making heavy importations in anticipation of a large trade during the coming season. They report trade as being excellent during the past four months. Beside books and stationery, they are also large dealers in paper hangings and decorations, and they say the trade in this line promises to be the best in many years.

I found things quite as satisfactory in London. W. Bryce, now in England, has moved into new premises, and has a fine spacious warehouse. W. L. Currie and J. I. Anderson both report a good Lenten business. Reed Brothers are so crowded with orders, one of the partners told me, that he had found it necessary to come down in the morning before 8 and remain until after 10 P. M. for the last six weeks. Both these cities are increasing rapidly.

The principal dealers in Berlin, a town northeast of London on the Grand Trunk Railroad, are C. Strubing & Co. They are wholesale stationers and large importers of German fancy goods and paper hangings. Their business extends over the whole province. There are four button factories in this place which do a very large trade, besides other factories. The county of Waterloo, of which Berlin is the county town, has a large German population, and is a wealthy agricultural county. At Doon, in this county, M. B. Perine & Co. have extensive flax mills and twine and rope factory. They employ 130 hands, and turn out $150,000 worth of goods per annum.

Guelph, the capital city of the county of Wellington, is a flourishing place, situated in the centre of a magnificent agricultural district. The oldest and largest book establishment here is that of T. J. Day, who has an extensive and flourishing trade. Nellis & Co. have also fine premises, and are doing well. In this short round I did not find one complaining of trade, even at this season of the year, and all are expecting a busy spring.

Your Mr. Walden called on me on his way through to Montreal. There has been a good representation of American travelers here lately, and there are many more, no doubt, on their way.

Our city houses have had their travelers out for some time, and orders are coming in freely. Willing & Williamson's new store is nearly completed, and when finished will be the finest book store in the Dominion—and, indeed, I might go further and say that there are very few in America that will surpass it.

Fifty oil paintings, all Canadian subjects, were sold at the Mart to-day, realizing good prices. They were the work of Mons. Lormans, and were of high merit.

The divine Sarah paid us a visit last week; and notwithstanding a very severe storm, she had a good house, and I might have added, too, notwithstanding the warnings of prominent clerical gentlemen. There was no excitement over the event, however. When tickets run up to three dollars a seat, our people, as a rule, are not such enthusiastic playgoers as to turn out in very large crowds.

The stock market both here and in Montreal is firm. Parliament has prorogued, and since the settlement of the syndicate question political matters have become very dull. C. H.

THE NEW TRADE MARK LAW.

Following are the rules and regulations adopted by the United States Patent Office for the registration of trade marks under the act of March 3, 1881:

1 (*a*). Any person, firm or corporation domiciled in the United States or located in any foreign country which, by treaty, convention or law affords similar privileges to citizens of the United States, and who is entitled to the exclusive use of any trade mark and uses the same in commerce with foreign nations or with Indian tribes. The following countries have treaties with the United States at this time, viz.: Russia, Belgium, France, Austria, the German Empire and Great Britain.

(*b.*) Any citizen or resident of this country wishing the protection of his trade mark in any foreign country, the laws of which require registration in the United States as a condition precedent.

2. Every applicant for registration of a trade mark must cause to be recorded in the Patent Office:

(*a.*) The name, domicile and place of business or location of the firm or corporation desiring the protection of the trade mark, and the residence and citizenship of individual applicants.

(*b.*) The class of merchandise and the particular description of goods comprised in such class to which the trade mark has been appropriated.

(*c.*) A description of the trade mark itself, with facsimiles thereof, and the mode in which it has been applied and used.

(*d.*) The length of time during which the trade mark has been used by the applicant on the class of goods described.

3. A fee of $25 is required on filing each application, except in the cases hereinafter named. (See paragraphs 16 and 17.)

4. An application for the registration of a trade mark will consist of a statement and specification, a declaration or oath, and the fac-simile, with duplicates thereof.

5. These should be preceded by a brief letter of advice requesting registration and signed by the applicant.

6. The statement should announce the full name, citizenship, domicile, residence and place of business of the applicant (or if the applicant be a corporation, under the laws of what State or nation incorporated), with a full and clear specification of the trade mark, particularly discriminating between its essential and non-essential features. It should also state from what time the trade mark has been used by the applicant, the class of merchandise and the particular goods comprised in such class to which the trade mark is appropriated, and the manner in which the trade mark has been applied to the goods.

7. The declaration should be in the form of an oath by the person or by a member of the firm or by an officer of the corporation making the application, to the effect that the party has at the time of filing his application a right to the use of the trade mark described in the statement; that no other person, firm, or corporation has a right to such use, either in the identical form or in such near resemblance thereto as might be calculated to deceive; that such trade mark is used in lawful commerce with some foreign nation (or nations) or some Indian tribe (or tribes), and that it is truly represented in the fac-simile presented for registry.

8. This oath may be taken within the United States, before a notary public, justice of the peace, or the judge or clerk of any court of record. In any foreign country it may be taken before the secretary of a legation or consular officer of the United States, or before any person duly qualified by the laws of the country to administer oaths, whose official character shall be certified by a representative of the United States having an official seal.

9. Where the trade mark can be represented by a fac-simile which conforms to the rules for drawings of mechanical patents, such a drawing may be furnished by applicant, and the additional copies will be produced by the photolithographic process at the expense of the office. Or the applicant may furnish one fac-simile of the trade mark, mounted on a card ten by fifteen inches in size, and ten additional copies upon flexible paper, not mounted; but in all cases the sheet containing the mounted fac-simile or the drawing must be signed by the applicant or his authorized attorney.

10. All applications for registration are considered in the first instance by the trade mark examiner. An adverse decision by such examiner upon the applicant's right to registration will be reviewed by the Commissioner in person upon petition without fee.

11. No trade mark will be registered unless it shall be made to appear that the same is used as such by the applicant in commerce with foreign nations or with Indian tribes, or is within the provisions of a treaty, convention or declaration with a foreign power, nor which is merely the name of the applicant, nor which is identical with a known or registered trade mark owned by another and appropriated to the same class of merchandise, or which so nearly resembles some other person's lawful trade mark as to be likely to cause confusion in the mind of the public or to deceive purchasers.

12. In case of conflicting applications for registration, or in any dispute as to the right to use which may arise between an applicant and a prior registrant, the office will declare an interfereuce, in order that the parties may have opportunity to prove priority of adoption or right; and the proceedings on such interference will follow, as nearly as practicable, the practice in interfereuces upon applications for patents; but each applicant and registrant will be held to the date of adoption alleged in the statement filed with his application. On the petition of any party dissatisfied with the decision of the Examiner of Interferences the case will be reviewed by the Commissioner without fee.

13. When these requirements have been complied with, and the office has adjudged the trade mark lawfully registrable, a certificate will be issued by the Commissioner, under seal of the Interior Department, to the effect that applicant has complied with the law, and that he is entitled to the protection of his trade mark in such cases made and provided. Attached to the certificate will be a fac-simile of the trade mark and a printed copy of the statement and declaration.

14. The protection for such trade mark will remain in force for thirty years and may, upon the payment of a second fee, be renewed for thirty years longer, except in cases where such trade mark is claimed for and applied to articles not manufactured in this country, and in which it receives protection under the laws of any foreign country for a shorter period, in which case it will cease to have force in this country, by virtue of the registration, at the same time that the trade mark ceases to be exclusive property elsewhere.

15. The right to the use of any trade mark is assignable by an instrument of writing, and such assignment of a registered trade mark must be recorded in the Patent Office within sixty days after its execution, in default of which it shall be void as against any subsequent purchaser or mortgagee for a valuable consideration, without notice. No particular form of assignment or conveyance is prescribed, but the trade mark should be identified by the certificate number.

16. Owners of trade marks for which protection has been sought by registering them in the Patent

Office, under the act of July 8, 1870 (declared unconstitutional by the Supreme Court of the United States), may register the same for the same goods, without fee, on compliance with the foregoing requirements. With each application of this character a specific reference to the date and number of the former certificate is required.

17. Applicants whose cases were filed under the act of 1870, either prior to or since the decision of the Supreme Court declaring it unconstitutional, which are now pending before the office, are advised to prepare applications in conformity with the law and foregoing rules. On the receipt of such application, referring to the date of the one formerly filed, all fees paid thereon will be duly applied. Those who have paid only $10 as a first fee are advised that the law does not provide for a division of the legal fee of $25, and that the remainder of the entire fee is required before the application can be entertained.

18. Printed copies of the statement and declaration in each case, with a duplicate of the trade mark, can be furnished by the office. The *Official Gazette* of the Patent Office, published weekly, will contain a list of all trade marks registered, with the name and address of the registrant, a brief statement of the essential features of the trade mark and the particular description of goods to which it is applied.

FEES.

19. On filing an application for registration of trade mark..... $25 00

For recording assignments—

Under 300 words.....	1 00
Over 300, and less than 1,000 words.....	2 00
Over 1,000 words.....	3 00
For single printed copy of statement and declaration.....	0 25
Single copy *Official Gazette*.....	0 10
Annual subscription *Official Gazette*.....	5 00

20. All letters should be addressed to "The Commissioner of Patents," and all remittances by postal order, check or draft should be to his order.

21. Letters relating to pending applications should refer to the name of the applicant and date of filing. Letters relating to registered trade marks must refer to the name of registrant, number or date of certificate, and the class of merchandise to which the trade mark is applied.

22. The office cannot undertake to respond to inquiries propounded with a view to ascertain whether certain trade marks have been registered, or if so to whom or for what goods; nor can it give advice as to the nature and extent of the protection afforded by the law or act as its expounder, except as questions may arise upon applications regularly filed. A copy of these rules, with this paragraph marked, will be regarded as a courteous answer to all such inquiries.

THE HALIOTIS, OR EAR SHELL.

The most beautiful shells are the ear shells, or haliotis, and they are remarkable for their beauty and their diversified colors. From the splendidly iridescent nacre they possess, they are much used for inlaying papiermaché and other ornamental works in which mother-of-pearl is employed. Large quantities are sent to Birmingham for that purpose. In Japan one species is in great request as an article of food. It is called the awabi; and Koempfer informs us that they lie deep under water, sticking fast to rocks or to the bottom of the sea, from whence they are taken up by fishermeu's wives, who are the best divers in the country. The women go down armed with darts or long knives, and when they see an awabi they pull it off suddenly before the animal is aware of it, because otherwise it would fasten itself to the rocks or the bottom of the sea so strongly that no force would be able to tear it off.

Bad luck is a man with his hauds in his pockets and his pipe in his mouth, looking on to see how it will come out. Good luck is a man of pluck, with his sleeves rolled up, and working to make it come out right.

OLD BERKSHIRE MILLS

DALTON, MASS., U.S.A.

One party writes: 'The two hundred RECORD BOOKS, for 83 of the 99 Counties, now on exhibition at the Iowa State Fair, at Des Moines; and all, but four (!) of them, made from your 'OLD BERKSHIRE MILLS LINEN LEDGER,' Medium, 40lb., make a splendid show."

[The above cut is a fac-simile of the wrapper used on the Linen Ledger Paper.]

We will pay for any book rejected on account of fault in the paper. Send for Samples, test them in comparison, and see that your books are made from paper thus water-marked.

OLD BERKSHIRE MILLS **LINEN LEDGER PAPER** Will stand the severest test of COLOR, CLIMATE, INK OR WEAR.

Being **Triple Sized** (a process entirely our own) and **Loft Dried**, can be erased and written upon the fifth time distinctly. None genuine without the water-mark and date, thus—**Old Berkshire Mills Linen Ledger, 1881.**
